Package ‘RCytoscape’
March 23, 2017

Type Package
Title Display and manipulate graphs in Cytoscape
Version 1.24.1
Date 2016-10-20
Author Paul Shannon
Maintainer Paul Shannon <pshannon@systemsbiology.org>
Depends R (>= 2.14.0), graph (>= 1.31.0), XMLRPC (>= 0.2.4)
Imports methods, XMLRPC, BiocGenerics
Suggests RUnit
Description Interactive viewing and exploration of graphs, connecting
R to Cytoscape.
License GPL-2
URL http://rcytoscape.systemsbiology.net
LazyLoad yes
biocViews Visualization, GraphAndNetwork, ThirdPartyClient
NeedsCompilation no

Description

Given a CytoscapeWindow containing a (possibly empty) graph, this method adds a edge. Edge attributes are added separately, via successive calls to sendEdgeAttributesDirect. The two nodes must already exist in the Cytoscape network.

Usage

addCyEdge(obj, sourceNode, targetNode, edgeType, directed)

Arguments

- **obj**: a CytoscapeWindowClass object.
- **sourceNode**: a character string object.
- **targetNode**: a character string object.
- **edgeType**: a character string object.
- **directed**: a boolean object.

Value

None.

Author(s)

Paul Shannon

See Also

sendEdgeAttributesDirect addCyNode
addCyNode

Examples

```r
window.name <- 'demo addCyEdge'
cw <- new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
displayGraph (cw)
directed = TRUE
addCyEdge (cw, 'A', 'B', 'synthetic rescue', directed)
redraw (cw)
layoutNetwork(cw)
```

Description

Given a CytoscapeWindow containing a (possibly empty) graph, this method adds a node. Node attributes are added separately, via successive calls to sendNodeAttributesDirect. The new node must be unique – not already a member of the graph as known to Cytoscape.

Usage

```r
addCyNode(obj, nodeName)
```

Arguments

- `obj` a CytoscapeWindowClass object.
- `nodeName` a character string object.

Value

None.

Author(s)

Paul Shannon

See Also

sendNodeAttributesDirect addCyEdge

Examples

```r
window.name <- 'demo addCyNode'
cw <- new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
displayGraph (cw)
addCyNode (cw, 'A NEW NODE')
redraw (cw)
layoutNetwork(cw)
```
**addGraphToGraph**

**Description**

Given a CytoscapeWindow containing a graph, this method adds new nodes, edges, and their attributes. Thus, it is the way to extend a graph – to merge a new graph with an existing one. A typical use would be to add a second KEGG pathway to a CytoscapeWindow upon discovering that two KEGG pathways overlap, sharing some enzymes and some reactions. No existing attributes are written over.

**Usage**

```r
addGraphToGraph(obj, other.graph)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.
- `other.graph` a graph object.

**Value**

None.

**Author(s)**

Paul Shannon

**Examples**

```r
window.name <- 'demo addGraphToGraph'
cw3 <- new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
displayGraph (cw3)
redraw (cw3)
layoutNetwork(cw3)

# create a new graph, which adds two nodes, and edges between them
# and an existing node, A

g2 <- new("graphNEL", edgemode = "directed")
g2 <- graph::addNode ('A', g2)
g2 <- graph::addNode ('D', g2)
g2 <- graph::addNode ('E', g2)

g2 <- initNodeAttribute (g2, "label", "char", "default node label")
g2 <- initEdgeAttribute (g2, "edgeType", "char", "unspecified")
g2 <- initEdgeAttribute (g2, "probability", "numeric", 0.0)

nodeData (g2, 'D', 'label') <- 'Gene D'
nodeData (g2, 'E', 'label') <- 'Gene E'
g2 <- graph::addEdge ('D', 'E', g2)
```
clearMsg

g2 <- graph::addEdge ('A', 'E', g2)

edgeData (g2, 'D', 'E', 'probability') <- 0.95
edgeData (g2, 'D', 'E', 'edgeType') <- 'literature'
edgeData (g2, 'A', 'E', 'edgeType') <- 'inferred'

addGraphToGraph (cw3, g2)
redraw (cw3)
layoutNetwork(cw3)

description

Clears any current message in the Cytoscape Desktop status bar.

Usage

clearMsg(obj)

Arguments

obj a CytoscapeConnectionClass object.

Value

Nothing.

Author(s)

Paul Shannon

See Also

msg

Examples

cy <- CytoscapeConnection ()
clearMsg (cy)
clearSelection

description
If any nodes are selected in the current Cytocape window, they will be unselected.

Usage
clearSelection(obj)

Arguments
obj a CytoscapeWindowClass object.

Value
Nothing

Author(s)
Paul Shannon

Examples

cw<- CytoscapeWindow('clearSelection.test', graph=makeSimpleGraph())
displayGraph(cw)
selectNodes(cw, 'A')
print (getSelectedNodeCount (cw)) # should be 1
clearSelection (cw)
print (getSelectedNodeCount (cw)) # should be 0

--
copyVisualStyle

description
Once you have designed a visual style, you may wish to duplicate it, perhaps in preparation for adding further mapping rules. Another scenario arises when style rules have been added to the 'default' style, and you wish to create a Cytoscape session file with your current network and this default style. However, the default style is not saved into a session, only explicitly named styles are. Use this method to achieve this.

Usage
copyVisualStyle(obj, from.style, to.style)
copyVisualStyle

Arguments

- `obj` a CytoscapeConnectionClass object or CytoscapeWindow object.
- `from.style` a character string specifying the name of an existing style you wish to copy
- `to.style` a character string, the name of an as yet non-existent style

Value

Nothing.

Author(s)

Paul Shannon

See Also

getVisualStyleNames setVisualStyle

Examples

```r
# create the usual demo graph and Cytoscape window, then
# specify that all the edges should be 5 pixels wide. This affects the 'default' style only
# in order to save this style for later use, copy it to a
# new style named 'fatEdgeStyle'
# the related method 'setVisualStyle' must be called in order for
# the fatEdgestyle to be associated with this window (and saved
# into the CytoscapeSession file from the Cytospace application's
# File menu)

window.name = 'demo.copyVisualStyle'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
setDefaultEdgeLineWidth (cw, 5);
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)

# create a unique style name, using millisecond precision, so should be unique
time.msec = proc.time()[['elapsed']]
new.unique.style.name = paste ('fatEdgeStyle', time.msec, sep='.')
copyVisualStyle (cw, 'default', new.unique.style.name)
new.names = getVisualStyleNames (cw)
setVisualStyle (cw, new.unique.style.name)

# save the session form the Cytoscape application menu. the new
# style name will be saved along with the network and its attributes
```
createWindow

Description
Request that Cytoscape create a new window for the supplied CytoscapeWindowClass object. It will hold a new network, using the title supplied when the object’s constructor was called.
This method will probably not often be useful: it is called behind the scenes by the CytoscapeWindow constructor unless you specify (in calling the constructor) ‘create.window=FALSE’. In that case, or if you interactively delete the window in Cytoscape, or if you call the ‘destroyWindow’ or ‘destroyAllWindows’ methods, you can create a new window by calling this method.

Usage
createWindow(obj)

Arguments
obj
a CytoscapeWindowClass object.

Value
Nothing.

Author(s)
Paul Shannon

createWindowFromSelection

Description
All selected nodes, their connecting edges, and associated attributes are copied into a new CytoscapeWindow, with the supplied title.

Usage
createWindowFromSelection(obj, new.windowTitle, return.graph)

Arguments
obj
a CytoscapeWindowClass object.
new.windowTitle
a String.
return.graph
a logical object.
cy2.edge.names

Value
A new CytoscapeWindow object, with the graph slot populated with the new selected subgraph, if requested. If not requested, the graph slot holds an empty graph.

Author(s)
Paul Shannon

See Also
selectNodes

Examples

```r
cy <- CytoscapeConnection()
title <- 'createWindowFromSelection demo'
cw <- new.CytoscapeWindow(title, makeSimpleGraph())
displayGraph(cw)
redraw(cw)
layoutNetwork(cw)
selectNodes(cw, c('A', 'C'))

new.window.title <- 'NEW WINDOW'
if (new.window.title %in% as.character(getWindowList(cy)))
  deleteWindow(cy, new.window.title)
c2 <- createWindowFromSelection(cw, new.window.title, TRUE)
redraw(c2)
layoutNetwork(c2)

clearSelection(c2)
selectNodes(c2, 'C')
print(getSelectedNodeCount(c2))  # should be 1
```

Description
Bioconductor graph edges are named, i.e., A~B. The same edge in the Cytoscape domain would be 'A (<edgeType>) B', where '<edgeType>' might be 'phosphorylates' or 'represses'.

Usage
cy2.edge.names(graph, R.edge.names=NA)

Arguments
graph An R graph
R.edge.names one or more R graph-style edge names. default NA, in which case all edges in the graph are translated to cy2-style.
Value

A named list, in which Cytoscape edges names are the content, and bioc graph edge names are their names.

Author(s)

Paul Shannon

Examples

```r
# CytoscapeConnection Example

g <- makeSimpleGraph()
cy2.edge.names(g)
  # A~B    B~C    C~A
  # "A (phosphorylates) B" "B (synthetic lethal) C" "C (undefined) A"
cy2.edge.names(g, R.edge.names="B~C")
  # B~C
  # "B (synthetic lethal) C"
```

Description

The constructor for the CytoscapeConnectionClass. This class is both the base class for CytoscapeWindow objects, and quite usefully, and instantiable object in its own right. It is very useful for calling the many RCytoscape methods which do not address a single window in particular: getWindowList, getWindowCount, deleteWindow, getNodeShapes, etc.

Usage

```r
CytoscapeConnection (host = "localhost", rpcPort = 9000)
```

Arguments

- `host`: Defaults to 'localhost', this is the domain name of a machine which is running Cytoscape with the appropriate XMLRPC server plugin.
- `rpcPort`: Defaults to 9000, this may be any port to which the CytoscapeRPC server is listening.

Value

An object of the CytoscapeConnection Class.

Author(s)

Paul Shannon

Examples

    # create a CytoscapeConnectionClass object by calling the constructor
cy <- CytoscapeConnection (host='localhost', rpcPort=9000)

CytoscapeWindow  CytoscapeWindow

Description

The constructor for the CytoscapeWindowClass

Usage

CytoscapeWindow(title, graph = new("graphNEL", edgemode='directed'),
    host = "localhost", rpcPort = 9000,
    create.window = TRUE, overwriteWindow=FALSE, collectTimings=FALSE)

Arguments

title  A character string, this is the name you will see on the Cytoscape network window. Multiple windows with the same name are not permitted.

graph  A Bioconductor graph.

host  Defaults to 'localhost', this is the domain name of a machine which is running Cytoscape with the appropriate XMLRPC server plugin.

rpcPort  Defaults to 9000, this may be any port to which the CytoscapeRPC server is listening.

create.window  Defaults to TRUE, but if you want a CytoscapeWindow just to call what in Java we would call 'class methods' – getWindowList () for instance, a CytoscapeWindow without an actual window can be useful.

overwriteWindow  Every Cytoscape window must have a unique title. If the title you supply is already in use, this method will fail unless you specify TRUE for this parameter, in which case the pre-existing window with the same title will be deleted before this new one is created.

collectTimings  Default FALSE. Will record and report the time required to send a graph to Cytoscape.
**Value**

An object of the CytoscapeWindow Class.

**Author(s)**

Paul Shannon

**See Also**

CytoscapeWindow existing.CytoscapeWindow, predictTimeToDisplayGraph

**Examples**

```r
cw <- CytoscapeWindow ('new.demo', new ('graphNEL'))
```

---

**CytoscapeWindowClass-class**

*Class “CytoscapeWindowClass”*

**Description**

A class providing access to the Cytoscape application.

**Slots**

- title: An attrData the name of the window.
- window.id: An attrData Cytoscape’s identifier.
- graph: An attrData a graph instance.
- collectTimings: An logical object.
- uri: An attrData the address of the Cytoscape XMLRPC server.

**Methods**

- createWindow
- destroyWindow
- destroyAllWindows
- displayGraph
- firstNeighbors
- getArrowShapes
- getLayoutNames
- getLineStyles
- getNodeShapes
- getWindowCount

**Author(s)**

Paul Shannon
deleteAllWindows

Examples

# create a CytoscapeWindowClass object by calling the constructor
c2 <- CytoscapeWindow ('cwc demo', makeSimpleGraph ())

deleteAllWindows

description

Delete all the network windows currently held by Cytoscape, removing them from the screen, and deleting Cytoscape’s copy of all of the graphs. The R graphs are unchanged.

Usage

deleteAllWindows(obj)

Arguments

obj

a CytoscapeConnectionClass object.

Value

Nothing.

Author(s)

Paul Shannon

Examples

cy <- CytoscapeConnection ()
cw1 = new.CytoscapeWindow ('cw1')
cw2 = new.CytoscapeWindow ('cw2')
deleteAllWindows (cy)

deddeleteEdgeAttribute
delteEdgeAttribute

Description

Node and edge attributes are usually added to a Cytoscape network by defining them on the graph used to construct a CytoscapeWindow. Once Cytoscape has been passed an attribute, however, it persists until you exit the application or delete it – using the Cytoscape graphical user interface, or by calling this method.

Usage

deleteEdgeAttribute(obj, attribute.name)
**deleteNodeAttribute**

**Arguments**

- **obj** a CytoscapeConnectionClass object or CytoscapeWindow object.
- **attribute.name** a character string, the name of the attribute you wish to delete.

**Value**

nothing

**Author(s)**

Paul Shannon

**See Also**

getEdgeAttributeNames addEdgeAttribute deleteNodeAttribute

**Examples**

