Package ‘Pviz’

March 23, 2017

Type Package

Title Peptide Annotation and Data Visualization using Gviz

Version 1.8.0

Author Renan Sauteraud, Mike Jiang, Raphael Gottardo

Maintainer Renan Sauteraud <rsautera@fhcrc.org>

Description Pviz adapts the Gviz package for protein sequences and data.

License Artistic-2.0

Depends R(>= 3.0.0), Gviz(>= 1.7.10)

Imports biovizBase, Biostrings, GenomicRanges, IRanges, data.table, methods

Suggests knitr, pepDat

biocViews Visualization, Proteomics, Microarray

VignetteBuilder knitr

NeedsCompilation no

Index 9
**ATrack**

**ATrack class**

**Description**

This class contains Gviz’s AnnotationTrack and adds default values to the genome and chromosome slot.

**Usage**

```r
ATrack(range = NULL, start = NULL, end = NULL, width = NULL, group, id,
stacking = "squish", name = "ATrack", fun, selectFun, ...)
```

**Arguments**

- `range`, `start`, `end`, `width`, `group`, `id`, `stacking`, `name`, `fun`, `selectFun`, ...
  - Arguments to be passed to `AnnotationTrack`.

**Author(s)**

Renan Sauteraud

**See Also**

`AnnotationTrack`, `GdObject`

**Examples**

```r
# Object construction
aTrack <- ATrack(start = c(20, 60), end = c(40, 100), name = "random.anno",
id=c("small","big"))
```

**CladeTrack**

**CladeTrack**

**Description**

This track can be used to display the result of pepStat analysis for a single clade. It contains DTrack.

**Usage**

```r
CladeTrack(restab, clade, name = clade, ...)
```
DTrack

Arguments

restab A data.frame. The result of a peptide microarray analysis, as returned by pepStat's restab function.

clade A character. The clade to plot.

name A character. The name of the track, used in the title panel when plotting. By default, the clade name.

... Additional argument to be passed to DataTrack. They will be treated as display parameters.

Slots

clade A character. The clade to display.

DTrack

Examples

if(require(pepDat)){
  data(restab)
  ct <- CladeTrack(restab, clade = "M", type = "l", legend = TRUE)
  plotTracks(ct)
}

DTrack

DTrack class

Description

This class contains Gviz's DataTrack and adds default values to the genome and chromosome slot

Usage

DTrack(range = NULL, start = NULL, end = NULL, width = NULL, data, name = "DTrack", ...)

Arguments

range, start, end, width, data, name,...

Arguments to be passed to DataTrack.

Details

Refer to DataTrack for details regarding the constructor.
Author(s)
Renan Sauteraud

DataTrack, GdObject

Examples
if(require(pepDat)){
  data(restab)
  plot_clade(restab, clade = c("A", "M"))
}
plot_inter  

**Description**  
Plot an axis and the frequency of response of each group, averaged by peptides at each position.

**Usage**  
```
plot_inter(restab, sequence = NULL, from = 0, to = max(restab$position), ...)
```

**Arguments**  
- `restab`: A `data.frame`. The result of a peptide microarray analysis, as returned by `pepStat`'s `restab` function.
- `sequence`: A character or an AAString. If not NULL, the sequence of the `ProteinSequenceTrack` to plot. It should be the sequence of the reference genome used in the `peptideSet` that generated the `restab`.
- `from`: A numeric, the start coordinate of the plot.
- `to`: A numeric, the end coordinate of the plot.
- `...`: Additional arguments to be passed to `plotTracks`.

**Author(s)**  
Renan Sauteraud

**See Also**  
`restab`, `plot_clade`, `plotTracks`

**Examples**  
```
if(require(pepDat)){
  data(restab_aggregate)
  plot_inter(restab_aggregate)
}
```

---

**ProbeTrack**

**Description**  
This track can be used to display the frequency of antibody binding for each probe on an array as predicted by `pepStat`'s function `makeCalls`.

**Usage**  
```
ProbeTrack(sequence, intensity, probeStart, restab = NULL, group = NULL, 
    name = "ProbeTrack", ...)
```
Arguments

sequence  A character vector. The sequence of peptides to display.
intensity  A numeric vector. The frequency of binding or the baseline corrected intensity for the peptides.
probeStart  A numeric vector. The start position of the peptides.
name  A character. The name of the track used in the title panel when plotting
restab  A data.frame containing all the above parameters, as outputted by pepStat’s restab function.
group  A character. The group to display on the ProbeTrak. This is only required when restab is not NULL. See details section for more information.
...  Arguments to be passed to DataTrack.

Details

The vectors for the arguments sequence, freq and probeStart should be of the same length. If restab is provided, the three previous arguments will be ignored and group must be specified. group must be a valid column name in restab, data.frame.

Slots

sequence  A character vector. The probes sequence.
probeStart  A numeric vector. The start position of the probes.
intensity  A numeric vector. The frequency of response of each probe. Or the baseline corrected intensity of the signal.

restab

Examples

if(require(pepDat)){
data(restab)
pt <- ProbeTrack(sequence = restab$peptide,
                  intensity = restab$group2,
                  probeStart = restab$start)
plotTracks(pt)
plotTracks(pt, from = 460, to = 560, legend=TRUE)
}
ProteinAxisTrack

Description
A track to display an axis for protein or peptide sequences.

Usage
ProteinAxisTrack(range = NULL, name = "Axis", addNC = FALSE, id = NULL, ...)

Arguments
range, name, id, ...
Arguments to be passed to GenomeAxisTrack.
addNC A logical. If TRUE, display the Amino-terminal and Carboxyl-terminal ends on the axis.

GenomeAxisTrack

Examples
# Object construction
paxTrack <- ProteinAxisTrack()
pax2 <- ProteinAxisTrack(addNC=TRUE)
pax3 <- ProteinAxisTrack(littleTicks=TRUE)
# Plotting
plotTracks(c(paxTrack, pax2, pax3), from=1, to=100)

ProteinSequenceTrack

Description
A track to display peptides and protein sequences.

Usage
ProteinSequenceTrack(sequence = NULL, name = "Sequence", ...)

Arguments
sequence A character or AAString of length one. The sequence to display.
name A character. The name of the track used in the title panel when plotting.
... Additional items which will all be interpreted as display parameters.

SequenceTrack, DisplayPars

Examples

if(require(pepDat)){
data(pep_hxb2)
hxb2_seq <- metadata(pep_hxb2)$sequence
st<-ProteinSequenceTrack(sequence=hxb2_seq, name="env")

# Plotting amino acids
plotTracks(st, to = 20)

# When the range becomes wider, only coloured squares are displayed
plotTracks(st, to = 100)

# When overplotting, a single line will mark the ProteinSequenceTrack
plotTracks(st)
}
