Package ‘RTCGA’

April 26, 2017

Title The Cancer Genome Atlas Data Integration
Version 1.6.0
Date 2016-09-29
Author Marcin Kosinski <m.p.kosinski@gmail.com>, Przemyslaw Biecek <przemyslaw.biecek@gmail.com>
Maintainer Marcin Kosinski <m.p.kosinski@gmail.com>
Description The Cancer Genome Atlas (TCGA) Data Portal provides a platform for researchers to search, download, and analyze data sets generated by TCGA. It contains clinical information, genomic characterization data, and high level sequence analysis of the tumor genomes. The key is to understand genomics to improve cancer care. RTCGA package offers download and integration of the variety and volume of TCGA data using patient barcode key, what enables easier data possession. This may have an beneficial influence on impact on development of science and improvement of patients' treatment. Furthermore, RTCGA package transforms TCGA data to tidy form which is convenient to use.

biocViews Software, DataImport, DataRepresentation, Preprocessing, RNASeq
The Cancer Genome Atlas (TCGA) Data Portal provides a platform for researchers to search, download, and analyze data sets generated by TCGA. It contains clinical information, genomic characterization data, and high level sequence analysis of the tumor genomes. The key is to understand genomics to improve cancer care. RTCGA package offers download and integration of the variety and volume of TCGA data using patient barcode key, what enables easier data possession. This may have an benefcial infuence on impact on development of science and improvement of patients’ treatment. Furthermore, RTCGA package transforms TCGA data to form which is convenient to use in R statistical package. Those data transformations can be a part of statistical analysis pipeline which can be more reproducible with RTCGA.

For more detailed information visit RTCGA wiki on Github.

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

boxplotTCGA

Create Boxplots for TCGA Datasets

Description

Function creates boxplots (geom_boxplot) for TCGA Datasets.

Usage

boxplotTCGA(data, x, y, fill = x, coord.flip = TRUE, facet.names = NULL, ylab = y, xlab = x, legend.title = xlab, legend = "top", ...)

Arguments

data A data.frame from TCGA study containing variables to be plotted.
x A character name of variable containing groups.
y A character name of continous variable to be plotted.
fill A character names of fill variable. By default, the same as x.
coord.flip Whether to flip coordinates.
facet.names A character of length maximum 2 containing names of variables to produce facets. See examples.
ylab The name of y label. Remember about coord.flip.
xlab The name of x label. Remember about coord.flip.
legend.title A character with legend’s title.
legend A character specifying legend position. Allowed values are one of c("top", "bottom", "left", "right", "none"). Default is "top" side position. to remove the legend use legend = "none".
... Further arguments passed to geom_boxplot.
Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

  legend.title = "Cohorts", legend = "bottom",
  facet.names = c("TP53"))

boxplotTCGA(ACC_BLCA_BRCA_OV.rnaseq_TP53mutations,
  "reorder(cohort,log1p(MET), median)", "log1p(MET)",
  xlab = "Cohort Type", ylab = "Logarithm of MET",
  legend.title = "Cohorts", legend = "bottom",
  fill = c("TP53"))

---

**checkTCGA**

*Information about datasets from TCGA project*

**Description**

The checkTCGA function let’s to check

- **DataSets**: TCGA datasets’ names for current release date and cohort.
- **Dates**: TCGA datasets’ dates of release.

**Usage**

checkTCGA(what, cancerType, date = NULL)

**Arguments**

- **what**: One of DataSets or Dates.
- **cancerType**: A character of length 1 containing abbreviation (Cohort code - [http://gdac.broadinstitute.org/](http://gdac.broadinstitute.org/)) of types of cancers to check for.
- **date**: A NULL or character specifying from which date informations should be checked. By default (date = NULL) the newest available date is used. All available dates can be checked on [http://gdac.broadinstitute.org/](http://gdac.broadinstitute.org/) or by using checkTCGA('Dates') function. Required format ‘YYYY-MM-DD’.

**Details**

- If what='DataSets' enables to check TCGA datasets’ names for current release date and cohort.
- If what='Dates' enables to check dates of TCGA datasets’ releases.
checkTCGA

Value

- If `what='DataSets'` a data.frame of available datasets’ names (to pass to the `downloadTCGA` function) and sizes.
- If `what='Dates'` a vector of available dates to pass to the `downloadTCGA` function.

Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

Examples

```
# names for current release date and cohort
checkTCGA('DataSets', 'BRCA')
## Not run:
checkTCGA('DataSets', 'OV', tail(checkTCGA('Dates'))[3] )
#checkTCGA('DataSets', 'OV', checkTCGA('Dates')[5] ) # error
## End(Not run)

# dates of TCGA datasets' releases.
checkTCGA('Dates')
```

```
# Not run:
# TCGA datasets' names availability for
# current release date and cancer type.
releaseDate <- '2015-08-21'
cancerTypes <- c('OV', 'BRCA')
cancerTypes %>% sapply(function(element){
  grep(x = checkTCGA('DataSets', element, releaseDate)[, 1],
      pattern = 'humanmethylation450', value = TRUE) %>%
  as.vector()
})

## End(Not run)
```
**convertTCGA**

Convert data from RTCGA family to Bioconductor classes

---

**Description**

Functions use **Biobase** (http://bioconductor.org/packages/release/bioc/html/Biobase.html) package to transform data from packages from RTCGA data family to Bioconductor classes (**RTCGA.rnaseq**, **RTCGA.RPPA**, **RTCGA.PANCAN12**, **mRNA**, **RTCGA.methylation** to **ExpressionSet** and **RTCGA.CNV** to **GRanges**). For **RTCGA.PANCAN12** there is sense to convert expression.cb1, expression.cb2, cnv.cb.

**Usage**

```r
convertTCGA(dataSet, dataType = "expression")
convertPANCAN12(dataSet)
```

**Arguments**

- **dataSet** A data.frame to be converted to **ExpressionSet** or **GRanges**.
- **dataType** One of expression or CNV (for **RTCGA.CNV** datasets).

**Details**

This functionality is motivated by that we were asked to offer the data in Bioconductor-friendly classes because many users already have their data in one of the core infrastructure classes. Data of the same type in compatible containers promotes interoperability and makes it easy to combine and organize.

Bioconductor classes were designed to capitalize on the biological structure of the data. If data have a range-based component it’s natural, for Bioconductor users, to store and access these as a GRanges where they can extract position, strand etc. in the same way. Similarly for ExpressionSet. This class holds expression data along with experiment metadata and comes with built in accessors to extract and manipulate data. The idea is to offer a common API to the data; extracting the start position in a GRanges is always start(). With a data.frame it is different each time (unless select() is implemented) as the column names and organization of data can be different.

AnnotationHub and the soon to come ExperimentHub will host many different types of data. A primary goal moving forward is to offer similar data in a consistent format. For example, CNV data in AnnotationHub is offered as a GRanges and as more CNV are added we will ask that they too are packaged as GRanges. The aim is that streamlined data on the back-end will make for a more intuitive experience on the front-end.

**Value**

Functions return an **ExpressionSet** or a **GRanges** for **RTCGA.CNV**

**Biobase and GenomicRanges**

This function use tools from the fantastic **Biobase** (and **GenomicRanges** for CNV) package, so you’ll need to make sure to have it installed.
Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

Examples

```
########
# Expression data
########
library(RTCGA.rnaseq)
library(Biobase)
convertTCGA(BRCA.rnaseq) -> BRCA.rnaseq_ExpressionSet
## Not run:
library(RTCGA.PANCAN12)
convertPANCAN12(expression.cb1) -> PANCAN12_ExpressionSet
library(RTCGA.RPPA)
convertTCGA(BRCA.RPPA) -> BRCA.RPPA_ExpressionSet
library(RTCGA.methylation)
convertTCGA(BRCA.methylation) -> BRCA.methylation_ExpressionSet
library(RTCGA.mRNA)
convertTCGA(BRCA.mRNA) -> BRCA.mRNA_ExpressionSet
########
# CNV
########
library(RTCGA.CNV)
library(GRanges)
convertTCGA(BRCA.CNV, "CNV") -> BRCA.CNV_GRanges
```

## End(Not run)
Description

Snapshots of the clinical, mutations, CNVs, rnaseq, RPPA, mRNA, miRNASeq and methylation datasets from the 2015-11-01 release date (check all dates of release with checkTCGA('Dates')) are included in the RTCGA.data family (factory) that contains 9 packages:

- **RTCGA.rnaseq** rnaseq
- **RTCGA.clinical** clinical
- **RTCGA.mutations** mutations
- **RTCGA.CNV** CNV
- **RTCGA.RPPA** RPPA
- **RTCGA.mRNA** mRNA
- **RTCGA.miRNASeq** miRNASeq
- **RTCGA.methylation** methylation
- **RTCGA.PANCAN12** (not from TCGA)

Details

For more detailed information visit **RTCGA.data** website https://rtcga.github.io/RTCGA. One can install all data packages with **installTCGA**.

Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

## End(Not run)
```

downloadTCGA

Download TCGA data

**Description**

Enables to download TCGA data from specified dates of releases of concrete Cohorts of cancer types. Pass a name of required dataset to the `dataSet` parameter. By default the Merged Clinical dataSet is downloaded (value `dataSet = 'Merge_Clinical.Level_1'`) from the newest available date of the release.

**Usage**

```r
downloadTCGA(cancerTypes, dataSet = 'Merge_Clinical.Level_1', destDir,
             date = NULL, untarFile = TRUE, removeTar = TRUE, allDataSets = FALSE)
```

**Arguments**

- `cancerTypes`: A character vector containing abbreviations (Cohort code) of types of cancers to download from [http://gdac.broadinstitute.org/](http://gdac.broadinstitute.org/). For easy access from R check details below.
- `dataSet`: A part of the name of dataSet to be downloaded from [http://gdac.broadinstitute.org/runs/](http://gdac.broadinstitute.org/runs/). By default the Merged Clinical dataSet is downloaded (value `dataSet = 'Merge_Clinical.Level_1'`). Available datasets’ names can be checked using `checkTCGA` function.
downloadTCGA

destDir  A character specifying a directory into which dataSetS will be downloaded.
date  A NULL or character specifying from which date dataSetS should be down-
loaded. By default \( \text{date} = \text{NULL} \) the newest available date is used. All
available dates can be checked on \text{http://gdac.broadinstitute.org/runs/} or by us-
ing \text{checkTCGA} function. Required format 'YYYY-MM-DD'.
untarFile  Logical - should the downloaded file be untarred. Default is TRUE.
removeTar  Logical - should the downloaded .tar file be removed after untarring. Default
is TRUE.
allDataSets  Logical - should download all datasets matching dataSet parameter or only the
first one (without FFPE phrase if possible).

Details

All cohort names can be checked using: \( \text{sub( } x = \text{names( infoTCGA()) }, '\text{'-counts'}', '' \).

Value

No values. It only downloads files.

Issues

If you have any problems, issues or think that something is missing or is not clear please post an
issue on \text{https://github.com/RTCGA/RTCGA/issues}.

heatmapTCGA, infoTCGA, installTCGA, kmTCGA, mutationsTCGA, pcaTCGA, readTCGA, survivalTCGA,
theme_RTCGA

Examples

dir.create( 'hre' )

downloadTCGA( cancerTypes = 'ACC', dataSet = 'miR_gene_expression',
destDir = 'hre', date = tail( checkTCGA('Dates'), 2 )[1] )

## Not run:
downloadTCGA( cancerTypes = c('BRCA', 'OV'), destDir = 'hre',
date = tail( checkTCGA('Dates'), 2 )[1] )

## End(Not run)
Gather Expressions for TCGA Datasets

Description

Function gathers expressions over multiple TCGA datasets and extracts expressions for desired genes. See rnaseq, mRNA, RPPA, miRNASeq, methylation.

Usage

expressionsTCGA(..., extract.cols = NULL, extract.names = TRUE)

Arguments

... A data.frame or data.frames from TCGA study containing expressions informations.

extract.cols A character specifying the names of columns to be extracted with bcr_patient_barcode. If NULL (by default) all columns are returned.

extract.names Logical, whether to extract names of passed data.frames in ....

Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

Note

Input data.frames should contain column bcr_patient_barcode if extract.cols is specified.

  ggtitle("hsa-mir-101-1")

heatmapTCGA Create Heatmaps for TCGA Datasets

Description

Function creates heatmaps (geom_tile) for TCGA Datasets.

Usage

heatmapTCGA(data, x, y, fill, legend.title = "Expression", legend = "right",
  title = "Heatmap of expression", facet.names = NULL, tile.size = 0.1,
  tile.color = "white", ...) 

Arguments

data A data.frame from TCGA study containing variables to be plotted.
x, y A character name of variable containing groups.
fill A character names of fill variable.
legend.title A character with legend's title.
**heatmapTCGA**

**legend** A character specifying legend position. Allowed values are one of c("top", "bottom", "left", "right", "none"). Default is "top" side position. to remove the legend use legend = "none".

**title** A character with plot title.

**facet.names** A character of length maximum 2 containing names of variables to produce facets. See examples.

**tile.size, tile.color** A size and color passed to geom_tile.

**...** Further arguments passed to geom_tile.

**Issues**

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

**Note**

heatmapTCGA uses *scale_fill_viridis* from *viridis* package which is a port of the new matplotlib color maps (*viridis* - the default -, *magma*, *plasma* and *inferno*) to R. matplotlib [http://matplotlib.org/](http://matplotlib.org/) is a popular plotting library for python. These color maps are designed in such a way that they will analytically be perfectly perceptually-uniform, both in regular form and also when converted to black-and-white. They are also designed to be perceived by readers with the most common form of color blindness.

---

infoTCGA  

Information about cohorts from TCGA project

Description

Function restores codes and counts for each cohort from TCGA project.

Usage

infoTCGA()
installTCGA

Value
A list with a tabular information from http://gdac.broadinstitute.org/.

Issues
If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

Author(s)
Marcin Kosinski, <m.p.kosinski@gmail.com>

See Also
Other RTCGA: RTCGA-package, boxplotTCGA, checkTCGA, convertTCGA, datasetsTCGA, downloadTCGA, expressionsTCGA, heatmapTCGA, installTCGA, kmTCGA, mutationsTCGA, pcaTCGA, readTCGA, survivalTCGA, theme_RTCGA

Examples

infoTCGA()
library(magrittr)
(cohorts <- infoTCGA() %>%
  rownames() %>%
    sub('|-counts', '', x=.)
)

# in knitr chunk -> results='asis'
knitr::kable(infoTCGA())

installTCGA

Install packages from RTCGA family

Description
Function installs data packages from https://github.com/RTCGA/. Packages are listed datasetsTCGA.

Usage
installTCGA(packages = c("RTCGA.clinical", "RTCGA.mutations", "RTCGA.rnaseq", "RTCGA.RPPA", "RTCGA.mRNA", "RTCGA.CNV", "RTCGA.miRNASeq", "RTCGA.PANCAN12", "RTCGA.methylation"), build_vignettes = TRUE, ...)

Arguments
packages A character specifying the names of the data packages to be installed. By default installs all packages.
build_vignettes Should vignettes be build.
... Further arguments passed to install_github.
Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

Examples