```python
window.name = 'demo.deleteEdgeAttribute'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
setDefaultEdgeLineWidth (cw, 5);
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)

print (paste ("before: ", getEdgeAttributeNames (cw)))
deleteEdgeAttribute (cw, 'score')
print (paste ("after: ", getEdgeAttributeNames (cw)))
```

**Description**

Node and node attributes are usually added to a Cytoscape network by defining them on the graph used to construct a CytoscapeWindow. Once Cytoscape has been passed an attribute, however, it persists until you exit the application or delete it – using the Cytoscape graphical user interface, or by calling this method.

**Usage**

deleteNodeAttribute(obj, attribute.name)

**Arguments**

- **obj** a CytoscapeConnectionClass object or CytoscapeWindow object.
- **attribute.name** a character string, the name of the attribute you wish to delete.
deleteSelectedEdges

Value

nothing

Author(s)

Paul Shannon

See Also

g getNodeAttributeNames addNodeAttribute

Examples

```r
window.name = 'demo.deleteNodeAttribute'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)

print (paste ('before: ', getNodeAttributeNames (cw)))
deleteNodeAttribute (cw, 'count')
print (paste ('after: ', getNodeAttributeNames (cw)))
```

Description

In Cytoscape, remove all selected edges. These edges will still exist in the corresponding R graph until you delete them there as well.

Usage

deselectSelectedEdges(obj)

Arguments

obj

a CytoscapeWindowClass object.

Value

None.

Author(s)

Paul Shannon

See Also

selectEdges cy2.edge.names deleteSelectedNodes
deleteSelectedNodes

Description

In Cytoscape, delete all the selected nodes. Edges originating or terminating in these nodes will be deleted also. The nodes will still exist in the corresponding R graph until you explicitly delete them there as well.

Usage

deleteSelectedNodes(obj)

Arguments

obj a CytoscapeWindowClass object.

Value

None.

Author(s)

Paul Shannon

See Also

selectNodes deleteSelectedEdges

Examples

cw <- new.CytoscapeWindow ('deleteSelectedNodes.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
print (cy2.edge.names (cw@graph))  # find out Cytoscape's names for these edges
selectEdges (cw, "B (synthetic lethal) C")
deleteSelectedEdges (cw)
redraw (cw)

cw <- new.CytoscapeWindow ('deleteSelectedNodes.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
print (nodes (cw@graph))
selectNodes (cw, "B")
deleteSelectedNodes (cw)
deleteWindow

Description

Delete the window associated with the supplied CytoscapeConnection object. In addition, Cytoscape’s copy of the network is deleted from Cytoscape’s memory store, but the R graph object is unaffected.

There are two different ways to use this method. First, if you call it on a CytoscapeWindow object, using the default window.title value of NA, the Cytoscape window itself will be deleted. Alternatively, if you supply a window.title as the second argument – independent of whether or not the first argument is a CytoscapeConnection object, or its subclass, a CytoscapeWindow object, the named window is deleted.

Usage

deleteWindow(obj, window.title=NA)

Arguments

- obj: a CytoscapeConnectionClass object, or subclass
- window.title: a string object, optional title

Value

Nothing.

Author(s)

Paul Shannon

Examples

```r
window.title <- 'demo deleteWindow'
cw <- new.CytoscapeWindow (window.title, graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork (cw)
deleteWindow (cw)
cw2 <- new.CytoscapeWindow ('demo 2')
cy = CytoscapeConnection ()
deleteWindow (cy, 'demo 2')
```
### demoSimpleGraph

#### Description

Create, display and render the 3-node, 3-edge graph, with some biological trappings.

#### Usage

```r
demoSimpleGraph()
```

#### Value

Returns a CytoscapeWindow object, for subsequent manipulation

#### Author(s)

Paul Shannon

#### Examples

```r
cwd <- demoSimpleGraph()
```

---

### displayGraph

#### Description

This method transmits the CytoscapeWindowClass's graph data, from R to Cytoscape: nodes, edges, node and edge attributes, and displays it in a window titled as specified by the objects 'title' slot. With large graphs, this transmission may take a while. (todo: provide a few timing examples.) The resulting view, in Cytoscape, of the network will need layout and vizmap rendering; layout so that all the nodes and edges can be seen; rendering so that data attributes can control the appearance of the the nodes and edges.

#### Usage

```r
displayGraph(obj)
```

#### Arguments

- `obj`  
  a CytoscapeWindowClass object.

#### Value

Nothing.

#### Author(s)

Paul Shannon
**Examples**

```r

cw <- CytoscapeWindow ('displayGraph.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
```

**Description**

The specified panel is returned to its 'home' position in the Cytoscape Desktop if it had been previously floating or hidden. The `panelName` parameter is very flexible: a match is defined as a case-independent match of the supplied `panelName` to any starting characters in the actual `panelName`. Thus, 'd' and 'DA' both identify 'Data Panel'.

**Usage**

```r
dockPanel(obj, panelName)
```

**Arguments**

- **obj**: a `CytoscapeConnectionClass` object.
- **panelName**: a character string, providing a partial or complete case-independent match to the start of the name of an actual panel.

**Value**

Nothing.

**Author(s)**

Paul Shannon

**See Also**

`floatPanel`, `hidePanel`

**Examples**

```r

cy <- CytoscapeConnection ()
dockPanel (cy, 'Control Panel')
# or
dockPanel (cy, 'c')
```
Description

Obtain the value of the specified edge attribute for every edge in the graph.

Usage

eda(graph, edge.attribute.name)

Arguments

- `graph`: typically, a bioC graphNEL object
- `edge.attribute.name`: a character string

Details

The `edge.attribute.name` may be obtained from the function, `eda.names`.

Value

A list, the contents of which are the attribute values, the names of which are the names of the edges.

Author(s)

Paul Shannon

See Also

- `eda.names`

Examples

```r
g <- makeSimpleGraph()
da (g, 'edgeType')
```

## The function is currently defined as

```r
function (graph, edge.attribute.name)
{
  unlist(sapply(names(edgeData(graph)), function(n) edgeData(graph)[[n]][[edge.attribute.name]]))
}
```

# eda
**eda.names**

Description

Retrieve the names of the edge attributes in the specified graph. These are typically strings like 'score', 'weight', 'link', and (strongly recommended when you create a graph) 'edgeType'. Once you are reminded of the names of the edge attributes, you can use the method 'eda' to get all the values of this attribute for the edges in the graph.

Usage

```r
edata.names (graph)
```

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>graph</td>
<td>typically, a bioC graphNEL</td>
</tr>
</tbody>
</table>

Value

A list, the contents of which are the attribute values, the names of which are the names of the edges.

Author(s)

Paul Shannon

See Also

`eda`

Examples

```r
g <- makeSimpleGraph()
edata.names (g)
# "edgeType" "score" "misc"
```

**existing.CytoscapeWindow**

Description

The constructor for the CytoscapeWindowClass, used when Cytoscape already contains and displays a network.

Usage

```r
existing.CytoscapeWindow (title, host='localhost', rpcPort=9000, copy.graph.from.cytoscape.to.R=FALSE)
```
fitContent

Arguments

| title | A character string, this is the name of an existing Cytoscape network window. This name enables RCytoscape to identify and connect to the proper Cytoscape window and network that it contains. |
| host | Defaults to 'localhost', this is the domain name of a machine which is running Cytoscape with the appropriate XMLRPC server plugin. |
| rpcPort | Defaults to 9000, this may be any port to which the CytoscapeRPC server is listening. |
| copy.graph.from.cytoscape.to.R | Defaults to FALSE, but you may want a copy in R, for further exploration. |

Value

An object of the existing CytoscapeWindow Class.

Author(s)

Paul Shannon

Examples

cy <- CytoscapeConnection()
cw <- new.CytoscapeWindow('demo.existing', graph=makeSimpleGraph())
displayGraph(cw)
cw2 <- existing.CytoscapeWindow('demo.existing', copy.graph.from.cytoscape.to.R=TRUE)

Description

Using all of the available window (the Cytoscape drawing canvas) display the current graph.

Usage

fitContent(obj)

Arguments

| obj | a CytoscapeWindowClass object. |

Value

None.

Author(s)

Paul Shannon
**fitSelectedContent**

**See Also**

setZoom fitSelectedContent

**Examples**

```r
cw <- new.CytoscapeWindow ('fitContent.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setZoom (cw, 0.1)
fitContent (cw)
setZoom (cw, 10.0)
fitContent (cw)
```

**Description**

Using all of the available window (the Cytoscape drawing canvas) display the current graph.

**Usage**

`fitSelectedContent(obj)`

**Arguments**

- `obj` a `CytoscapeWindowClass` object.

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

setZoom fitContent

**Examples**

```r
cw <- new.CytoscapeWindow ('fitSelectedContent.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setZoom (cw, 0.1)
selectNodes (cw, 'A')
fitSelectedContent (cw)
setZoom (cw, 10.0)
fitSelectedContent (cw)
```
Description

The specified panel will 'float' detached from its 'home' position in the Cytoscape Desktop. As of this writing (10 aug 2010) the panel will tenaciously claim the topmost (visual) position on the screen... The panelName parameter is very flexible: a match is defined as a case-independent match of the supplied panelName to any starting characters in the actual panelName. Thus, 'd' and 'DA' both identify 'Data Panel'.

Usage

floatPanel(obj, panelName)

Arguments

obj a CytoscapeConnectionClass object.
panelName a character string, providing a partial or complete case-independent match to the start of the name of an actual panel.

Value

Nothing.

Author(s)

Paul Shannon

See Also

hidePanel dockPanel

Examples

```r
cy <- CytoscapeConnection()
floatPanel (cy, 'Control Panel')
  # or with less typing
floatPanel (cy, 'c')
```
getAdjacentEdgeNames

description

Given one or more node names, this method returns the ‘cy2-style’ names of the immediately adjacent
edges – suitable for being passed, for instance, to selectEdges, and thereby extending the
selection.

usage

getAdjacentEdgeNames(graph, node.names)

arguments

graph An R graph
node.names character strings

value

Zero or more cy2-style edge names.

author(s)

Paul Shannon

see also

cy2.edge.names, selectEdges, getSelectedNodes, selectFirstNeighborsOfSelectedNodes

examples

```r
g <- makeSimpleGraph ()
print (nodes (g))
print (getAdjacentEdgeNames (g, 'A'))
```

getAllEdgeAttributes

description

Create a data frame with all the edge attributes for the graph contained by the supplied CytoscapeWin-
dow object. Only the local copy of the graph is queried. If you want all the (possibly different) edge
attributes from the Cytoscape network which corresponds to this graph, one option is to create a
new CytoscapeWindow; see the existing.CytoscapeWindow function.

usage

getAllEdgeAttributes(obj, onlySelectedEdges=FALSE)
getAllEdges

Arguments

obj a CytoscapeWindowClass object.
onlySelectedEdges a logical variable, used to restrict the query.

Value

A data frame, with a column for each attribute, a row for each edge.

Author(s)

Paul Shannon

See Also

gETEdgeAttribute deleteEdgeAttribute getAllNodeAttributes

Examples

window.name = 'demo.getAllEdgeAttributes'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)
  # get all attributes for all edges
tbl.noa = getAllEdgeAttributes (cw, onlySelectedEdges=FALSE)

Description

Retrieve all edges in the current graph, expressed in the standard Cytoscape notation.

Usage

gETAllEdges(obj)

Arguments

obj a CytoscapeWindowClass object.

Value

A list of character strings.

Author(s)

Paul Shannon
getAllNodeAttributes

Examples

cw <- CytoscapeWindow ('getAllEdges.test', graph=makeSimpleGraph())
displayGraph (cw)
print (getAllEdges (cw))
# [1] "C (undefined) A" "B (synthetic lethal) C" "A (phosphorylates) B"

getAllNodeAttributes

Description

Create a data frame with all the node attributes for the graph contained by the supplied CytoscapeWindow object. Only the local copy of the graph is queried. If you want all the (possibly different) node attributes from the Cytoscape network which corresponds to this graph, one option is to create a new CytoscapeWindow; see the existing CytoscapeWindow function.

Usage

getAllNodeAttributes(obj, onlySelectedNodes=FALSE)

Arguments

obj
  a CytoscapeWindowClass object object.
onlySelectedNodes
  a logical variable, used to restrict the query.

Value

A data frame, with a column for each attribute, a row for each node.

Author(s)

Paul Shannon

See Also

g getNodeAttribute deleteNodeAttribute

Examples

window.name = 'demo.getAllNodeAttributes'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ()
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)
  # get all attributes for all nodes
tbl.noa = getAllNodeAttributes (cw, onlySelectedNodes=FALSE)
getAllNodes

Description
Retrieve the identifiers of all the nodes in the current graph - a list of strings.

Usage
getAllNodes(obj)

Arguments
obj a CytoscapeWindowClass object.

Value
A list of character strings. Note that node names are returned – their original and primary identifiers – and that these may be different from the node labels that you see when you look at the graph in Cytoscape.

Author(s)
Paul Shannon

Examples

cw <- CytoscapeWindow ('getAllNodes.test', graph=makeSimpleGraph())
displayGraph(cw)
print(getAllNodes(cw))
# [1] "C" "B" "A"

getArrowShapes

Description
Retrieve the names of the currently supported 'arrows' – the decorations can (optionally) appear at the ends of edges, adjacent to the nodes they connect, and conveying information about the nature of the nodes’ relationship. of strings.

Usage
getArrowShapes(obj)

Arguments
obj a CytoscapeConnectionClass object.
getAttributeClassNames

Value

A list of character strings, e.g., 'WHITE_DIAMOND', 'BLACK_T'

Author(s)

Paul Shannon

Examples

cy <- CytoscapeConnection ()
getArrowShapes (cy)
# [1] "No Arrow" "Diamond" "Delta" "Arrow" "T" "Circle" "Half Arrow Top" "Half Arrow Bottom"

ggetAttributeClassNames

ggetAttributeClassNames

Description

Retrieve the names of the recognized and supported names for the class of any node or edge attribute. Two or three options are provided for each of the basic types, with the intention that you can use names that seem natural to you, and RCytoscape will recognize them.

Usage

ggetAttributeClassNames(obj)

Arguments

obj a CytoscapeConnectionClass object.

Value

A list of character strings group, e.g., "floating|numeric|double", "integer|int", "string|char|character"

Author(s)

Paul Shannon

Examples

cy <- CytoscapeConnection ()
getattributeClassNames (cy)
# [1] "floating|numeric|double" "integer|int" "string|char|character"
getCenter
getCenter

Description
This method returns the coordinates of the current center of the visible Cytoscape canvas, or drawing surface. The initial values are a little unpredictable, but seem to be on the order of 100 for both x and y.

Usage
getcherCenter(obj)

Arguments
obj a CytoscapeWindowClass object.

Value
A names list, x and y.

Author(s)
Paul Shannon

See Also
getcherCenter getZoom setZoom

Examples
window.title = 'getCenter demo'
cw <- new.CytoscapeWindow (window.title, graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
print (getCenter (cw))

getDefaultBackgroundColor
getDefaultBackgroundColor

Description
Retrieve the default color for the next CytoscapeWindow.

Usage
getcherDefaultBackgroundColor(obj, vizmap.style.name)
**getDescriptionReverseSelectionColor**

**Arguments**

- **obj**  
  a CytoscapeConnectionClass object.

- **vizmap.style.name**  
  a character object, 'default' by default

**Value**

A character string, eg "java.awt.Color[r=204,g=204,b=255]"

**Author(s)**

Paul Shannon

**Examples**

