Package ‘RTCGAToolbox’

April 26, 2017

Type Package
Title A new tool for exporting TCGA Firehose data
Version 2.6.0
Date 2015-05-28
Author Mehmet Kemal Samur
Maintainer Mehmet Kemal Samur <samur@jimmy.harvard.edu>
Description Managing data from large scale projects such as The Cancer Genome Atlas (TCGA) for further analysis is an important and time consuming step for research projects. Several efforts, such as Firehose project, make TCGA pre-processed data publicly available via web services and data portals but it requires managing, downloading and preparing the data for following steps. We developed an open source and extensible R based data client for Firehose pre-processed data and demonstrated its use with sample case studies. Results showed that RTCGAToolbox could improve data management for researchers who are interested with TCGA data. In addition, it can be integrated with other analysis pipelines for following data analysis.

CorResult-class

An S4 class to store correlations between gene expression level and copy number data

Description

An S4 class to store correlations between gene expression level and copy number data

Slots

Dataset  A cohort name
Correlations  Results data frame

DGEResult-class

An S4 class to store differential gene expression results

Description

An S4 class to store differential gene expression results

Slots

Dataset  Dataset name
Toptable  Results data frame
FirehoseCGHArray-class  

An S4 class to store data from CGA platforms

Description

An S4 class to store data from CGA platforms

Slots

Filename  Platform name
DataMatrix  A data frame that stores the CGH data.

FirehoseData-class  An S4 class to store main data object from client function.

Description

An S4 class to store main data object from client function.

Slots

Dataset  A cohort name
Clinical  Clinical data frame
RNASeqGene  Gene level expression data matrix from RNAseq
RNASeq2GeneNorm  Gene level expression data matrix from RNAseq (RSEM)
mRNASeqGene  mRNA expression data from matrix smallRNAseq
CNASNP  A data frame to store somatic copy number alterations from SNP array platform
CNVSNP  A data frame to store germline copy number variants from SNP array platform
CNAsnp  A data frame to store somatic copy number alterations from sequencing platform
CNACGH  A list that stores FirehoseCGHArray object for somatic copy number alterations from CGH platform
Methylation  A list that stores FirehoseMethylationArray object for methylation data
mRNAArray  A list that stores FirehoseRNAArray object for gene expression data from microarray
miRNAArray  A list that stores FirehoseRNAArray object for miRNA expression data from microarray
RPAAArray  A list that stores FirehoseRNAArray object for RPPA data
Mutations  A data frame for mutation information from sequencing data
GISTIC  A FirehoseGISTIC object to store processed copy number data
BarcodeUUID  A data frame that stores the Barcodes, UUIDs and Short sample identifiers
FirehoseGISTIC-class
An S4 class to store processed copy number data. (Data processed by using GISTIC2 algorithm)

Description
An S4 class to store processed copy number data. (Data processed by using GISTIC2 algorithm)

Slots
- Dataset  Cohort name
- AllByGene  A data frame that stores continuous copy number
- ThresholedByGene  A data frame for discrete copy number data

FirehoseMethylationArray-class
An S4 class to store data from methylation platforms

Description
An S4 class to store data from methylation platforms

Slots
- Filename  Platform name
- DataMatrix  A data frame that stores the methylation data.

FirehoseRNAArray-class
An S4 class to store data from array (mRNA, miRNA etc.) platforms

Description
An S4 class to store data from array (mRNA, miRNA etc.) platforms

Slots
- Filename  Platform name
- DataMatrix  A data matrix that stores the expression data.
getCNGECorrelation

Perform correlation analysis between gene expression and copy number data

Description

ggetCNGECorrelation returns a list that stores the results correlation between gene expression and copy number data.