```r
## Not run:
installTCGA()
installTCGA("RTCGA.clinical")
## End(Not run)
```

### kmTCGA

Plot Kaplan-Meier Estimates of Survival Curves for Survival Data

#### Description

Plots Kaplan-Meier estimates of survival curves for survival data.

#### Usage

```r
kmTCGA(x, times = "times", status = "patient.vital_status", 
explanatory.names = "1", main = "Survival Curves", risk.table = TRUE, 
risk.table.y.text = FALSE, conf.int = TRUE, return.survfit = FALSE, 
pval = FALSE, ...)```

#### Arguments

- `x` A data.frame containing survival information. See `survivalTCGA`.
- `times` The name of time variable.
- `status` The name of status variable.
- `explanatory.names` Names of explanatory variables to use in survival curves plot.
- `main` Title of the plot.
- `risk.table` Whether to show risk tables.
- `risk.table.y.text` Whether to show long strata names in legend of the risk table.
kmTCGA

conf.int Whether to show confidence intervals.
return.survfit Should return survfit object additionaly to survival plot?
pval Whether to add p-value of the log-rank test to the plot?
... Further arguments passed to ggsurvplot.

Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

Examples

```r
## Extracting Survival Data
library(RTCGA.clinical)
survivalTCGA(BRCA.clinical, OV.clinical, extract.cols = "admin.disease_code") -> BRCAOV.survInfo

# first munge data, then extract survival info
library(dplyr)
BRCA.clinical %>%
  filter(patient.drugs.drug.therapy_types.therapy_type %in%
         c("chemotherapy", "hormone therapy")) %>%
  rename(therapy = patient.drugs.drug.therapy_types.therapy_type) %>%
survivalTCGA(extract.cols = c("therapy")) -> BRCA.survInfo.chemo

# first extract survival info, then munge data
survivalTCGA(BRCA.clinical, extract.cols = c("patient.drugs.drug.therapy_types.therapy_type")) %>%
  filter(patient.drugs.drug.therapy_types.therapy_type %in%
         c("chemotherapy", "hormone therapy")) %>%
  rename(therapy = patient.drugs.drug.therapy_types.therapy_type) -> BRCA.survInfo.chemo

## Kaplan-Meier Survival Curves
kmTCGA(BRCAOV.survInfo, explanatory.names = "admin.disease_code", pval = TRUE)

kmTCGA(BRCAOV.survInfo, explanatory.names = "admin.disease_code", main = "", xlim = c(0,4000))

kmTCGA(BRCA.survInfo.chemo, explanatory.names = "therapy", xlim = c(0, 3000), conf.int = FALSE)
```
**mutationsTCGA**  
*Gather Mutations for TCGA Datasets*

**Description**

Function gathers mutations over multiple TCGA datasets and extracts mutations and further informations about them for desired genes. See `mutations`.

**Usage**

```r
mutationsTCGA(..., extract.cols = c("Hugo_Symbol", "Variant_Classification", "bcr_patient_barcode"), extract.names = TRUE, unique = TRUE)
```

**Arguments**

- `...` A data.frame or data.frames from TCGA study containing mutations information (RTCGA.mutations).
- `extract.cols` A character specifying the names of columns to be extracted with bcr_patient_barcode. If NULL all columns are returned.
- `extract.names` Logical, whether to extract names of passed data.frames in ....
- `unique` Should the outputed data be unique. By default it’s TRUE.

**Issues**

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

**Note**

Input data.frames should contain column bcr_patient_barcode if extract.cols is specified.

**Author(s)**

**Examples**

```r
library(RTCGA.mutations)
library(dplyr)
mutationsTCGA(BRCA.mutations, OV.mutations) %>%
filter(Hugo_Symbol == "TP53") %>%
filter(substr(bcr_patient_barcode, 14, 15) == "01") %>% # cancer tissue
mutate(bcr_patient_barcode = substr(bcr_patient_barcode, 1, 12)) -> BRCA_OV.mutations
```
library(RTCGA.clinical)
survivalTCGA(BRCA.clinical, OV.clinical, extract.cols = "admin.disease_code") %>%
rename(disease = admin.disease_code) -> BRCA_OV.clinical

BRCA_OV.clinical %>%
left_join(BRCA_OV.mutations, by = "bcr_patient_barcode") %>%
mutate(TP53 = ifelse(!is.na(Variant_Classification), "Mut", "WILDorNOINFO")) -> BRCA_OV.clinical_mutations

BRCA_OV.clinical_mutations %>%
select(times, patient.vital_status, disease, TP53) -> BRCA_OV.2plot
kmTCGA(BRCA_OV.2plot, explanatory.names = c("TP53", "disease"),
break.time.by = 400, xlim = c(0,2000))

---

**pcaTCGA**

*Plot Two Main Components of Principal Component Analysis*

**Description**

Plots Two Main Components of Principal Component Analysis

**Usage**

pcaTCGA(x, group.names, title = "", return.pca = FALSE, scale = TRUE,
center = TRUE, var.scale = 1, obs.scale = 1, ellipse = TRUE,
circle = TRUE, var.axes = FALSE, alpha = 0.8, add.lines = TRUE, ...)

**Arguments**

- `x`: A data.frame containing i.e. expressions information. See `expressionsTCGA`.
- `group.names`: Names of group variable to use in labels of the plot.
- `title`: The title of a plot.
- `return.pca`: Should return pca object additionaly to pca plot?
- `scale`: As in `prcomp`.
- `center`: As in `prcomp`.
- `var.scale`: As in `ggbiplot`.
- `obs.scale`: As in `ggbiplot`.
- `ellipse`: As in `ggbiplot`.
- `circle`: As in `ggbiplot`.
- `var.axes`: As in `ggbiplot`.
- `alpha`: As in `ggbiplot`.
- `add.lines`: Should axis lines be added to plot.
  