```r
cy <- CytoscapeConnection ()
print (getDescriptionBackgroundColor (cy)) # "java.awt.Color[r=204,g=204,b=255]"
```

---

**getDescriptionReverseSelectionColor**

**getDescriptionReverseSelectionColor**

**Description**

Retrieve the default color used to display selected edges.

**Usage**

getDescriptionReverseSelectionColor(obj, vizmap.style.name)

**Arguments**

- **obj**  
  a CytoscapeConnectionClass object.

- **vizmap.style.name**  
  a character object, 'default' by default

**Value**

A character string, eg "java.awt.Color[r=204,g=204,b=255]"

**Author(s)**

Paul Shannon

**Examples**

```r
cy <- CytoscapeConnection ()
print (getDescriptionReverseSelectionColor (cy)) # "java.awt.Color[r=0,g=255,b=0]"
```
getDefaultEdgeSelectionColor

Description
Retrieve the default color used to display selected edges.

Usage
getDefaultEdgeSelectionColor(obj, vizmap.style.name)

Arguments
obj a CytoscapeConnectionClass object.
vizmap.style.name a character object, 'default' by default

Value
A character string, eg "java.awt.Color[r=204,g=204,b=255]"

Author(s)
Paul Shannon

Examples

cy <- CytoscapeConnection()
print(getDefaultEdgeSelectionColor(cy))  # "java.awt.Color[r=255,g=0,b=0]"

getDefaultNodeReverseSelectionColor

Description
Retrieve the default color used to display selected nodes.

Usage
getDefaultNodeReverseSelectionColor(obj, vizmap.style.name)

Arguments
obj a CytoscapeConnectionClass object.
vizmap.style.name a character object, 'default' by default
**getDefaultNodeSelectionColor**

**Value**
A character string, eg "java.awt.Color[r=204,g=204,b=255]"

**Author(s)**
Paul Shannon

**Examples**
```r
cy <- CytoscapeConnection ()
print (getDefaultNodeReverseSelectionColor (cy))  # "java.awt.Color[r=0,g=255,b=0]"
```

**Description**
Retrieve the default color used to display selected nodes.

**Usage**
```r
defaultGetNodeSelectionColor(obj, vizmap.style.name)
```

**Arguments**
- `obj`: a `CytoscapeConnectionClass` object.
- `vizmap.style.name`: a character object, 'default' by default

**Value**
A character string, eg "java.awt.Color[r=204,g=204,b=255]"

**Author(s)**
Paul Shannon

**Examples**
```r
cy <- CytoscapeConnection ()
print (getDefaultNodeSelectionColor (cy))  # "java.awt.Color[r=0,g=255,b=0]"
```
getDirectlyModifiableVisualProperties

**Description**

Retrieve the names of those visual attributes which can be set directly, bypassing vizmap rules.

**Usage**

```r
getDirectlyModifiableVisualProperties(obj)
```

**Arguments**

- `obj` a CytoscapeConnectionClass object.

**Value**

A list of about 60 character strings, e.g., "Node Color" and "Edge Font Size"

**Author(s)**

Paul Shannon

**Examples**

```r
cy <- CytoscapeConnection()
getDirectlyModifiableVisualProperties(cy)
# [1] "Node Color" "Node Border Color" "Node Line Type" "Node Shape"
# [5] "Node Size" "Node Width" "Node Height" "Node Label"
# ...
```

getEdgeAttribute

**Description**

Node and edge attributes are usually added to a Cytoscape network by defining them on the graph used to construct a CytoscapeWindow. The small family of methods described here, however, provide another avenue for adding an edge attribute, for learning which are currently defined, and for deleting an edge attribute.

Note that edge (and node) attributes are defined, not just for a specific, single CytoscapeWindow, but for an entire Cytoscape application session. Thus if you have two nodes (or edges) with the same ID (the same name) in two different windows, adding a node attribute results in both nodes having that attribute.

**Usage**

```r
getEdgeAttribute(obj, edge.name, attribute.name)
```
**Arguments**

- `obj` a `CytoscapeConnectionClass` object or `CytoscapeWindow` object.
- `edge.name` a character string specifying the Cytoscape-style name of an edge.
- `attribute.name` a character string, the name of the attribute you wish to retrieve.

**Value**

The attribute in question, which may be of any scalar type.

**Author(s)**

Paul Shannon

**See Also**

ggetEdgeAttributeNames deleteEdgeAttribute

**Examples**

```r
window.name = 'demo.getEdgeAttribute'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
setDefaultEdgeLineWidth (cw, 5);
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)

score.bc = getEdgeAttribute (cw, "B (synthetic lethal) C", 'score')
print (paste("should be -12: ", score.bc))
```

**Description**

Node and edge attributes belong to the Cytoscape session as a whole, not to a particular window. Use this method to find out the name of the currently defined edge attributes.

**Usage**

```r
getEdgeAttributeNames(obj)
```
Author(s)

Paul Shannon

See Also

gEDGEAttribute deleteEdgeAttribute getNodeAttributeNames

Examples

cy = CytoscapeConnection ()
print (getEdgeAttributeNames (cy))

cy = CytoscapeConnection ()
print (getEdgeAttributeNames (cy))

Description

Reports the number of the edges in the current graph.

Usage

gEDGECount(obj)

Arguments

obj a CytoscapeWindowClass object.

Value

A list of character strings.

Author(s)

Paul Shannon

Examples

cw <- new.CytoscapeWindow ('getEdgeCount.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
  # in Cytoscape, interactively select two nodes, or
gEDGECount (cw)
  # [1] 3
**getFirstNeighbors**

**Description**

Returns a non-redundant ('uniquified') list of all of the first neighbors of the supplied list of nodes.

**Usage**

```r
getFirstNeighbors(obj, node.names)
```

**Arguments**

- `obj`: a `CytoscapeWindowClass` object.
- `node.names`: a `String` list object.

**Value**

A list of node names.

**Author(s)**

Paul Shannon

**See Also**

`selectNodes`, `selectFirstNeighborsOfSelectedNodes`

**Examples**

```r
cw <- new.CytoscapeWindow ("getFirstNeighbors.test", graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
print (getFirstNeighbors (cw, 'A'))
selectNodes (cw, getFirstNeighbors (cw, 'A')) # note that A is not selected
```

---

**getGraph**

**Description**

Returns the bioconductor graph object which belongs to the specified `CytoscapeWindow` object.

**Usage**

```r
getGraph(obj)
```
getGraphFromCyWindow

Arguments

obj  a CytoscapeWindowClass object.

Value

A graph object.

Author(s)

Paul Shannon

Examples

cw <- CytoscapeWindow ('getGraph.test', graph=makeSimpleGraph())
displayGraph (cw)
print (getGraph (cw))

getGraphFromCyWindow  getGraphFromCyWindow

Description

Returns the Cytoscape network as a bioconductor graph

Usage

getGraphFromCyWindow(obj, window.title)

Arguments

obj  a CytoscapeConnectionClass object.
window.title  a string object.

Value

A bioconductor graph object.

Author(s)

Paul Shannon

Examples

cw <- CytoscapeWindow ('getGraphFromCyWindow.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw)
redraw (cw)
g.cy <- getGraphFromCyWindow (cw, 'getGraphFromCyWindow.test')
print (g.cy)  # 3 nodes, 3 edges
Description

The Cytoscape 'Layout' menu lists many layout algorithms, but the names presented there are different from the names by which these algorithms are known to layout method. This method returns a named list in which the names are from the GUI, and the values identify the names you must use to choose an algorithms in the programmatic interface.

Usage

getLayoutNameMapping(obj)

Arguments

obj a CytoscapeConnectionClass object.

Value

A named list of strings.

Author(s)

Paul Shannon

See Also

layout getLayoutNames getLayoutPropertyNames getLayoutPropertyType getLayoutPropertyValue setLayoutProperties

Examples

cy <- CytoscapeConnection()
layout.name.map <- getLayoutNameMapping(cy)
print(head(names(layout.name.map), n=3))
# [1] "Inverted Self-Organizing Map Layout" "Group Attributes Layout" "MOEN Layout"
print(head(as.character(layout.name.map), n=3))
# [1] "isom" "attributes-layout" "jgraph-moen"
**getLayoutNames**

**Description**
Retrieve the names of the currently supported layout algorithms. These may be used in subsequent calls to the `layout` function. Note that some of the more attractive layout options, from yFiles, cannot be run except from the user interface; their names do not appear here.

**Usage**
```r
getLayoutNames(obj)
```

**Arguments**
- `obj` a CytoscapeConnectionClass object.

**Value**
A list of character strings, e.g., "jgraph-circle" "attribute-circle" "jgraph-annealing"

**Author(s)**
Paul Shannon

**See Also**

cy <- CytoscapeConnection()
getLayoutNames(cy)
# [1] "jgraph-circle" "attribute-circle" "jgraph-annealing" ...
```

---

**getLayoutPropertyNames**

**Description**
Returns a list of the tunable properties for the specified layout.

**Usage**
```r
getLayoutPropertyNames(obj, layout.name)
```
Arguments

obj  a CytoscapeConnectionClass object.
layout.name  a string object.

Value

A named list of strings.

Author(s)

Paul Shannon

See Also

layout getLayoutNames getLayoutNameMapping getLayoutPropertyType getLayoutPropertyValue setLayoutProperties

Examples

cy <- CytoscapeConnection()
prop.names <- getLayoutPropertyNames(cy, 'isom')
print(prop.names)
  # "maxEpoch" "sizeFactor" "radiusConstantTime" "radius" "minRadius" "initialAdaptation" "minAdaptation"

getLayoutPropertyType  getLayoutPropertyType

Description

Returns a list of the tunable properties for the specified layout.

Usage

getLayoutPropertyType(obj, layout.name, property.name)

Arguments

obj  a CytoscapeConnectionClass object.
layout.name  a string object.
property.name  a string object.

Value

A character string specifying the type. These types do not always necessarily to R types.

Author(s)

Paul Shannon
getLayoutPropertyValue

**Description**

Returns the appropriately typed value of the specified tunable property for the specified layout.

**Usage**

getLayoutPropertyValue(obj, layout.name, property.name)

**Arguments**

- **obj**
  a CytoscapeConnectionClass object.
- **layout.name**
  a string object.
- **property.name**
  a string object.

**Value**

Typically an integer, numeric or string value, the current setting of this property for this layout.

**Author(s)**

Paul Shannon

**See Also**

print (prop.names)
# "maxEpoch" "sizeFactor" "radiusConstantTime" "radius" "minRadius" "initialAdaptation" "minAdaptation"

sapply (prop.names, function (pn) getLayoutPropertyValue (cy, 'isom', 'coolingFactor'))
# maxEpoch sizeFactor radiusConstantTime radius minRadius initialAdaptation
# 2 2 2 2 2 2

getLineStyles

description

Retrieve the names of the currently supported line types – values which can be used to render edges, and thus can be used in calls to `setEdgeLineStyleRule`

Usage

gelineStyles(obj)

Arguments

obj a CytoscapeConnectionClass object.

Value

A list of character strings, e.g., 'SOLID', 'DOT'

Author(s)

Paul Shannon

Examples

cy <- CytoscapeConnection ()
gelineStyles (cy)
# [1] "SOLID" "LONG_DASH" "EQUAL_DASH" ...
getNodeAttribute

Description
Node and node attributes are usually added to a Cytoscape network by defining them on the graph used to construct a CytoscapeWindow. The small family of methods described here, however, provide another avenue for adding a node attribute, for learning which are currently defined, and for deleting and node attribute.

Note that node (and node) attributes are defined, not just for a specific, single CytoscapeWindow, but for an entire Cytoscape application session. Thus if you have two nodes (or nodes) with the same ID (the same name) in two different windows, adding a node attribute results in both nodes having that attribute.

Usage
getNodeAttribute(obj, node.name, attribute.name)

Arguments
obj: a CytoscapeConnectionClass object or CytoscapeWindow object.
node.name: a character string specifying the Cytoscape-style name of an node.
attribute.name: a character string, the name of the attribute you wish to retrieve.

Value
The attribute in question, which may be of any scalar type.

Author(s)
Paul Shannon

See Also
getNodeAttributeNames deleteNodeAttribute

Examples
window.name = 'demo.getNodeAttribute'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)

count.B = getNodeAttribute (cw, "B", 'count')
getNodeAttributeNames

Description
Node and node attributes belong to the Cytoscape session as a whole, not to a particular window. Use this method to find out the name of the currently defined node attributes.

Usage
getNodeAttributeNames(obj)

Arguments
obj a CytoscapeConnectionClass object or CytoscapeWindow object.

Value
A list of names.

Author(s)
Paul Shannon

See Also
g getNodeAttribute deleteNodeAttribute getEdgeAttributeNames

Examples

cy = CytoscapeConnection ()
print (getNodeAttributeNames (cy))

getNodeCount

Description
Reports the number of nodes in the current graph.

