Package ‘MotIV’

March 23, 2017

Type Package
Title Motif Identification and Validation
Version 1.30.0
Date 2014-04-09
Author Eloi Mercier, Raphael Gottardo
Maintainer Eloi Mercier <emerrier@bcgsc.ca>, Raphael Gottardo
<rgottard@fhcrc.org>
Depends R (>= 2.10), BiocGenerics (>= 0.1.0)
Imports graphics, grid, methods, S4Vectors, IRanges (>= 1.13.5),
Biostrings (>= 1.24.0), lattice, rGADEM, utils
Suggests rtracklayer
SystemRequirements GNU Scientific Library >= 1.6

Description

This object contains the alignments found by a MotIV analysis.

Objects from the Class

Objects can be created by calls of the form new("alignments", TF, evalue, sequence, match, strand).

Slots

- **TF**  Object of class "TF"
- **evalue**  The e-value of the alignment.
- **sequence**  The input sequence aligned.
- **match**  The TF sequence which has been matched.
- **strand**  The strand of the alignment.

Coerce to a Data Frame

Description

This function coerces a MotIV object into a data frame.

Usage

## S4 method for signature 'motiv'
as.data.frame(x)

Arguments

x
An object of class motiv.

Details

'as.data.frame' returns a data frame.

This object regroups all the TF identified by MotIV with the corresponding evalue and alignments.

Value

A data.frame object.

**combineMotifs**

**Description**

This function combines motifs according to a set of filters.

**Usage**

```r
## S4 method for signature 'motiv,filters'
combineMotifs(x, y, name=NULL, exact=TRUE, verbose=TRUE)
```

**Arguments**

- `x`: An object of class `motiv`.
- `y`: A filter or a set of filter.
- `name`: Name(s) to be given for similar motifs.
- `verbose`: If `FALSE`, no output will be print.
- `exact`: If `TRUE`, search only for perfect name match.

**Details**

This function is used to consider some motifs as a unique motif or similar motifs.

Many filters could be pass in argument separated by coma. They will be considered independently (coma is considered as OR).

If a name or a vector of name is provided, it will be used to assign new name for similar motif to the corresponding filter. Else, a generic name is used.

**Value**

A `motiv` object.

**exportAsTransfacFile**  Write Transfac Files

**Description**

Export an object of class `motiv` as a Transfac file type.

**Usage**

```r
## S4 method for signature 'motiv'
exportAsTransfacFile(x, file)
## S4 method for signature 'list'
exportAsTransfacFile(x, file)
```

**Arguments**

- `x` An object of class `motiv` to be export.
- `file` A character string naming a file.

**Details**

This function is made to provide standard output file used by STAMP. It take an object of class `motiv` and write two files named `<*_matched.txt>` and `<*_match_pairs.txt>` containing alignments and identified PWMs.

For more information about the Transfac file format, please refer to [http://www.benoslab.pitt.edu/stamp/help.html](http://www.benoslab.pitt.edu/stamp/help.html).

Description

This function selects motifs according to a set of filters.

Usage

## S4 method for signature 'motiv,filters'
filter(x, f, exact=NULL, verbose=TRUE)

Arguments

- **x**: An object of class motiv.
- **f**: A filter or a set of filter for motiv object.
- **verbose**: If FALSE, no output will be print.
- **exact**: If TRUE, search only for perfect name match.

Details

This function is used to select motifs that correspond to the filters.

Many filter could be pass in argument separated by coma. They will be considered independently.

Value

A motiv object.
filter-class

Class "filter"

Description

This object information to be apply as filter.

Details

This class filter is used to selected motiv objects according the filter’s arguments.

Objects from the Class

Objects can be created by calls of the form `new("filter", name, tfname, top, evalueMax, lengthMax, valid).

Slots

- `name` A name or a list of names.
- `tfname` A transcription factor name or a list of TF names.
- `evalueMax` An e-value between 0 and 1.
- `top` Defined the depth of the filter.
- `lengthMax` The maximum motif length.
- `valid` The alignment that should be considered as valid.

**generateDBScores**  

*Database Scores Functions*

**Description**

This functions are used to generate scores of a PWM database.