  Further arguments passed to `prcomp`.
Value

If `return.pca = TRUE` then a list containing a PCA plot (of class ggplot) and a pca model, the result of `prcomp` function. If not, then only PCA plot is returned.

ggbioplot

This function is based on https://github.com/vqv/ggbiplot which had to be copied to RTCGA because Bioconductor does not support remote dependencies from GitHub.

Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

Examples

```r
## Not run:
library(dplyr)
## RNASeq expressions
library(RTCGA.rnaseq)
expressionsTCGA(BRCA.rnaseq, OV.rnaseq, HNSC.rnaseq) %>%
  rename(cohort = dataset) %>%
  filter(substr(bcr_patient_barcode, 14, 15) == "01") -> BRCA.OV.HNSC.rnaseq.cancer

pcaTCGA(BRCA.OV.HNSC.rnaseq.cancer, "cohort")
pcaTCGA(BRCA.OV.HNSC.rnaseq.cancer, "cohort", add.lines = FALSE)
pcaTCGA(BRCA.OV.HNSC.rnaseq.cancer, "cohort", return.pca = TRUE) -> pca.rnaseq
pca.rnaseq$pplot
pca.rnaseq$pca

## End(Not run)
```

---

**readTCGA**

*Read TCGA data to the tidy format*
Description

`readTCGA` function allows to read unzipped files:

- clinical data - `Merge_Clinical.Level_1`
- `rnaseq` data (genes' expressions) - `rnaseqv2__illuminahiseq_rnaseqv2`
- genes' mutations data - `Mutation_Packager_Calls.Level`
- Reverse phase protein array data (RPPA) - `protein_normalization__data.Level_3`
- `Merge` transcriptome agilent data (mRNA) - `Merge_transcriptome__agilentg4502a_07_3__unc_edu__Level_3__unc_lowess_normalization_gene_level__data.Level_3`
- miRNASeq data - `Merge_mirnaseq__illuminahiseq_mirnaseq__bcgsc_ca__Level_3__miR_gene_expression__data.Level_3`
- methylation data - `Merge_methylation__humanmethylation27`
- isoforms data - `Merge_rnaseqv2__illuminahiseq_rnaseqv2__unc_edu__Level_3__RSEM_isoforms_normalized__data.Level_3`

from TCGA project. Those files can be easily downloaded with `downloadTCGA` function. See examples.

Usage

```r
readTCGA(path, dataType, ...)
```

Arguments

- `path` See details and examples.
- `dataType` One of ‘clinical’, ‘rnaseq’, ‘mutations’, ‘RPPA’, ‘mRNA’, ‘miRNASeq’, ‘methylation’, ‘isoforms’ depending on which type of data user is trying to read in the tidy format.
- `...` Further arguments passed to the `as.data.frame`

Details

All cohort names can be checked using: `sub( x = names( infoTCGA() ), '-counts', '' )`.

Parameter `path` specification:

- If `dataType = 'clinical'` a path to a `cancerType.clin.merged.txt` file.
- If `dataType = 'mutations'` a path to the unzipped folder `Mutation_Packager_Calls.Level` containing .maf files.
- If `dataType = 'rnaseq'` a path to the unzipped file `rnaseqv2__illuminahiseq_rnaseqv2__unc_edu__Level_3`.
- If `dataType = 'RPPA'` a path to the unzipped file in folder `protein_normalization__data.Level_3`
- If `dataType = 'mRNA'` a path to the unzipped file `cancerType.transcriptome__agilentg4502a_07_3__unc_edu`.
- If `dataType = 'miRNASeq'` a path to unzipped files `cancerType.mirnaseq__illuminahiseq_mirnaseq__bcgsc_ca__Level_3__miR_gene_expression__data.data.txt` or `cancerType.mirnaseq__illuminahiseq_mirnaseq__bcgsc_ca__Level_3__miR_gene_expression__data.data.txt`.
- If `dataType = 'methylation'` a path to unzipped files `cancerType.methylation__humanmethylation27__jhu_usc_edu__Level_3__within_bioassay_data_set_function__data.data.txt`.
- If `dataType = 'isoforms'` a path to unzipped files `cancerType.rnaseqv2__illuminahiseq_rnaseqv2__unc_edu__Level_3__RSEM_isoforms_normalized__data.data.txt`.
Value

An output:

- If `dataType = 'clinical'` a `data.frame` with clinical data.
- If `dataType = 'rnaseq'` a `data.frame` with rnaseq data.
- If `dataType = 'mutations'` a `data.frame` with mutations data.
- If `dataType = 'RPPA'` a `data.frame` with RPPA data.
- If `dataType = 'mRNA'` a `data.frame` with mRNA data.
- If `dataType = 'miRNASeq'` a `data.frame` with miRNASeq data.
- If `dataType = 'methylation'` a `data.frame` with methylation data.
- If `dataType = 'isoforms'` a `data.frame` with isoforms data.

Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.

**survivalTCGA**

**Extract Survival Information From RTCGA.clinical Datasets**

### Description

Extracts survival information from clinical datasets from TCGA project.
survivalTCGA

Usage

```r
survivalTCGA(..., extract.cols = NULL, extract.names = FALSE,
  barcode.name = "patient.bcr_patient_barcode",
  event.name = "patient.vital_status",
  days.to.followup.name = "patient.days_to_last_followup",
  days.to.death.name = "patient.days_to_death")
```

Arguments

... A data.frame or data.frames from TCGA study containing clinical informations. See `clinical`.

`extract.cols` A character specifing the names of extra columns to be extracted with survival information.

`extract.names` Logical, whether to extract names of passed data.frames in ...

`barcode.name` A character with the name of `bcr_patient_barcode` which differs between TCGA releases. By default is the name from the newest release date `tail(checkTCGA('Dates'),1)`.

`event.name` A character with the name of `patient.vital_status` which differs between TCGA releases. By default is the name from the newest release date `tail(checkTCGA('Dates'),1)`.

`days.to.followup.name` A character with the name of `patient.days_to_last_followup` which differs between TCGA releases. By default is the name from the newest release date `tail(checkTCGA('Dates'),1)`.

`days.to.death.name` A character with the name of `patient.days_to_death` which differs between TCGA releases. By default is the name from the newest release date `tail(checkTCGA('Dates'),1)`.

Value

A data.frame containing information about times and censoring for specific `bcr_patient_barcode`. The name passed in `barcode.name` is changed to `bcr_patient_barcode`.

Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on [https://github.com/RTCGA/RTCGA/issues](https://github.com/RTCGA/RTCGA/issues).

Note

Input data.frames should contain columns `patient.bcr_patient_barcode, patient.vital_status, patient.days_to_last_followup, patient.days_to_death` or their previous equivalents. It is recommended to use datasets from `clinical`.

### Examples

```r
## Extracting Survival Data
library(RTCGA.clinical)
survivalTCGA(BRCA.clinical, OV.clinical, extract.cols = "admin.disease_code") -> BRCAOV.survInfo

# first munge data, then extract survival info
library(dplyr)
BRCA.clinical %>%
  filter(patient.drugs.drug.therapy_types.therapy_type %in% c("chemotherapy", "hormone therapy")) %>%
  rename(therapy = patient.drugs.drug.therapy_types.therapy_type) %>%
survivalTCGA(extract.cols = c("therapy")) -> BRCA.survInfo.chemo

# first extract survival info, then munge data
survivalTCGA(BRCA.clinical,
  extract.cols = c("patient.drugs.drug.therapy_types.therapy_type")) %>%
  filter(patient.drugs.drug.therapy_types.therapy_type %in% c("chemotherapy", "hormone therapy")) %>%
  rename(therapy = patient.drugs.drug.therapy_types.therapy_type) -> BRCA.survInfo.chemo

## Kaplan-Meier Survival Curves
kmTCGA(BRCAOV.survInfo, explanatory.names = "admin.disease_code", pval = TRUE)

kmTCGA(BRCAOV.survInfo, explanatory.names = "admin.disease_code", main = "",
  xlim = c(0, 4000))

kmTCGA(BRCA.survInfo.chemo, explanatory.names = "therapy", xlim = c(0, 3000), conf.int = FALSE)
```

---

**theme_RTCGA**

**RTCXA Theme For ggplot2**

### Description

Additional **RTCXA** theme for `ggtheme`, based on `theme_pander`.

### Usage

```r
theme_RTCGA(base_size = 11, base_family = "", ...)
```

### Arguments

- `base_size`: base font size
- `base_family`: base font family
- `...`: Further arguments passed to `theme_pander`.
Issues

If you have any problems, issues or think that something is missing or is not clear please post an issue on https://github.com/RTCGA/RTCGA/issues.