Usage
getNodeCount(obj)

Arguments
obj a CytoscapeWindowClass object.
**Value**

A list of character strings.

**Author(s)**

Paul Shannon

**Examples**

```r
cw <- new.CytoscapeWindow ('getNodeCount.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
# in Cytoscape, interactively select two nodes, or
getNodeCount (cw)
# [1] 3
```

**Description**

Get the position of the specified nodes on the CytoscapeWindow canvas. Useful in retrieving the current position of nodes in the window.

**Usage**

```r
genoNodePosition(obj, node.names)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.
- `node.names` a list of strings, the names of nodes to select.

**Value**

A names list of x,y pairs; names are the identifiers of nodes supplied when the graph was created.

**Author(s)**

Paul Shannon

**Examples**

```r
cw <- new.CytoscapeWindow ('getNodePosition.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw)
getNodePosition (cw, c ('A', 'B', 'C'))
```
getNodeShapes

Description
Retrieve the names of the currently supported node shapes, which can then be used in calls to setNodeShapeRule and setDefaultVizMapValue.

Usage
getNodeShapes(obj)

Arguments
obj a CytoscapeConnectionClass object.

Value
A list of character strings, e.g., 'trapezoid', 'ellipse', 'rect'

Author(s)
Paul Shannon

Examples

cy <- CytoscapeConnection()
getNodeShapes(cy)
# "trapezoid" "round_rect" "ellipse" "triangle" "rect_3d" "diamond" "parallelogram" "octagon" "trapezoid_2" "rect" "hexagon"

getNodeSize

Description
Get the size of the specified nodes on the CytoscapeWindow canvas.

Usage
g getNodeSize(obj, node.names)

Arguments
obj a CytoscapeWindowClass object.
node.names a list of strings, the names of nodes to select.
getSelectedEdgeCount

Description

Returns the number of edge currently selected.

Usage

getSelectedEdgeCount(obj)

Arguments

obj a CytoscapeWindowClass object.

Value

An integer.
**getSelectedEdges**

**Author(s)**

Paul Shannon

**Examples**

```r
cw <- new.CytoscapeWindow('getSelectedEdgeCount.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
clearSelection (cw)
getSelectedEdgeCount (cw) # should be 0
# in Cytoscape, interactively select an edge, or programmatically (doesn't work yet)
# selectEdges (cwe, "A (phosphorylates) B")
getSelectedEdgeCount (cw)
# should be 1
```

---

**getSelectedEdges**

**getSelectedEdges**

---

**Description**

Retrieve the identifiers of all the edges selected in the current graph.

**Usage**

```r
generatedEdges(obj)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.

**Value**

A list of character strings.

**Author(s)**

Paul Shannon

**Examples**

```r
cw <- new.CytoscapeWindow('getSelectedEdges.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)

# in Cytoscape, interactively select two edges
# doesn't work yet: selectEdges (cwe, "A (phosphorylates) B")
generatedEdges (cw)
```
### getSelectedNodes

**Description**

Retrieve the identifiers of all the nodes selected in the current graph.

**Usage**

```
getSelectedNodes(obj)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.

**Examples**

```r
cw <- new.CytoscapeWindow('getSelectedNodeCount.test', graph=makeSimpleGraph())
displayGraph(cw)
layoutNetwork(cw, 'jgraph-spring')
redraw(cw)
  # in Cytoscape, interactively select two nodes, or
selectNodes(cw, c('A','B'))
getSelectedNodesCount(cw)
# [1] 2
```

Value

A list of character strings.

Author(s)

Paul Shannon

Examples

cw <- new.CytoscapeWindow ('getSelectedNodes.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
  # in Cytoscape, interactively select two nodes, or
selectNodes (cw, c ('A','B'))
getSelectedNodes (cw)
  # [1] "A" "B"

Description

This method returns the four numbers (top.x, top.y, bottom.x, bottom.y) which implicitly specify
the bounds of the current window.

Usage

getViewCoordinates(obj)

Arguments

obj a CytoscapeWindowClass object.

Value

A named list of four numbers, with these names: top.x, top.y, bottom.x, bottom.y

Author(s)

Paul Shannon

See Also

g bvewCoordinates getZoom setZoom
getVisualStyleNames

Examples

window.title = 'getViewCoordinates demo'
cw <- new.CytoscapeWindow (window.title, graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
print (getViewCoordinates (cw))

cy = CytoscapeConnection ()
print (getVisualStyleNames (cy))

Description

Cytoscape provides a number of canned visual styles, to which you may add your own. Use this method to find out the names of those which are currently defined.

Usage

getVisualStyleNames(obj)

Arguments

obj

A CytoscapeConnectionClass object or CytoscapeWindow object.

Value

A list of character strings.

Author(s)

Paul Shannon

See Also

copyVisualStyle setVisualStyle

Examples

getVisualStyleNames  getVisualStyleNames
**getWindowCount**

**Description**

Returns the number of windows which currently exist in the Cytoscape Desktop.

**Usage**

`getWindowCount(obj)`

**Arguments**

- `obj` a CytoscapeConnectionClass object.

**Value**

An integer.

**Author(s)**

Paul Shannon

**Examples**

```r
cy <- CytoscapeConnection()
count.at.start = getWindowCount(cy)
cw2 <- CytoscapeWindow('getWindowCount.test1', graph=makeSimpleGraph())
cw3 <- CytoscapeWindow('getWindowCount.test2', graph=makeSimpleGraph())
getWindowCount(cy)
# should be two greater than 'count.at.start'
```

**getWindowID**

**Description**

Windows in Cytoscape have both a title and an identifier. The title is useful for human readers; the identifier is used by Cytoscape internals, and is sometimes useful to obtain. This method returns the identifier associated with the window title.

**Usage**

`getWindowID(obj, window.title)`

**Arguments**

- `obj` a CytoscapeConnectionClass object.
- `window.title` a string.
getWindowList

Value

The identifier (id) of a window, which is always a string – even if the identifier appears to be an integer.

Author(s)

Paul Shannon

See Also

ggetWindowList

Examples

```r
cy <- CytoscapeConnection()
cw <- new.CytoscapeWindow('getWindowID.test', graph=makeSimpleGraph())
displayGraph(cw)
getWindowID(cy, 'getWindowID.test')
```

getWindowList
ggetWindowList

Description

Returns a named list of windows in the current Cytoscape Desktop.

Usage

```r
ggetWindowList(obj)
```

Arguments

- **obj**
  
a CytoscapeConnectionClass object.

Value

A named list, in which the values are the titles of the windows; the names of the list are integers.

Author(s)

Paul Shannon

Examples

```r
cy <- CytoscapeConnection()
ggetWindowList(cy)
```
### Description

This method returns the zoom level of the CytoscapeWindow. A value of 1.0 typically renders the graph with an ample margin. A call to `fitContent` produces a zoom level of about 1.5.

### Usage

```r
getZoom(obj)
```

### Arguments

- `obj`: a `CytoscapeWindowClass` object.

### Value

A names list, x and y.

### Author(s)

Paul Shannon

### See Also

- `setZoom`
- `getCenter`
- `setCenter`
- `getViewCoordinates`
- `fitContent`

### Examples

```r
window.title = 'getZoom demo'
cw <- new.CytoscapeWindow (window.title, graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
print (getZoom (cw))
```

---

### Description

All panels will be hidden, and no longer visible in the Cytoscape Desktop of, if floating, elsewhere on the computer screen.

### Usage

```r
hideAllPanels(obj)
```
hideNodes

Arguments

- obj: a CytoscapeConnectionClass object.

Value

Nothing.

Author(s)

Paul Shannon

See Also

floatPanel dockPanel hidePanel

Examples

```r
cy <- CytoscapeConnection()
hideAllPanels(cy)
```

Description

Hide (but do not delete) the currently nodes. Highly recommended: save the current layout before hiding, since `unhideAll` will, in addition to restoring hidden nodes to view, will place them in unpredictable locations on the screen.

Usage

```r
hideNodes(obj, node.names)
```

Arguments

- obj: a CytoscapeWindowClass object.
- node.names: a character list object.

Value

None.

Author(s)

Paul Shannon

See Also

hideSelectedNodes unhideAll saveLayout restoreLayout
Examples

cw <- new.CytoscapeWindow ('hideNodes.test', graph=makeSimpleGraph())
redraw (cw)
layoutNetwork (cw, 'jgraph-spring')
# saveLayout (cw, 'layout.tmp.RData')
hideNodes (cw, c ('A', 'B'))
unhideAll (cw)
# restoreLayout (cw, 'layout.tmp.RData')

Description

The specified panel will be hidden, and no longer visible in the Cytoscape Desktop or, if floating, elsewhere on the computer screen. The panelName parameter is very flexible: a match is defined as a case-independent match of the supplied panelName to any starting characters in the actual panelName. Thus, ‘d’ and ‘DA’ both identify ‘Data Panel’.

Usage

hidePanel (obj, panelName)

Arguments

obj a CytoscapeConnectionClass object.
panelName a character string, providing a partial or complete case-independent match to the start of the name of an actual panel.

Value

Nothing.

Author(s)

Paul Shannon

See Also

floatPanel dockPanel hideAllPanels

Examples

cy <- CytoscapeConnection ()
hidePanel (cy, 'Control Panel')
# or
hidePanel (cy, 'c')
hideSelectedEdges

Description
Hide (but do not delete) the currently selected edges. 'Unhide' is supposed to return them to view, but this is broken in Cytoscape 2.7.

Usage
hideSelectedEdges(obj)

Arguments
obj a CytoscapeWindowClass object.

Value
None.

Author(s)
Paul Shannon

See Also
unhideAll

Examples

```r
cw <- new.CytoscapeWindow ('hideSelectedEdges.test', graph=makeSimpleGraph())
# selectEdges (cw, 'B (synthetic lethal) C')
hideSelectedEdges (cw)
unhideAll (cw)
# alas, Cytoscape requires that you render these edges, and redo the
# layout, so that they are visible again
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
```

hideSelectedNodes

Description
Hide (but do not delete) the currently selected nodes. We strongly recommend that you save the current layout before hiding any nodes: 'unhideAll' often places restored nodes in unpredictable positions.

Usage
hideSelectedNodes(obj)
Arguments

obj a CytoscapeWindowClass object.

Value

None.

Author(s)

Paul Shannon

See Also

unhideAll

Examples

cw <- new.CytoscapeWindow ("hideSelectedNodes.test", graph=makeSimpleGraph())
# saveLayout (cw, 'layout.tmp.RData')
selectNodes (cw, c ("A", "B"))
hideSelectedNodes (cw)
unhideAll (cw)
# restoreLayout (cw, 'layout.tmp.RData')

initEdgeAttribute

initEdgeAttribute

Description

Create the edge attribute slot that the Bioconductor graph class requires, including a default value, and then specifying what the base type (or 'class') is – 'char', 'integer', or 'numeric' – which is needed by RCytoscape. This method converts these standard R data type names, to the forms needed by Cytoscape.

Usage

initEdgeAttribute(graph, attribute.name, attribute.type, default.value)

Arguments

graph a Bioconductor graph object.
attribute.name a string, the name of the new edge attribute.
attribute.type a string, either 'char', 'integer', or 'numeric'
default.value something sensible, of the right type

Value

Returns the modified graph.
Author(s)
Paul Shannon

See Also
initNodeAttribute makeSimpleGraph

Examples

```r
  g = new ('graphNEL', edgemode='directed')
  g = initEdgeAttribute (g, 'edgeType', 'char', 'associates with')
```

Description

Create the node attribute slot that the Bioconductor graph class requires, including a default value, and then specifying what the base type (or 'class') is – 'char', 'integer', or 'numeric' – which is needed by RCytoscape. This method converts these standard R data type names, to the forms needed by Cytoscape.

Usage

```
initNodeAttribute(graph, attribute.name, attribute.type, default.value)
```

Arguments

- `graph`: a Bioconductor graph object.
- `attribute.name`: a string, the name of the new node attribute.
- `attribute.type`: a string, either 'char', 'integer', or 'numeric'
- `default.value`: something sensible, of the right type

Value

Returns the modified graph.

Author(s)
Paul Shannon

See Also
initEdgeAttribute makeSimpleGraph

Examples