**Usage**

```r
generateDBScores(inputDB, cc="PCC", align="SWU", nRand=1000, go=1, ge=0.5)
readDBScores(file)
writeDBScores(x, file)
```
**Arguments**

- **inputDB**: A list of PWM corresponding to the database.
- **cc**: The metric name to be used.
- **align**: The Alignment method to be used.
- **go**: Gap open penalty.
- **ge**: Gap extension penalty.
- **nRand**: The number of random PWM to be generated. The more higher it is, the more accurate score will be.
- **file**: A character string naming a file.
- **x**: A numeric matrix corresponding to a score.

**Details**

The score reflects the bias of the database. It is used to compute more precisely e-value alignments.

*generateDBScores*: Based on database properties (suchs as length, zero rate, invariant columns), nRand matrix are generated. A score is calculated for each matrix length with the specified alignment method and metric.

The score is associated to a database and a alignment method and metric so you don’t have to generate it each time you use the same database. Use the `writeDBScores` and `readDBScores` instead. `readDBScores`: Read a score file. `writeDBScores`: Write a score file.

**Value**

A numeric matrix. Columns correspond respectively to the first matrix length, second matrix length, variance, mean, matrix number, distance min and max.

**Warning**

Because of each matrix is compare to each other, computing time is exponential. You should be aware of this fact before provided a high nRand. 5000 is a good time/accuracy rate choice.

jaspar2010, Jaspar 2010 Database

Description
Jaspar database and Jaspar score.

Usage
jaspar
jaspar.scores

details
Jaspar is a well-known transcription factor database. Version 2010 contains 130 non-redundant matrix of TF binding sites.
The Jaspar scores have been computed with Pearson Correlation Coefficient and Smith-Waterman Ungapped alignments.

*Constructing a pwm object*

**Description**

This function constructs an object of class pwm from a matrix. It checks that the matrix has correct dimensions and that columns add up to 1.0.

**Usage**

`makePWM(pwm, alphabet="DNA")`

**Arguments**

- `pwm`  
  Matrix representing the position weight matrix

- `alphabet`  
  Character the alphabet making up the sequence. Currently, only "DNA" is supported.

**Value**

An object of class pwm.

*Class "matches"*

**Description**

This object contains the name of the input motif and all the matches found.

**Objects from the Class**

Objects can be created by calls of the form `new("matches", name, aligns, similarity, valid)`.

**Slots**

- `name` Motif name.
- `aligns` Alignments found by `motifMatch`.
- `similarity` The optional name given to the motif.
- `valid` The alignment that should be considered as valid.

motifDistances  Clustering PWMs Computation

Description
Set of functions to perform clustering of PWMs.

Usage
motifDistances(inputPWM, DBscores=jaspar.scores, cc="PCC", align="SWU", top=5, go=1, ge=0.5)
motifHclust(x,...)
motifCutree(tree,k=NULL, h=NULL)

Arguments
inputPWM, DBscores, cc, align, top, go, ge
  Option for the PWMs distances computation. Refer to motifMatch.

x,...
  Arguments to pass to the hclust function. See hclust.

tree, k, h
  Arguments to pass to the cutree function. See cutree.

Details
This function are made to perform motifs clustering.

The ‘motifDistances’ function computes the distances between each pair of motifs using the specified alignment.

The ‘motifHclust’ and ‘motifCutree’ functions are simple redefinition of ‘hclust’ and ‘cutree’.

### motifMatch  Motifs Matches Analysis ####

**Description**

Search for motifs matches corresponding to PWM.

**Usage**

```r
motifMatch(inputPWM, database=jaspar, DBscores=jaspar.scores, cc="PCC", align="SWU", top=5, go=1, ge=0.5)
```

**Arguments**

- `inputPWM`: A list of PWM.
- `database`: A list of PWM corresponding to the database.
- `DBscores`: A matrix object containing the scores associated to the database.
- `cc`: The metric name to be used.
- `align`: The Alignment method to be used.
- `top`: The number of identified transcription factors per motif.
- `go`: Gap open penalty.
- `ge`: Gap extension penalty.

**Details**

For a set of PWMs given by `inputPWM`, this function realizes alignments with each motif of the database and returns the top best motifs. If no database is provided, the function will use jaspar by loading data(jaspar2010). If no DBscores is given, jaspar.scores from data(jaspar2010_scores) will be used.

The e-value is computed according the metric name cc and is corrected by the DBscores.