Usage

ggetCNGECorrelation(dataObject, adj.method = "BH", adj.pval = 0.05, raw.pval = 0.05)

Arguments

dataObject  This must be FirehoseData object.
adj.method  Raw p value adjustment methods (Default "BH")
adj.pval  Adjusted p value cut off for results table (Default 0.05)
raw.pval  raw p value cut off for results table (Default 0.05)

Value

Returns a list that stores results for each dataset

Examples

data(RTCGASample)
corRes = getCNGECorrelation(RTCGASample)
corRes
showResults(corRes[[1]])
## Not run:

data
Export data from FirehoseData object

Description

Export data from FirehoseData object

Usage

ggetData(object, type = "", platform = NULL, CN = "All")
getData,FirehoseData-method

Arguments

object  
A FirehoseData object

type  
A data type to be exported (Data types can be seen by typing show(objectname))

platform  
A list id for data types that may come from multiple platform (such as mRNAArray)

CN  
A copy number data type (Default: 'All') (Possible values 'All' or 'Thresholed')

Value

Returns matrix or data frame depends on data type

Examples

data(RTCGASample)
sampleClinical = getData(RTCGASample,"Clinical")
sampleClinical = getData(RTCGASample,"RNASeqGene")
getDiffExpressedGenes

Perform differential gene expression analysis for mRNA expression data.

Description

getDiffExpressedGenes returns a list that stores the results for each dataset.

Usage

gdiffExpressedGenes(dataObject, DrawPlots = TRUE, adj.method = "BH",
adj.pval = 0.05, raw.pval = 0.05, logFC = 2, hmTopUpN = 100,
hmTopDownN = 100, meanFilter = 10)

Arguments

dataObject: This must be FirehoseData object.
DrawPlots: A logical parameter to draw heatmaps and volcano plots.
adj.method: Raw p value adjustment methods (Default: "BH")
adj.pval: Adjusted p value cut off for results table (Default 0.05)
raw.pval: raw p value cut off for results table (Default 0.05)
logFC: log fold change cut off for results table (Default 2)
hmTopUpN: Max number of up regulated genes in heatmap (Default 100)
hmTopDownN: Max number of down regulated genes in heatmap (Default 100)
meanFilter: Mean read counts for each gene to filter not expressed genes (Default 10)

Value

Returns a list that stores results for each dataset

Examples

data(RTCGASample)
dgegenes = getDiffExpressedGenes(RTCGASample)
dgegenes
showResults(dgegenes[[1]])
dgegenes = showResults(dgegenes[[1]])
head(dgegenes)
## Not run:
getFirehoseAnalyzeDates

*Get data analyze dates.*

**Description**

getFirehoseAnalyzeDates returns the character vector for analyze release dates.

**Usage**

```r
getFirehoseAnalyzeDates(last = NULL)
```

**Arguments**

- `last` To list last n dates. (Default NULL)

**Value**

A character vector for dates.

**Examples**

```r
getFirehoseAnalyzeDates()
getFirehoseAnalyzeDates(last=2)
```

---

getFirehoseData

*Get data from Firehose portal.*

**Description**

getFirehoseData returns FirehoseData object that stores TCGA data.

**Usage**

```r
getFirehoseData(dataset, runDate = NULL, gistic2_Date = NULL, 
RNAseq_Gene = FALSE, Clinic = TRUE, miRNAseq_Gene = FALSE, 
RNAseq2_Gene_Norm = FALSE, CNA_SNP = FALSE, CNV_SNP = FALSE, 
CNA_Seq = FALSE, CNA_CGH = FALSE, Methylation = FALSE, 
Mutation = FALSE, mRNA_Array = FALSE, miRNA_Array = FALSE, 
RPPA = FALSE, RNAseqNorm = "raw_counts", 
RNAseq2Norm = "normalized_count", forceDownload = FALSE, destdir = ".", 
fileSizeLimit = 500, getUUIDs = FALSE)
```
Arguments

dataset
runDate
gistic2_Date
RNAseq_Gene
Clinic
miRNASeq_Gene
RNaseq2_Gene_Norm
CNA_SNP
CNV_SNP
CNA_Seq
CNA_CGH
Methylation
Mutation
mRNA_Array
miRNA_Array
RPPA
RNaseqNorm
RNaseq2Norm
forceDownload
destdir
fileSizeLimit
getUUIDs

Details

This is a main client function to download data from Firehose TCGA portal.