```r
  g = new ('graphNEL', edgemode='directed')
  g = initNodeAttribute (g, 'lfc', 'numeric', 1.0)
```
invertEdgeSelection

**Description**
Select the specified nodes.

**Usage**
```r
invertEdgeSelection(obj)
```

**Arguments**
- `obj` a `CytoscapeWindowClass` object.

**Value**
None.

**Author(s)**
Paul Shannon

**See Also**
clearSelection, invertNodeSelection

**Examples**
```r
cw <- new.CytoscapeWindow('invertEdgeSelection demo', graph=makeSimpleGraph())
  # all edges should be selected, since none were before
  invertEdgeSelection (cw)
  redraw (cw)
  # a richer test will be to programmatically select edges, but that
  # does not work yet (pshannon, 13 jan 2011)
```

invertNodeSelection

**Description**
Select the specified nodes.

**Usage**
```r
invertNodeSelection(obj)
```

**Arguments**
- `obj` a `CytoscapeWindowClass` object.
Value

None.

Author(s)

Paul Shannon

See Also
clearSelection invertNodeSelection

Examples

cw <- new.CytoscapeWindow ('invertNodeSelection demo', graph=makeSimpleGraph())
  # all nodes should be selected, since none were before
  selectNodes (cw, 'A')
  invertNodeSelection (cw)
  redraw (cw)
  # a richer test will be to programmatically select nodes, but that
  # does not work yet (pshannon, 13 jan 2011)

Description

Layout the current graph according to the specified algorithm.

Usage

layoutNetwork(obj, layout.name='jgraph-spring')

Arguments

  obj a CytoscapeWindowClass object.
  layout.name a string, one of the values returned by getLayoutNames, 'jgraph-spring' by default.

Value

Nothing.

Author(s)

Paul Shannon

See Also
getNodeShapes
Examples

cw <- new.CytoscapeWindow ('layout.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork (cw, 'jgraph-spring')
redraw (cw)  # applies default vizmap (rendering) rules, plus any you # have specified

Description

Select the specified nodes.

Usage

lockNodeDimensions(obj, new.state, visual.style.name='default')

Arguments

obj an object of class CytoscapeConnectionClass.
new.state a boolean object, TRUE or FALSE
visual.style.name a string object, naming the visual style whose 'locked' you wish to change. Defaults to 'default'

Value

None.

Author(s)

Paul Shannon

See Also

setNodeSizeDirect setNodeWidthDirect setNodeHeightDirect

Examples

cw <- new.CytoscapeWindow ('lockNodeDimensions demo', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw)
redraw (cw)
lockNodeDimensions (cw, FALSE)
setNodeWidthDirect (cw, 'A', 100)
setNodeHeightDirect (cw, 'A', 50)
Description

Create a random undirected graphNEL, useful for testing. Two default edge attributes are added, for demonstration purposes.

Usage

makeRandomGraph(node.count=12, seed=123)

Arguments

node.count  the number of nodes you wish to see in the graph
seed        an integer which, when supplied, allows reproducibility

Value

Returns (by default) a 12-node, rather dense undirected graph, with some attributes on the nodes and edges.

Author(s)

Paul Shannon

Examples

g = makeRandomGraph (node.count=12, seed=123)

## The function is currently defined as
function (node.count = 12, seed = 123)
{
  set.seed(seed)
  node.names = as.character(1:node.count)
  g = randomGraph(node.names, M <- 1:2, p = 0.6)
  attr(edgeDataDefaults(g, attr = "weight"), "class") = "DOUBLE"
  edgeDataDefaults(g, "pmid") = "9988778899"
  attr(edgeDataDefaults(g, attr = "pmid"), "class") = "STRING"
  return(g)
}
Description
A 3-node, 3-edge graph, with some biological trappings, useful for demonstrations.

Usage
makeSimpleGraph()

Value
Returns a 3-node, 3-edge graph, with some attributes on the nodes and edges.

Author(s)
Paul Shannon

Examples

g = makeSimpleGraph()

## The function is currently defined as

function ()
{
  g = new("graphNEL", edgemode = "directed"

edgeData(g, "B", "C", "edgeType") = "synthetic lethal"
edgeData(g, "A", "B", "score") = 35
edgeData(g, "B", "C", "score") = -12
return(g)
}

---

### Description

Display the supplied string in the Cytoscape Desktop status bar

### Usage

```
msg(obj, string)
```

### Arguments

- **obj**: a CytoscapeConnectionClass object.
- **string**: a char, an arbitrary string, which can be used to inform the user of things they may wish to know

### Value

Nothing.

### Author(s)

Paul Shannon

### See Also

clearMsg

### Examples

```
cy <- CytoscapeConnection()
msg(cy, 'this message will appear in the Cytoscape Desktop status bar, which is found at the lower corner of')
```
Description

The constructor for the CytoscapeWindowClass

Usage

new.CytoscapeWindow(title, graph = new("graphNEL", edgemode='directed'), host = "localhost", rpcPort = 9000,
create.window = TRUE, overwriteWindow=FALSE, collectTimings=FALSE)

Arguments

title A character string, this is the name you will see on the Cytoscape network window. Multiple windows with the same name are not permitted.

graph A Bioconductor graph.

host Defaults to 'localhost', this is the domain name of a machine which is running Cytoscape with the appropriate XMLRPC server plugin.

rpcPort Defaults to 9000, this may be any port to which the CytoscapeRPC server is listening.

create.window Defaults to TRUE, but if you want a CytoscapeWindow just to call what in Java we would call 'class methods' – getWindowList () for instance, a CytoscapeWindow without an actual window can be useful.

overwriteWindow Every Cytoscape window must have a unique title. If the title you supply is already in use, this method will fail unless you specify TRUE for this parameter, in which case the pre-existing window with the same title will be deleted before this new one is created.

collectTimings Default FALSE. Will record and report the time required to send a graph to Cytoscape.

Value

An object of the CytoscapeWindow Class.

Author(s)

Paul Shannon

See Also

CytoscapeWindow existing.CytoscapeWindow, predictTimeToDisplayGraph

Examples

cw <- new.CytoscapeWindow ("new.demo", new ("graphNEL"))
Description
Retrieve the value of the specified node attribute for every node in the graph.

Usage
noa(graph, node.attribute.name)

Arguments
graph typically, a bioC graphNEL
node.attribute.name a character string

Value
A list, the contents of which are the attribute values, the names of which are the names of the nodes.

Author(s)
Paul Shannon

See Also
noa.names

Examples
g <- makeSimpleGraph()
noa(g, 'type')
# A.A B.B C.C
# "kinase" "transcription factor" "glycoprotein"

Description
Retrieve the names of the node attributes in the specified graph.

Usage
noa.names(graph)

Arguments
graph
Description
Test the connection to Cytoscape.

Usage

ping(obj)

Arguments

obj a CytoscapeConnectionClass object.

Value

"It works!"

Author(s)

Paul Shannon

Examples

```r
cy <- CytoscapeConnection()
ping(cy)
# "It works!"
```
**Description**
Test the connection to Cytoscape.

**Usage**
`pluginVersion(obj)`

**Arguments**
- `obj` a `CytoscapeConnectionClass` object.

**Value**
"A string describing the current version of the CytoscapeRPC plugin."

**Author(s)**
Paul Shannon

**Examples**
```r
cy <- CytoscapeConnection()
predictTimeToDisplayGraph(cy)
```

**Description**
Use simple heuristics and previously collected timing to predict the length of time that will be required to send the R graph across the XMLRPC wire to Cytoscape.

**Usage**
`predictTimeToDisplayGraph(obj)`

**Arguments**
- `obj` a `CytoscapeWindowClass` object.

**Value**
Time in seconds.
**raiseWindow**

**Author(s)**

Paul Shannon

**See Also**

new.CytoscapeWindow

**Examples**

```r
cw <- new.CytoscapeWindow ('predictTimeToDisplayGraph.test', graph=makeSimpleGraph(), collectTimings=TRUE)
message (paste ('estimated time: ', predictTimeToDisplayGraph (cw)))
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
```

---

**Description**

Raise this window to the top on the Cytoscape desktop, so that it can be seen.

**Usage**

`raiseWindow(obj, window.title=NA)`

**Arguments**

- `obj` a `CytoscapeConnectionClass` object, or its subclass, `CytoscapeWindowClass`.
- `window.title` a string.

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

resizeWindow

**Examples**

```r
cw <- new.CytoscapeWindow ('raiseWindow.test', graph=makeSimpleGraph())
raiseWindow (cw)
```
**redraw**

Description
Asks Cytoscape to redraw all nodes and edges, applying the vizmap rules.

Usage
redraw(obj)

Arguments
obj a CytoscapeWindowClass object.

Value
None.

Author(s)
Paul Shannon

See Also
displayGraph layout

Examples

```r
cw <- new.CytoscapeWindow ("redraw.test", graph=makeSimpleGraph())
redraw (cw)
```

---

**restoreLayout**

Description
restore the current layout (that is, node positions) from the information saved in the supplied filename.

Usage
restoreLayout(obj, filename)

Arguments
obj a CytoscapeWindowClass object.
filename a string
**saveImage**

**Value**
Nothing.

**Author(s)**
Paul Shannon

**See Also**
saveLayout

**Examples**

```r
cw <- new.CytoscapeWindow ('restoreLayout.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
saveLayout (cw, 'layout.RData')
layoutNetwork(cw, 'jgraph-circle')
restoreLayout (cw, 'layout.RData')
```

**Description**
Write an image of the specified type to the specified file, at the specified scaling factor. Note: the file is written to the file system of the computer upon which Cytoscape is running, not R – in those cases where they are different.

**Usage**

```r
saveImage(obj, file.name, image.type, scale)
```

**Arguments**

- **obj**
  A CytoscapeWindowClass object.
- **file.name**
  A char object. Use an explicit, full path, or this file will be written into your home directory.
- **image.type**
  A char object. ’jpg’ is the only image type currently supported
- **scale**
  A numeric object. How large (or small) to scale the image.

**Value**
None.

**Author(s)**
Paul Shannon

selectNodes clearSelection

Examples

cw <- new.CytoscapeWindow ('saveImage.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
filename = tempfile () # paste (getwd (), 'saveImageTest.jpg', sep='/"
# saveImage (cw, filename, 'jpg', 2.0) # doesn't yet work reliably at bioc

saveLayout (cw, 'layout.RData')
layoutNetwork(cw, 'jgraph-circle')
restoreLayout (cw, 'layout.RData')
saveLayout (cw, 'layout2', timestamp.in.filename=TRUE)

Description

save the current layout (that is, node positions) to the specified file.

Usage

saveLayout(obj, filename, timestamp.in.filename=FALSE)

Arguments

obj a CytoscapeWindowClass object.
filename a string.
timestamp.in.filename logical.

Value

Nothing.

Author(s)

Paul Shannon

See Also

restoreLayout

Examples

cw <- new.CytoscapeWindow ('saveLayout.test', graph=makeSimpleGraph())
displayGraph (cw)

layoutNetwork(cw, 'jgraph-circle')
restoreLayout (cw, 'layout.RData')
saveLayout (cw, 'layout2', timestamp.in.filename=TRUE)
**saveNetwork**

---

### Description

Write a network of the specified type to the specified file, at the specified scaling factor. Note: the file is written to the file system of the computer upon which Cytoscape is running, not R – in those cases where they are different.

### Usage

```
saveNetwork(obj, file.name, format='gml')
```

### Arguments

- **obj**: a `CytoscapeWindowClass` object.
- **file.name**: a `char` object.
- **format**: a `char` object. 'gml' is the only type currently supported.

### Value

None.

### Author(s)

Paul Shannon

### See Also

`saveImage`

### Examples

```r
cw <- new.CytoscapeWindow('saveNetwork.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)

#filename <- sprintf('%s/%s', tempdir (), 'saveNetworkTest.gml')
#not sure if this will work at bioc
#saveNetwork (cw, filename)
#print (sprintf ('gml file exists? %s', file.exists (filename)))
```
selectEdges

Description

Select the specified edges.

Usage

selectEdges(obj, edge.names, preserve.current.selection=TRUE)

Arguments

- obj: a CytoscapeWindowClass object.
- edge.names: a list of strings, the names of edges to select.
- preserve.current.selection: a logical object.

Value

None.

Author(s)

Paul Shannon

getSelectedEdges (cw)
  # more complicated, but more realistic:
  #selectEdges (cw, as.character ( cy2.en (g, names (which (eda (g, 'edgeType') == 'phosphorylates')))))
selectFirstNeighborsOfSelectedNodes

Description
Expand the selection by adding the first neighbors, in the Cytosape network, of the nodes currently selected (again, in the Cytoscape network). The R graph is unchanged.

Usage
selectFirstNeighborsOfSelectedNodes(obj)

Arguments
obj
a CytoscapeWindowClass object.

Value
None.

Author(s)
Paul Shannon

selectNodes(cw, 'A')
selectFirstNeighborsOfSelectedNodes(cw)
print(sort(getSelectedNodes(cw)))
# [1] "A" "B" "C"

selectNodes

Description
Select the specified nodes.

Usage
selectNodes(obj, node.names, preserve.current.selection=TRUE)
sendEdges

Arguments

obj a CytoscapeWindowClass object.
node.names a list of strings, the names of nodes to select.
preserve.current.selection a logical object.

Value
None.

Author(s)
Paul Shannon

clearSelection getSelectedNodeCount getSelectedNodes hideSelectedNodes

Examples

cw <- new.CytoscapeWindow ('selectNodes.test', graph=makeSimpleGraph())
clearSelection (cw)
selectNodes (cw, c ('A', 'B'))
gtaSelectedNodes (cw)
  # [1] "A" "B"

Description
Transfer the edges of the R graph (found in obj@graph) to Cytoscape. This method is not recommended for the average user. It is called behind the scenes by displayGraph.

Usage
sendEdges(obj)

Arguments

obj a CytoscapeWindowClass object.

Value
None.

Author(s)
Paul Shannon
**sendNodes**

**See Also**

displayGraph sendNodes

**Examples**

displayGraph sendEdges

**Examples**

```r
cw <- new.CytoscapeWindow ('sendNodes.test', graph=makeSimpleGraph())
sendNodes (cw)
```
**setCenter**

**Description**

This method can be used to pan and scroll the Cytoscape canvas, which is adjusted (moved) so that the specified x and y coordinates are at the center of the visible window.

**Usage**

```
setCenter(obj, x, y)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.
- `x` a numeric object.
- `y` a numeric object.

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

`getCenter` `getZoom` `setZoom`

**Examples**

```r
cw <- new.CytoscapeWindow (window.title, graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, "jgraph-spring")
original.center <- getCenter (cw) # named list, "x" and "y". initial values might be 140 and 90
# now pan the display to the left, by setting the the visual center
# to increasing values of x, without changing the location of the
# simple graph
setCenter (cw, 200, 90)
system ('sleep 1')
setCenter (cw, 300, 90)
system ('sleep 1')
setCenter (cw, 400, 90)
system ('sleep 1')
# and now pan back to the original position
setCenter (cw, 300, 90)
system ('sleep 1')
setCenter (cw, 200, 90)
system ('sleep 1')
setCenter (cw, original.center$x, original.center$y)
```
**setDescriptionColor**

**Description**

Retrieve the default color for the next CytoscapeWindow.

**Usage**

```
setDefaultBackgroundColor(obj, new.color, vizmap.style.name)
```

**Arguments**

- `obj` a CytoscapeConnectionClass object.
- `new.color` a character object, in quoted hexadecimal format
- `vizmap.style.name` a character object, 'default' by default

**Value**

A character string, eg "java.awt.Color[r=204,g=204,b=255]"

**Author(s)**

Paul Shannon

**Examples**

```
cy <- CytoscapeConnection ()
setDefaultBackgroundColor (cy, '#CCCC00')
```

**setDescriptionEdgeColor**

**Description**

In the specified CytoscapeConnection, stipulate the color for all edges other than those mentioned in an edge color rule.

