

## Compute coverage

```
coverage("a.bam") %>% GRanges()
```

What is an  
RleList? And a  
GRanges?

## Select zero runs

```
subset(score > 0)
```

Why does this work?  
Inheritance? I have to  
understand the entire  
class hierarchy?

## Find intersection with regions

```
intersect(import("b.bed"))
```

Imported as  
what?