Motifs Occurrences and Co-occurrences

Description
Get the number of motifs occurrences and co-occurrences from a rGADEM object.

Usage
occurrences(gadem)
cooccurrences(x)

Arguments
gadem An object of type rGADEM.
x A contingency table.

Value
occurrences returns the contingency table of the number of motifs per sequences.
This object can be put in cooccurrences to return the number of sequences where two motifs appear together.

plot-methods

Plot Motiv

Description
This functions are used to visualise and validate motif analysis.

Usage
## S4 method for signature 'motiv,ANY'
plot(x, y=NULL, main=NULL, sub=NULL, ncol=0, nrow=0, top=3, bysim=TRUE, rev=FALSE, trim=0.05, cex)

## S4 method for signature 'motiv,gadem'
plot(x, y, sort=FALSE, group=FALSE, main=NULL, sub=NULL, ncol=0, nrow=0, xlim=NULL, correction=TRUE, ... col=c("blue", "red"), border=c("black", "black"), lwd=2, lty=1, nclass=20, bw="nrd0", cex=1, vcol=c("red", "green"))
Arguments

x  An object of class motif.

y  The GADEM type object associated with the motif object.

ncol, nrow  A numeric value giving the the number of columns and rows to plot.

top  A numeric value giving the number of best matches per motif to display.

rev  A logical value. If TRUE, print reverse motif for negatif strand.

main  An overall title for the plot: see title.

sub  A sub title for the plot: see 'title'

type  What type of plot should be drawn. Possible values are: distribution to display the binding sites distribution within the peaks or distance to show the pairwise distance between motifs.

strand  If TRUE, distribution will be plot for both forward and reverse strand.

group  If TRUE, similar motifs will be grouped.

sort  If TRUE, motifs will be plot according their computed variance.

bysim  If TRUE, the 'similar' field (defined with the combine function) will be print instead of the original name.

xlim  A numeric vectors of length 2, giving the x coordinates ranges.

correction  If TRUE, corrects the position according to the alignment.

trim  A numeric value. Define the miminum information content value for which the logo letters are shown.

col, border, lwd, lty  Define respectively the color, the border, the line wide and the line type of both curve and histogram. See 'par'.

nclass  A numerical value giving the number of class for the histogram.

bw  he smoothing bandwidth to be used to calculate the density. See density.

cex, vcol  A numerical value giving the amount by which plotting text should be magnified relative to the default.

Details

A single motif object (usualy provied by motifMatch) will plot the list of identified transcription factors for each motif. With rev=TRUE, the transcription factor logo will be print to correspond to the real alignment instead of original TF PWM.

Giving a motif object and a gadem object with type="distribution" will show the motif repartition within gadem peaks. If strand=TRUE, a distinct distribution is made for forward and reverse strand.

A var.test is automatically made to help to distinguish centered distribution. The distribution with lowest variance is assign as "reference" distribution to compute the var.test statistic. With sort=TRUE, distribution are plot according decreasing statistic.

type="distance" indicates to compute and plot the distance between each pair of motif. It aslo provied Venn diamm that returns the proportion of common sequences per pair of motif.

The group argument indicates to consider similar motif as a single motif.

With correction=TRUE the motif position is corrected accoring to the alignment. It means that the gap/"N" contained in the alignments are removed to give a corrected start and end position.

**readGademPWMFile**

**Read Gadem File**

**Description**

This function is use to read a gadem file containing PWM.

**Usage**

`readGademPWMFile(file)`

**Arguments**

- `file` 
  File’s name.

**Details**

This function is made to read typicaly output file from Gadem (v1.2). Standard name is ‘observed-PWMs.txt’.

**Author(s)**

Eloi Mercier <<emercier@chibi.ubc.ca>>
Examples

#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path,"/extdata/jaspar2010.txt",sep=""))
jaspar.scores <- readDBScores(paste(path,"/extdata/jaspar2010_PCC_SWU.scores",sep=""))

#####Input#####
data(FOXA1_rGADEM)
motifs <- getPWM(gadem)
motifs.trimed <- lapply(motifs,trimPWMedge, threshold=1)

---

**readPWMfile**  
*Read Transfac File*

**Description**

This function is use to read standard Transfac type file.

**Usage**

```r
readPWMfile(file)
```

**Arguments**

- `file`  
  Transfac file's name.