**Usage**

```
setDefaultEdgeColor(obj, new.color, vizmap.style.name = "default")
```
setDefaultEdgeFontSize

**Arguments**

obj 
- a CytoscapeConnectionClass object.

new.size 
- an integer.

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

**Examples**

cw <- new.CytoscapeWindow ('setDefaultEdgeColor test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setDefaultEdgeColor (cw, '#FFFFFF') # white edges
redraw (cw)

setDefaultEdgeFontSize

In the specified CytoscapeConnection, stipulate the color for all edges other than those mentioned in an edge color rule.

**Usage**

setDefaultEdgeFontSize(obj, new.size)

**Arguments**

obj 
- a CytoscapeConnectionClass object.

new.size 
- an integer.

**Value**

None.
setDefaultEdgeLineWidth

Author(s)
Paul Shannon

setDefaultEdgeFontSize (cw, 66)
redraw (cw)

setDefaultEdgeLineWidth

setDefaultEdgeLineWidth

Description
In the specified CytoscapeConnection, stipulate the line width, in pixels for all edges.

Usage
setDefaultEdgeLineWidth(obj, new.width, vizmap.style.name = "default")

Arguments
obj a CytoscapeConnectionClass object.
new.width an integer object, typically from 0 to 5.
vizmap.style.name a String object.

Value
None.

Author(s)
Paul Shannon

See Also
Examples

```r
cw <- new.CytoscapeWindow ('setDefaultEdgeLineWidth.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setDefaultEdgeLineWidth (cw, 5)
redraw (cw)
```

**setDefaultEdgeReverseSelectionColor**

```r
setDefaultEdgeReverseSelectionColor
```

Description

Retrieve the default color used to display selected edges.

Usage

```r
setDefaultEdgeReverseSelectionColor(obj, new.color, vizmap.style.name)
```

Arguments

- `obj` a CytoscapeConnectionClass object.
- `new.color` a character object, in quoted hexadecimal format
- `vizmap.style.name` a character object, 'default' by default

Value

Nothing.

Author(s)

Paul Shannon

Examples

```r
cy <- CytoscapeConnection ()
print (setDefaultEdgeReverseSelectionColor (cy, '#FF0000'))
```
**setDefaultEdgeSelectionColor**

*setDefaultEdgeSelectionColor*

**Description**

Retrieve the default color used to display selected edges.

**Usage**

```
setDefaultEdgeSelectionColor(obj, new.color, vizmap.style.name)
```

**Arguments**

- **obj**: a CytoscapeConnectionClass object.
- **new.color**: a character object, in quoted hexadecimal format
- **vizmap.style.name**: a character object, `default` by default

**Value**

Nothing.

**Author(s)**

Paul Shannon

**Examples**

```r
cy <- CytoscapeConnection()
pin (setDefaultEdgeSelectionColor(cy, '#FF0000'))
```

---

**setDefaultNodeBorderColor**

*setDefaultNodeBorderColor*

**Description**

In the specified CytoscapeConnection, stipulate the color for all nodeBorders other than those mentioned in a node border color rule.

**Usage**

```
setDefaultNodeBorderColor(obj, new.color, vizmap.style.name = "default")
```
setDefaultNodeBorderWidth

Arguments

obj a CytoscapeConnectionClass object.
new.color a String object, a hex string, of the form '#RRGGBB'.
vizmap.style.name a String object.

Value

None.

Author(s)

Paul Shannon

See Also

Examples

cw <- new.CytoscapeWindow ("setDefaultNodeBorderColor.test", graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, "jgraph-spring")

redraw (cw)

Description

In the specified CytoscapeConnection, stipulate the color for all nodeBorders other than those mentioned in a node border color rule.

Usage

setDefaultNodeBorderWidth(obj, new.width, vizmap.style.name = "default")

Arguments

obj a CytoscapeConnectionClass object.
new.width a String object, a hex string, of the form '#RRGGBB'.
vizmap.style.name a String object.
**setDefaultNodeColor**

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

**Examples**

```r
 cw <- new.CytoscapeWindow ('setDefaultNodeBorderWidth.test', graph=makeSimpleGraph())
 displayGraph (cw)
 redraw (cw)
 layoutNetwork(cw, 'jgraph-spring')
 setDefaultNodeBorderWidth (cw, 5)
 redraw (cw)
```

**Description**

In the specified CytoscapeWindow, stipulate the color for all nodes other than those mentioned in a node border color rule.

**Usage**

```r
setDefaultNodeColor(obj, new.color, vizmap.style.name = "default")
```

**Arguments**

- **obj**  
  a CytoscapeConnectionClass object.
- **new.color**  
  a String object, a hex string, of the form '#RRGGBB'.
- **vizmap.style.name**  
  a String object.

**Value**

None.

**Author(s)**

Paul Shannon
setDefaultNodeFontSize

See Also

Examples

cw <- new.CytoscapeWindow ('setDefaultNodeColor.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setDefaultNodeColor (cw, '#8888FF') # light blue
redraw (cw)

Description
In the specified CytoscapeWindow, stipulate the color for all node borders other than those mentioned in a node border color rule.

Usage
setDefaultNodeFontSize(obj, new.size, vizmap.style.name = "default")

Arguments
obj a CytoscapeConnectionClass object.
new.size a String object, a hex string, of the form '#RRGGBB'.
vizmap.style.name
        a String object.

Value
None.

Author(s)
Paul Shannon

setDefaultNodeLabelColor

Examples

```r
cw <- new.CytoscapeWindow ('setDefaultNodeFontSize.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setDefaultNodeFontSize (cw, 32)
redraw (cw)
```

```r
setDefaultNodeLabelColor (cw, '#FFFFFF') # white node labels
redraw (cw)
```

Description

In the specified CytoscapeWindow, stipulate the color for all node labels. There is, at present, no mapping rule for this trait.

Usage

```r
setDefaultNodeLabelColor(obj, new.color, vizmap.style.name = "default")
```

Arguments

- `obj`: a CytoscapeConnectionClass object.
- `new.color`: a String object, a hex string, of the form '#RRGGBB'.
- `vizmap.style.name`: a String object.

Value

None.

redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setDefaultNodeLabelColor (cw, '#FFFFFF') # white node labels
redraw (cw)
```
setDefaultNodeReverseSelectionColor

Description
Retrieve the default color used to display selected nodes.

Usage
setDefaultNodeReverseSelectionColor(obj, new.color, vizmap.style.name)

Arguments
- obj: a CytoscapeConnectionClass object.
- new.color: a character object, in quoted hexadecimal format
- vizmap.style.name: a character object, 'default' by default

Value
Nothing.

Author(s)
Paul Shannon

Examples
```r
cy <- CytoscapeConnection()
print(setDefaultNodeReverseSelectionColor(cy, '#FF0000'))
```

setDefaultNodeSelectionColor

Description
Retrieve the default color used to display selected nodes.

Usage
setDefaultNodeSelectionColor(obj, new.color, vizmap.style.name)

Arguments
- obj: a CytoscapeConnectionClass object.
- new.color: a character object, in quoted hexadecimal format
- vizmap.style.name: a character object, 'default' by default
setDefaultNodeShape

Value

Nothing.

Author(s)

Paul Shannon

Examples

cy <- CytoscapeConnection()
prompt (setDefaultNodeSelectionColor (cy, '#FF0000'))

setDefaultNodeShape  setDefaultNodeShape

Description

For all CytoscapeWindow’s, specify the default node shape.

Usage

setDefaultNodeShape(obj, new.shape, vizmap.style.name = "default")

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>obj</td>
<td>a CytoscapeConnectionClass object.</td>
</tr>
<tr>
<td>new.shape</td>
<td>a String object, one of the permissible values (see getNodeShapes).</td>
</tr>
<tr>
<td>vizmap.style.name</td>
<td>a String object.</td>
</tr>
</tbody>
</table>

Value

None.

Author(s)

Paul Shannon

# stopifnot ('diamond' %in% legal.shapes)
setDefaultNodeShape (cw, 'diamond')
redraw (cw)

setDefaultNodeSize (cw, 60) # an intermediate value
redraw (cw)

Description

In the specified CytoscapeConnection, stipulate the color for all nodeBorders other than those mentioned in a node border color rule.

Usage

setDefaultNodeSize(obj, new.size, vizmap.style.name = "default")

Arguments

obj a CytoscapeConnectionClass object.
new.size a integer object, typically 20 to 100.
vizmap.style.name a String object.

Value

None.

Author(s)

Paul Shannon

See Also

Examples

cw <- new.CytoscapeWindow ('setDefaultNodeSize.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setDefaultNodeSize (cw, 60) # an intermediate value
redraw (cw)
setEdgeAttributes

Description
Transfer the named edge attribute from the R graph (found in obj@graph) to Cytoscape. This method is typically called by displayGraph, which will suffice for most users’ needs. It transfers the specified edge attributes, for all edges, from the cw@graph slot to Cytoscape.

Usage
setEdgeAttributes(obj, attribute.name)

Arguments
- obj: a CytoscapeWindowClass object.
- attribute.name: a string one of the attributes defined on the edges.

Value
None.

Author(s)
Paul Shannon

See Also
setEdgeAttributesDirect setNodeAttributes setNodeAttributesDirect

Examples

```r
cw <- new.CytoscapeWindow('setEdgeAttributes.test', graph=makeSimpleGraph())
attribute.names = eda.names (cw@graph)
for (attribute.name in attribute.names)
  result = setEdgeAttributes (cw, attribute.name)
```

setEdgeAttributesDirect

Description
Transfer the named edge attribute to Cytoscape. This method is required, for instance, if you wish to run a ‘movie.’ For example, if you have a timecourse experiment, with different values at successive time points of the ‘phosphorylates’ or ‘binds’ relationship between two nodes. With an edgeColor rule already specified, you can animate the display of the edges in the graph by pumping new values of the edge attributes, and then asking for a redraw. An example of such edge-attribute-driven animation can be found here....[todo].
Usage

setEdgeAttributesDirect(obj, attribute.name, attribute.type, edge.names, values)

Arguments

obj a CytoscapeWindowClass object.
attribute.name a string one of the attributes defined on the edges.
attribute.type a string from one of these three groups: (floating, numeric, double), (integer, int), (string, char, character). This parameter is required because RCytoscape cannot always infer the type of an attribute.
edge.names a list of strings, edge names
values a list of objects of the type specified by 'attribute.name', one per edge

Value

None.

Author(s)

Paul Shannon

See Also

setEdgeAttributes setNodeAttributes setNodeAttributesDirect

Examples

cw <- new.CytoscapeWindow ('setEdgeAttributesDirect.test', graph=makeSimpleGraph())
edge.names = as.character (cy2.edge.names (cw@graph))
stopifnot (length (edge.names) == 3)
edge.values = c ('alligator', 'hedgehog', 'anteater')
result = setEdgeAttributesDirect (cw, 'misc', 'string', edge.names, edge.values)

---

Description

In the specified CytoscapeWindow, set the color of the specified edge or edges.

Usage

setEdgeColorDirect(obj, edge.names, new.value)

Arguments

obj a CytoscapeWindowClass object.
edge.names one or more String objects, cy2-style edge names.
new.value a numeric object, a color in hex notation.
**setEdgeColorRule**

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

setNodeColorDirect

**Examples**

```r
cw <- new.CytoscapeWindow ('setEdgeColorDirect.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
edge.names = as.character (cy2.edge.names (cw@graph))[1:2]
setEdgeColorDirect (cw, edge.names, '#F833AA')
redraw (cw)
```

**Description**

Specify how data attributes – for the specified named attribute – is mapped to edge color.

**Usage**

```r
setEdgeColorRule(obj, edge.attribute.name, control.points, colors, mode, default.color='#FFFFFF')
```

**Arguments**

- `obj` a CytoscapeWindowClass object.
- `edge.attribute.name` the edge attribute whose values will, when this rule is applied, determine the color of each edge.
- `control.points` a list of values, either numeric (for interpolate mode) or character strings (for 'lookup' mode).
- `colors` a list of colors, expressed as hexadecimal RGB, like this: '#FF0000' or '#FA8800'
- `mode` either 'interpolate' or 'lookup'.
- `default.color` a String object, expressed in hexadecimal RGB, like this: '#FF0000' or '#FA8800'

**Value**

None.
setEdgeFontSizeDirect

Description

In the specified CytoscapeWindow, set the opacity of the specified edge or edges. Low numbers, near zero, are transparent. High numbers, near 255, are maximally opaque: they are fully visible.

Usage

setEdgeFontSizeDirect(obj, edge.names, new.value)

Arguments

- obj: a CytoscapeWindowClass object.
- edge.names: one or more String objects, cy2-style edge names.
- new.value: an integer objects, specifying font size in pixels.

Value

None.

redraw (cw)
layoutNetwork(cw, "jgraph-spring")
edge.names = as.character (cy2.edge.names (cw@graph)) [1:2]
setEdgeLabelColorDirect (cw, edge.names, '#FF0000')
redraw (cw)
setEdgeLabelColorDirect (cw, edge.names, '#00FF00')
redraw (cw)
setEdgeLabelColorDirect (cw, edge.names, '#000000')
redraw (cw)
```

setEdgeLabelDirect  setEdgeLabelDirect

Description

In the specified CytoscapeWindow, set the edgeLabel of the specified edge or edges.

Usage

`setEdgeLabelDirect(obj, edge.names, new.value)`

Arguments

- `obj` a CytoscapeWindowClass object.
- `edge.names` one or more String objects, cy2-style edge names.
- `new.value` a string object, the new label.

Value

None.

Author(s)

Paul Shannon

  redraw (cw)
}
```
for (i in 1:10) {
    setEdgeLabelOpacityDirect (cw, edge.names, i * 25)
    redraw (cw)
}

Description

Specify the edge attribute to be used as the label displayed on each edge. Non-character attributes are converted to strings before they are used.

Usage

setEdgeLabelRule(obj, edge.attribute.name)

Arguments

obj a CytoscapeWindowClass object.
edge.attribute.name the edge attribute whose values will, when this rule is applied, determine the edgeLabel on each edge.

Value

None.

Author(s)

Paul Shannon

Examples

layoutNetwork(cw, 'jgraph-spring')
edges.of.interest <- as.character (cy2.edge.names (cw@graph))
supported.styles <- getLineStyles (cw)

# pass three edges and three styles
setEdgeLineStyleDirect (cw, edges.of.interest, supported.styles [5:7])
redraw (cw)
```
setEdgeLineStyleRule

specify the line styles to be used in drawing edges

Description
Specify how data attributes – for the specified named attribute – are mapped to edge line style.

Usage
setEdgeLineStyleRule(obj, edge.attribute.name, attribute.values, line.styles, default.style='SOLID')

Arguments
obj
a CytoscapeWindowClass object.
edge.attribute.name
the edge attribute whose values will, when this rule is applied, determine the lineStyle of each edge.
attribute.values
A list of scalar, discrete values. For instance, interaction types: 'phosphorylates', 'ubiquinates', 'represses', 'activates'
line.styles
One line style for each of the attribute.values
default.style
The style to use when an explicit mapping is not provided.

Value
None.

Author(s)
Paul Shannon

edge.names = as.character (cy2.edge.names (cw@graph))[1:2]
for (i in 1:10) {
  setEdgeLineWidthDirect (cw, edge.names, i)
  redraw (cw)
}
```
Description

Specify the edge attribute which controls the thickness of the edges displayed in the graph. This is currently only a lookup mapping. An interpolated mapping will be added in the future.

Usage

```
setEdgeLineWidthRule(obj, edge.attribute.name, attribute.values, line.widths, default.width)
```

Arguments

- `obj` a CytoscapeWindowClass object.
- `edge.attribute.name` the edge attribute whose values will, when this rule is applied, determine the edgeLineWidth on each edge.
- `attribute.values` observed values of the specified attribute on the edges.
- `line.widths` the corresponding widths.
- `default.width` use this where the rule fails to apply

Value

None.

Author(s)

Paul Shannon

Examples

```
cw <- new.CytoscapeWindow ('setEdgeLineWidthRule.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
edge.attribute.values = c ('phosphorylates', 'synthetic lethal', 'undefined')
line.widths = c (8, 8, 16)
setEdgeLineWidthRule (cw, 'edgeType', edge.attribute.values, line.widths)
```
Description

In the specified CytoscapeWindow, set the opacity of the specified edge or edges. Low numbers, near zero, are transparent. High numbers, near 255, are maximally opaque: they are fully visible.

Usage

setEdgeOpacityDirect(obj, edge.names, new.values)

Arguments

obj a CytoscapeWindowClass object.
edge.names one or more String objects, cy2-style edge names.
new.values a numeric object, ranging from 0 to 255.

Value

None.

  redraw (cw)
}
for (i in 1:10) {
  setEdgeOpacityDirect (cw, edge.names, i * 25)
  redraw (cw)
}```
setEdgeOpacityRule

Description

Specify how data attributes – for the specified named attribute – is mapped to edge opacity.

Usage

setEdgeOpacityRule(obj, edge.attribute.name, control.points, opacities, mode)

Arguments

obj a CytoscapeWindowClass object.
edge.attribute.name the edge attribute whose values will, when this rule is applied, determine the opacity of each edge.
control.points a list of values, either numeric (for interpolate mode) or character strings (for 'lookup' mode).
opacities a list of opacity values, integers between 0 (invisible) and 255 (completely visible)
mode either 'interpolate' or 'lookup'.

Value

None.

**setEdgeSourceArrowColorRule**

*Specify Rule for the Source Arrow Color*

**Description**

Specify how edge attributes – that is, data values of the specified edge attribute – control the color of the source arrow, found at the end of an edge, where it connects to the source node.

**Usage**

```r
setEdgeSourceArrowColorRule(obj, edge.attribute.name, attribute.values, colors, default.color="#000000")
```

**Arguments**

- **obj**
  - A CytoscapeWindowClass object.
- **edge.attribute.name**
  - The edge attribute whose values will, when this ColorRule is applied, determine the color of the source arrow for each edge.
- **attribute.values**
  - A list of scalar, discrete values. For instance, interaction types: 'phosphorylates', 'ubiquinates', 'represses', 'activates'
- **colors**
  - A color for each of the attribute.values
- **default.color**
  - The color to use when an explicit mapping is not provided. (Note: this is broken in Cytoscape 2.7)

**Value**

None.

**Author(s)**

Paul Shannon
setEdgeSourceArrowOpacityDirect

Description

In the specified CytoscapeWindow, set the opacity of the source arrow of the specified edge or
dges. Opacity is an integer between 0 (invisible) and 255 (fully rendered).

Usage

setEdgeSourceArrowOpacityDirect(obj, edge.names, new.values)

Arguments

obj a CytoscapeWindowClass object.
edge.names one or more cy2-style edge names, String objects.
new.values one or more integer objects, between 0 and 255.

Value

None.

setGraph

Description
Assigns the supplied graph object to the appropriate slot in the specified CytoscapeWindow object.

Usage
setGraph(obj, graph)

Arguments
- obj: a CytoscapeWindowClass object.
- graph: a graph object.
setLayoutProperties

**Value**

The modified CytoscapeWindow object.

**Author(s)**

Paul Shannon

**Examples**

```r
cw <- new.CytoscapeWindow('setGraph.test') # an empty graph is created by default
graph <- makeSimpleGraph()
setGraph (cw, graph)
print (length (nodes (getGraph (cw))))
```

**Description**

Sets the specified properties for the specified layout. Unmentioned properties are left unchanged.

**Usage**

```r
setLayoutProperties(obj, layout.name, properties.list)
```

**Arguments**

- `obj`: a CytoscapeConnectionClass object.
- `layout.name`: a string object.
- `properties.list`: a named list with as many entries as you wish to modify

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

- getLayoutPropertyType
- getLayoutPropertyValue
Examples

```r
setNodeAttributesDirect (cw, attribute.name)
```

Description

Transfer the named node attribute from the R graph (found in obj@graph) to Cytoscape. This method is typically called by displayGraph, which will suffice for most users' needs. It transfers the specified node attributes, for all nodes, from the cw@graph slot to Cytoscape.

Usage

```r
setNodeAttributes (obj, attribute.name)
```

Arguments

- `obj`: a CytoscapeWindowClass object.
- `attribute.name`: a string one of the attributes defined on the nodes.

Value

None.

Author(s)

Paul Shannon

setNodeAttributesDirect setEdgeAttributes setEdgeAttributesDirect sendEdges sendNodes displayGraph

Examples

```r
cw <- new.CytoscapeWindow ('setNodeAttributes.test', graph=makeSimpleGraph())
attribute.names = noa.names (cw@graph)
for (attribute.name in attribute.names)
result = setNodeAttributes (cw, attribute.name)
```
**setNodeAttributesDirect**

Transfer the named node attribute, for all named nodes, to Cytoscape. The attribute must be previously defined on the nodes of the graph: see nodeDataDefaults in the graph class. This method is useful if you wish to run a 'movie.' For example, if you have a timecourse experiment, with different values at successive time points of the 'lfc' (log fold change) measurements or 'pValue' of each node. With a nodeColor and nodeSize rule already specified, you can animate the display of the nodes across time in the graph by pumping new values of the attributes attributes using this method, and then asking for a redraw. An example of such node-attribute-driven animation can be found here....[todo].

**Usage**

```r
setNodeAttributesDirect(obj, attribute.name, attribute.type, node.names, values)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.
- `attribute.name` a string one of the attributes defined on the nodes.
- `attribute.type` a string from one of these three groups: (floating, numeric, double), (integer, int), (string, char, character). This parameter is required because RCytoscape cannot always infer the type of an attribute.
- `node.names` a list of strings, node names
- `values` a list of objects of the type specified by 'attribute.name', one per node

**Value**

None.

**Author(s)**

Paul Shannon

cw <- new.CytoscapeWindow ('setNodeBorderColorDirect.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setNodeBorderColorDirect (cw, 'A', '#FFFF00')
redraw (cw)
```
**setNodeBorderColorRule**

**Description**

Specify how data attributes – for the specified named attribute – are mapped to node color. There are two modes: 'interpolate' and 'lookup'. In the former, you specify data values ('control points') and colors; when a node’s corresponding data attribute value is exactly that of a control point, the specified color is used. If the node’s data attribute falls between control points, then the color is interpolated. Note! In the 'interpolate' mode, you almost always want to provide two additional colors: one for node data values falling below the minimum control point, one for node data values falling above the maximum control point. If you provide an equal number of colors and control points, the default.color is used to paint nodes above and below the specified range. A useful data exploration strategy would be to use default.color <- '#000000' causing all extreme nodes to be painted black.

The 'lookup' mode provides no interpolation, and is useful when you have a node attribute with a finite set of discrete values, each of which you want to display in a specific color. For example: render all receptors in yellow, all transcription factors in blue, and all kinases in dark red.

**Usage**

setNodeBorderColorRule(obj, node.attribute.name, control.points, colors, mode, default.color='#000000')

**Arguments**

- **obj** a CytoscapeWindowClass object.
- **node.attribute.name** the node attribute whose values will, when this rule is applied, determine the color of each node.
- **control.points** a list of values. In the interpolate mode, a typical choice is the minimum, the maximum, some sensible midpoint.
- **colors** a list of colors, either two more than the number of control points (if mode='interpolate'), in which case the first color is used for all attributes values below the minimum, and the last color is used for those above the maximum. Or, if mode='lookup', the same number of colors as control.points are expected. Colors are expressed as quoted hexadecimal RGB strings, e.g., '#FF0000' or '#FA8800'
- **mode** 'interpolate' or 'lookup'. This roughly corresponds to the visual mapping of continuously varying data (i.e., lfc or pValue), versus visual mapping of discrete data (i.e., molecule type, or phosphorylation status). With the interpolation mode, you must specify n+2 colors: adding a 'below' and an 'above' color. In lookup mode, specify exactly as many control.points as colors. If are data attribute values are found on the nodes which do not appear in your list, they will displayed in the default color.
- **default.color** '#000000' (black) by default, to catch your eye. Used primarily in mode='lookup' and in mode='interpolate' if you fail to specify 'above' and 'below' values.

**Value**

None.

**Examples**

```r
cw <- new.CytoscapeWindow ('setNodeBorderColorRule.test', graph=makeSimpleGraph())
control.points <- c (-3.0, 0.0, 3.0)  # typical range of log-fold-change ratio values
# paint negative values shades of green, positive values shades of red, out-of-range low values are dark green; out-of-range high values are dark red
colors <- c ("#00AA00", "#00FF00", "#FFFFFF", "#FF0000", "#AA0000")
setNodeBorderColorRule (cw, node.attribute.name='lfc', control.points, colors, mode='interpolate')
redraw (cw)
data.values <- c ("kinase", "transcription factor", "glycoprotein")
colors <- c ("#0000AA", "#FFFF00", "#0000AA")
setNodeBorderColorRule (cw, node.attribute.name='type', data.values, colors, mode='lookup', default.color="#AA0000")
```

---

**setNodeBorderOpacityDirect**

**setNodeBorderOpacityDirect**

**Description**

In the specified CytoscapeWindow, set the opacity of the border of the specified node.

**Usage**

```r
setNodeBorderOpacityDirect(obj, node.names, new.values)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.
- `node.names` one or more String objects.
- `new.values` a numeric object, ranging from 0 to 255.

**Value**

None.

**Author(s)**

Paul Shannon

**See Also**

**setNodeBorderWidthDirect**

**Examples**

```r
cw <- new.CytoscapeWindow ('setNodeBorderOpacityDirect.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setNodeBorderOpacityDirect (cw, 'A', 220)
redraw (cw)

setNodeBorderWidthDirect (cw, 'A', 10)
redraw (cw)
```

**Description**

In the specified CytoscapeWindow, set the width of the border of the specified node.

**Usage**

```r
setNodeBorderWidthDirect(obj, node.names, new.sizes)
```

**Arguments**

- `obj` a CytoscapeWindowClass object.
- `node.names` one or more String objects.
- `new.sizes` an integer, in pixel units.

**Value**

None.

**Author(s)**

Paul Shannon

setNodeSizeDirect

**Examples**

```r
cw <- new.CytoscapeWindow ('setNodeBorderWidthDirect.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setNodeBorderOpacityDirect (cw, 'A', 220)
redraw (cw)
```
setNodeBorderWidthRule

Description

Specify the node attribute which controls the thickness of the nodes displayed in the graph. This is currently only a lookup mapping. An interpolated mapping will be added in the future.

Usage

setNodeBorderWidthRule(obj, node.attribute.name, attribute.values, line.widths, default.width)

Arguments

obj
  a CytoscapeWindowClass object.
node.attribute.name
  the node attribute whose values will, when this rule is applied, determine the nodeBorderWidth on each node.
attribute.values
  observed values of the specified attribute on the nodes.
line.widths
  the corresponding widths.
default.width
  use this where the rule fails to apply

Value

None.

Author(s)

Paul Shannon

Examples

cw <- new.CytoscapeWindow ('setNodeBorderWidthRule.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
node.attribute.values = c ('kinase', 'transcription factor', 'glycoprotein')
line.widths = c (0, 8, 16)
setNodeBorderWidthRule (cw, 'type', node.attribute.values, line.widths)
Description

In the specified CytoscapeWindow, set the color of the specified node or nodes. This method bypasses the vizmap, and excludes this node, for the duration of the current Cytoscape session, from further manipulation by vizmap color rules.

Usage

```
setNodeColorDirect(obj, node.names, new.color)
```

Arguments

- **obj**: a `CytoscapeWindowClass` object.
- **node.names**: a `String` list object.
- **new.color**: an `String` object, using the standard hexadecimal form, eg, '#FF88AA'

Value

None.