**Details**

This function is designed to read standard Transfac type file. For more information about the format, please refere to [http://mcast.sdsc.edu/doc/transfac-format.html](http://mcast.sdsc.edu/doc/transfac-format.html)

**Value**

A list of matrix.

**Author(s)**

Eloi Mercier <<emercier@chibi.ubc.ca>>

**Examples**

#####Database and Scores#####
path <- system.file(package="MotIV")
jaspar <- readPWMfile(paste(path,"/extdata/jaspar2010.txt",sep=""))
jaspar.scores <- readDBScores(paste(path,"/extdata/jaspar2010_PCC_SWU.scores",sep=""))
seqLogo2

Plot a sequence logo for a given position weight matrix

Description
This function takes the 4xW position weight matrix of a DNA sequence motif and plots the corresponding sequence logo.

Usage
seqLogo2(pwm, ic.scale=TRUE, xaxis=TRUE, yaxis=TRUE, xfontsize=15, yfontsize=15,vmargins=c(0,0),hmargins=c(0,0),size=1, trim=0)

Arguments
- pwm numeric The 4xW position weight matrix.
- ic.scale logical If TRUE, the height of each column is proportional to its information content. Otherwise, all columns have the same height.
- xaxis logical If TRUE, an X-axis will be plotted.
- yaxis logical If TRUE, a Y-axis will be plotted.
- xfontsize numeric Font size to be used for the X-axis.
- yfontsize numeric Font size to be used for the Y-axis.
- vmargins numeric Vertical margins.
- hmargins numeric Horizontal margins.
- size numeric Graphic size.
- trim numeric Print nucleotide only if the information content is superior to this trim threshold.

Details
Within each column, the height of a given letter is proportional to its frequency at that position. If ic.scale is TRUE, the height of each column in the plot indicates the information content at that position of the motif. Otherwise, the height of all columns are identical.

This is an internal function for the package MotIV. User should prefer the seqLogo function from the package seqLogo to visualize individual motif.

Value
None.

Author(s)
Oliver Bembom, <bembom@berkeley.edu>, modified by Eloi Mercier <emercier@chibi.ubc.ca>

Examples
#mFile <- system.file("Exfiles/pwm1", package="seqLogo")
#m <- read.table(mFile)
#pwm <- makePWM(m)
#seqLogo2(pwm)
setFilter

Set Motif Filter

Description

This function is used to set a motif filter.

Usage

```r
setFilter(name = "", tfname = "", evalueMax = 1, top = 10, lengthMax = 100, valid = NULL)
```

Arguments

- `name`: A name or a list of names.
- `tfname`: A transcription factor name or a list of TF names.
- `evalueMax`: An evalue between 0 and 1.
- `top`: Defines the depth of the filter.
- `lengthMax`: The maximum motif length.
- `valid`: The alignment that should be considered as valid.

Value

A filter object.

split-methods

Split Motiv Object

Split Motiv Object

Description

This function splits a `motiv` object according to filters.

Usage

```r
# S4 method for signature 'motiv, filters'
split(x, f, exact=TRUE, drop=FALSE, verbose=TRUE, ...)
```

Arguments

- `x`: An object of class `motiv` (usually provided by `motifMatch`).
- `f`: A filter or a set of filters for `motiv` object.
- `drop`: If `TRUE`, no match motifs will be dropped.
- `verbose`: If `FALSE`, no output will be printed.
- `exact`: If `TRUE`, search only for perfect name match.
- `...`: Further potential arguments passed to methods.

Details

This function is used to split motifs that correspond to the filters.

Many filters could be passed in arguments separated by commas. They will be considered independently (comma is considered as OR).

Value

A list of `motiv` objects.

**transcriptionFactor-class**

*Transcription Factor Class*

---

**Description**

This object contains the Transcription Factor name and PWM.

**Objects from the Class**

Objects can be created by calls of the form `new("transcriptionFactor", name, pwm)`.

**Slots**

- `name`: TF name.
- `pwm`: TF PWM.

Trim PWM edge

Description
This function is used to cut edges with low information content.

Usage
trimPWMedge(x, threshold=1)

Arguments

- x: A matrix representing a PWM.
- threshold: A transcription factor name or a list of TF names.

Value
A PWM.