Examples

```
cw <- new.CytoscapeWindow ('setNodeColorDirect.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setNodeColorDirect (cw, 'A', '#880000')
redraw (cw)
```
Description

Specify how data attributes – for the specified named attribute – are mapped to node color. There are two modes: 'interpolate' and 'lookup'. In the former, you specify data values ('control points') and colors; when a node’s corresponding data attribute value is exactly that of a control point, the specified color is used. If the node’s data attribute falls between control points, then the color is interpolated. Note! In the 'interpolate' mode, you almost always want to provide two additional colors: one for node data values falling below the minimum control point, one for node data values falling above the maximum control point. If you provide an equal number of colors and control points, the default.color is used to paint nodes above and below the specified range. A useful data exploration strategy would be to use default.color <- '#000000' causing all extreme nodes to be painted black.

The 'lookup' mode provides no interpolation, and is useful when you have a node attribute with a finite set of discrete values, each of which you want to display in a specific color. For example: render all receptors in yellow, all transcription factors in blue, and all kinases in dark red.

Usage

setNodeColorRule(obj, node.attribute.name, control.points, colors, mode, default.color='#FFFFFF')

Arguments

- obj: a CytoscapeWindowClass object.
- node.attribute.name: the node attribute whose values will, when this rule is applied, determine the color of each node.
- control.points: a list of values. In the interpolate mode, a typical choice is the minimum, the maximum, some sensible midpoint.
- colors: a list of colors, either two more than the number of control points (if mode='interpolate'), in which case the first color is used for all attributes values below the minimum, and the last color is used for those above the maximum. Or, if mode='lookup', the same number of colors as control.points are expected. Colors are expressed as quoted hexadecimal RGB strings, e.g., '#FF0000' or '#FA8800'.
- mode: 'interpolate' or 'lookup'. This roughly corresponds to the visual mapping of continuously varying data (i.e., lfc or pValue), versus visual mapping of discrete data (i.e., molecule type, or phosphorylation status). With the interpolation mode, you must specify n+2 colors: adding a 'below' and an 'above' color. In lookup mode, specify exactly as many control.points as colors. If are data attribute values are found on the nodes which do not appear in your list, they will displayed in the default color.
- default.color: '#000000' (black) by default, to catch your eye. Used primarily in mode=='lookup' and in mode='interpolate' if you fail to specify 'above' and 'below' values.

Value

None.

Examples

```r
cw <- new.CytoscapeWindow ('setNodeColorRule.test', graph=makeSimpleGraph())
control.points <- c(-3.0, 0.0, 3.0)  # typical range of log-fold-change ratio values
# paint negative values shades of green, positive values shades of
# red, out-of-range low values are dark green; out-of-range high
# values are dark red
node.colors <- c("#00AA00", "#00FF00", "#FFFFF", "#FF0000", "#AA0000")
setNodeColorRule (cw, node.attribute.name='lfc', control.points, node.colors, mode='interpolate')
displayGraph (cw)
redraw (cw)
data.values <- c("kinase", "transcription factor", "glycoprotein")
node.colors <- c("#0000AA", "#FFFFF", "#0000AA")
setNodeColorRule (cw, node.attribute.name='type', data.values, node.colors, mode='lookup', default.color="#AA0000")
```

**Description**

In the specified CytoscapeWindow, set the opacity of the fill color of the specified node.

**Usage**

```r
setNodeFillOpacityDirect(obj, node.names, new.values)
```

**Arguments**

- **obj**: a CytoscapeWindowClass object.
- **node.names**: one or more String objects.
- **new.values**: a numeric object, ranging from 0 to 255.

**Value**

None.

cw <- new.CytoscapeWindow ('setNodeOpacityDirect.test', graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setNodeOpacityDirect (cw, 'A', 220)
redraw (cw)
```
setNodeOpacityRule

**Description**

Specify how data attributes – for the specified named attribute – are mapped to node opacity. There are two modes: 'interpolate' and 'lookup'. In the former, you specify data values ('control points') and opacities; when a node’s corresponding data attribute value is exactly that of a control point, the specified opacity is used. If the node’s data attribute falls between control points, then the opacity is interpolated.

The 'lookup' mode provides no interpolation, and is useful when you have a node attribute with a finite set of discrete values, each of which you want to display in a specific opacity. For example: render all receptors with full brightness, all transcription factors faded by 50%

**Usage**

```
setNodeOpacityRule(obj, node.attribute.name, control.points, opacities, mode, aspect='all')
```

**Arguments**

- **obj**: a CytoscapeWindowClass object.
- **node.attribute.name**: the node attribute whose values will, when this rule is applied, determine the opacity of each node.
- **control.points**: a list of values. In interpolate mode, a typical choice is the minimum, the maximum, some sensible midpoint.
- **opacities**: a list of opacities, either two more than the number of control points (if mode='interpolate'), in which case the first opacity is used for all attributes values below the minimum, and the last opacity is used for those above the maximum. Or, if mode='lookup', the same number of opacities as control.points are expected. Opacities are expressed as integers in the range 0:255, from invisible to fully bright rendering.
- **mode**: 'interpolate' or 'lookup'. This roughly corresponds to the visual mapping of continuously varying data (i.e., lfc or pValue), versus visual mapping of discrete data (i.e., molecule type, or phosphorylation status). With the interpolation mode, you must specify n+2 opacities: adding a 'below' and an 'above' opacity. In lookup mode, specify exactly as many control.points as opacities. If are data attribute values are found on the nodes which do not appear in your list, they will displayed in the default opacity.
- **aspect**: a character string, with one or more of these values: 'border', 'label', 'fill', 'all'. The first three aspects describe elements of the displayed node: its border, its text label, and its body (or 'fill'). 'all' implies that all elements (border, label and fill) will be operated upon, equally, by this rule. If you want, for instance, the node label (its displayed name) to be visible even if the border and fill are dim, then use 'border, fill' as the aspect.

**Value**

None.

opacities <- c (128, 80, 255)
setNodeOpacityRule (cw, node.attribute.name='lfc', control.points, opacities, mode='interpolate', aspect='all');
redraw (cw)
# now restore full opacities
gene.types <- c ('kinase', 'transcription factor', 'glycoprotein')
setNodeOpacityRule (cw, 'type', gene.types, c (255, 255, 255), mode='lookup', aspect='all');
redraw (cw)
# leaving node labels fully opaque -- fully visible -- change border and fill opacity
opacities <- c (10, 80, 255)
setNodeOpacityRule (cw, node.attribute.name='type', gene.types, opacities, mode='lookup', aspect='border,fill');
redraw (cw)

Description

Set the position of the specified nodes on the CytoscapeWindow canvas. Use this for any hand-crafted layouts, or novel layout algorithms, you wish to use.

Usage

setNodePosition(obj, node.names, x.coords, y.coords)

Arguments

obj a CytoscapeWindowClass object.
node.names a list of strings, the names of nodes to select.
x.coords a list of floating point numbers, one for each node in the node.names list.
y.coords a list of floating point numbers, one for each node in the node.names list.

Value

None.

layoutNetwork(cw, 'jgraph-spring')
setNodeSizeDirect (cw, 'A', 32)
redraw (cw)
```
**setNodeSizeRule**

Description

Specify how data attributes how the specified node attribute values determine the node size.

Usage

```
setNodeSizeRule (obj, node.attribute.name, control.points, node.sizes, mode, default.size=40)
```

Arguments

- **obj**: a CytoscapeWindowClass object.
- **node.attribute.name**: the node attribute whose values will, when this rule is applied, determine the size of each node.
- **control.points**: A list of (currently, exactly 3) values, which specify the 'control points' to control the coloring of nodes.
- **node.sizes**: The nodes sizes which correspond to the control points.
- **mode**: 'interpolate’ or 'lookup’. This roughly corresponds to the visual mapping of continuously varying data (i.e., lfc or pValue), versus visual mapping of discrete data (i.e., molecule type, or phosphorylation status). With the interpolation mode, you must specify n+2 colors: adding a 'below' and an 'above' color. In lookup mode, specify exactly as many control.points as colors. If are data attribute values are found on the nodes which do not appear in your list, they will displayed in the default color.
- **default.size**: the size of nodes not otherwise specified. Does not work in Cytoscape 2.7.

Value

None.

```
cw <- new.CytoscapeWindow ("setNodeSizeRule.test", graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, "jgraph-spring")
redraw (cw)
control.points <- c (10, 30, 80)
node.sizes <- c (20, 50, 80)
node.attribute.name <- "count"  # previously defined, has values which range between 2 and 100
```
# remind yourself of the values of count on each of the three nodes
print (noa (getGraph (cw), 'count'))
# A.A B.B C.C
# "2" "30" "100"
setNodeSizeRule (cw, node.attribute.name, control.points, node.sizes, mode='interpolate')  # a warning is issued

# now make a new rule. explicitly specify below and above sizes
node.sizes <- c (1, 20, 50, 80, 200)  # anything below 20 will have size of 1; anything above 80 will be 200
setNodeSizeRule (cw, node.attribute.name, control.points, node.sizes, mode='interpolate')  # a warning is issued

# now use a mode='lookup' rule. specify a size for two of the molecule types
# look to see that the third type, glycoprotein, gets the tiny default.size of 5
molecule.types <- c ('kinase', 'transcription factor')
node.sizes <- c (60, 80)
setNodeSizeRule (cw, 'type', molecule.types, node.sizes, default.size= 5, mode='lookup')
redraw (cw)

---

**Description**

Specify the node attribute to be used as the tooltip for each node. Non-character attributes are converted to strings before they are used as tooltips.

**Usage**

```r
setNodeTooltipRule(obj, node.attribute.name)
```

**Arguments**

- `obj` — A CytoscapeWindowClass object.
- `node.attribute.name` — The node attribute whose values will, when this rule is applied, determine the tooltip on each node.

**Value**

None.

**Author(s)**

Paul Shannon
Examples

```r
cw <- new.CytoscapeWindow ('setNodeWidthDirect.test', graph=makeSimpleGraph())
displayGraph (cw)
layoutNetwork(cw, 'jgraph-spring')
redraw (cw)
setNodeWidthDirect (cw, 'A', 32)
```

Description

In the specified CytoscapeWindow, set the width of the specified node. Not that the node dimensions (width and width) must be unlocked for this to work. If they ARE locked, then node and width change together, as specified by a node size rule, or the setNodeSize method.

Usage

```r
setNodeWidthDirect(obj, node.names, new.widths)
```

Arguments

- `obj` a CytoscapeWindowClass object.
- `node.names` one or more String objects.
- `new.widths` one or more integer objects, in pixel units.

Value

None.

  displayGraph (cw)
  redraw (cw)
  layoutNetwork(cw, 'jgraph-spring')
  # have the tooltips popup right away, as soon as the mouse hovers
  # over a node or edge, and then stay up as long as the mouse
  # remains on top of that node or edge
  setTooltipInitialDelay (cw, 0)
  setTooltipDismissDelay (cw, 0)
```
setVisualStyle

Description

Cytoscape provides a number of canned visual styles. You can also create your own. Use this method to establish an (already-defined) visual style as the style which governs the display of a network in the specified CytoscapeWindow object.

Usage

setVisualStyle(obj, new.style.name)

Arguments

obj a CytoscapeWindowClass object.
new.style.name a character string specifying the name of an existing style you wish to use.

Value

Nothing.

Author(s)

Paul Shannon

See Also

getVisualStyleNames copyVisualStyle

Examples

```r
window.name = 'demo.setVisualStyle'
cw = new.CytoscapeWindow (window.name, graph=makeSimpleGraph ())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw)

styles = getVisualStyleNames (cw)
# now cycle through the currently defined styles
for (style in styles) {
  print (paste ('about to set new style:', style))
  setVisualStyle (cw, style)
}
```
setWindowSize

Description

Control the size of the CytoscapeWindow by specifying a width and height. On a typical screen, there may be 1200 pixels in the width of a full-size window, and 800 pixels in height.

Usage

setWindowSize(obj, width, height)

Arguments

obj a CytoscapeWindowClass object.
width a numeric object.
height a numeric object.

Value

None.

Author(s)

Paul Shannon

See Also

getZoom setZoom getCenter setCenter getViewCoordinates fitContent

Examples

window.title = 'setWindowSize demo'
cw <- new.CytoscapeWindow (window.title, graph=makeSimpleGraph())displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setWindowSize (cw, 1200, 800)
fitContent (cw)
system ('sleep 1')
setWindowSize (cw, 120, 80)
system ('sleep 1')
setWindowSize (cw, 600, 400)
fitContent (cw)
setZoom

Description

This method expands or contracts the relative size of the objects (the graph) displayed in the CytoscapeWindow. A value of 1.0 typically renders the graph with an ample margin. A call to fitContent produces a zoom level of about 1.5.

Usage

setZoom(obj, new.level)

Arguments

obj a CytoscapeWindowClass object.
new.level a numeric object.

Value

None.

Author(s)

Paul Shannon

See Also

getZoom getCenter setCenter getViewCoordinates fitContent

Examples

window.title = 'setZoom demo'
cw <- new.CytoscapeWindow (window.title, graph=makeSimpleGraph())
displayGraph (cw)
redraw (cw)
layoutNetwork(cw, 'jgraph-spring')
setZoom (cw, 0.3)
system ('sleep 1')
setZoom (cw, 3.0)
system ('sleep 1')
setZoom (cw, 1.0)
**showGraphicsDetails**

**Description**
For all windows, and regardless of the current zoom level, display or hide graphics details – of which node labels are the most obvious example.

**Usage**
`showGraphicsDetails(obj, new.value)`

**Arguments**
- `obj` a `CytoscapeConnectionClass` object.
- `new.value` a logical object, TRUE or FALSE.

**Value**
None.

**Author(s)**
Paul Shannon

**Examples**
```
cy <- CytoscapeConnection()
showGraphicsDetails(cy, TRUE)
```

**unhideAll**

**Description**
Currently (in Cytoscape 2.7) broken. The redisplay of hidden nodes and edges does not always work...

**Usage**
`unhideAll(obj)`

**Arguments**
- `obj` a `CytoscapeWindowClass` object.

**Value**
None.