Value

A FirehoseData data object that stores data for selected data types.
getFirehoseRunningDates

Description
getFirehoseRunningDates returns the character vector for standard data release dates.

Usage
getFirehoseRunningDates(last = NULL)

Arguments
last To list last n dates. (Default NULL)

Value
A character vector for dates.

getFirehoseDatasets

Get list of TCGA cohorts.

Description
getFirehoseDatasets returns a character array for cohorts.

Usage
getFirehoseDatasets()

Value
A character string

Examples
getFirehoseDatasets()
getMutationRate

Examples

getFirehoseRunningDates()
getFirehoseRunningDates(last=2)

getMutationRate  
Make a table for mutation rate of each gene in the cohort

Description

Make a table for mutation rate of each gene in the cohort

Usage

getMutationRate(dataObject)

Arguments

dataObject  
This must be FirehoseData object.

Value

Returns a data table

Examples

data(RTCGASample)
mutRate = getMutationRate(dataObject=RTCGASample)
mutRate <- mutRate[order(mutRate[,2], decreasing = TRUE),]
head(mutRate)
## Not run:

getReport

Draws a circle plot into working directory

Description

getReport draws a circle plot into your working directory to show log fold changes for differentially expressed genes, copy number alterations and mutations.

Usage

getReport(dataObject, DGEResult1 = NULL, DGEResult2 = NULL, geneLocations)

Arguments

dataObject  
This must be FirehoseData object.
DGEResult1  
Differential gene expression results object (Optional)
DGEResult2  
Differential gene expression results object (Optional)
geneLocations  
Gene coordinates.
getSurvival

Perform survival analysis based on gene expression data

Description

getSurvival draws a KM plot and show survival analysis results between groups that are defined by gene expression data

Usage

getSurvival(dataObject, numberOfGroups = 2, geneSymbols, sampleTimeCensor)

Arguments

dataObject This must be FirehoseData object.

numberOfGroups Can be set as 2 or 3. (Default 2) Order and divide samples into n groups by using gene expression data.

geneSymbols Gene symbol that is going to be tested

sampleTimeCensor a data frame that stores clinical data. First column should store sample IDs, second column should have time and third column should have event information. For more information please see vignette.

Value

Draws a KM plot
Examples

```r
## get data with getFirehoseData() function and call survival analysis
## Always check clinical data file for structural changes
data(RTCGASample)
clinicData <- getData(RTCGASample,"Clinical")
clinicData = clinicData[,3:5]
clinicData[is.na(clinicData[,3]),3] = clinicData[is.na(clinicData[,3]),2]
survData <- data.frame(Samples=rownames(clinicData),Time=as.numeric(clinicData[,3]),
Censor=as.numeric(clinicData[,1]))
getSurvival(dataObject=RTCGASample,geneSymbols=c(“FCGBP”),sampleTimeCensor=survData)
```

**hg19.ucsc.gene.locations**

*Gene coordinates for circle plot.*

**Description**

A dataset containing the gene coordinates. The variables are as follows:

**Format**

A data frame with 28454 rows and 5 variables

**Details**

- GeneSymbol. Gene symbols
- Chromosome. Chromosome name
- Strand. Gene strand on chromosome
- Start. Gene location on chromosome
- End. Gene location on chromosome

**RTCGASample**

*A sample data object for sample codes.*

**Description**

A FirehoseData object for running sample codes. The variables are as follows:

**Format**

A FirehoseData data object

**Details**

- a2. A sample data object
RTCGAToolbox: A New Tool for Exporting TCGA Firehose Data

Description
Managing data from large-scale projects (such as The Cancer Genome Atlas (TCGA) for further analysis) is an important and time-consuming step for research projects. Several efforts, such as the Firehose project, make TCGA pre-processed data publicly available via web services and data portals, but this information must be managed, downloaded, and prepared for subsequent steps. We have developed an open-source and extensible R-based data client for pre-processed data from the Firehose, and demonstrate its use with sample case studies. Results show that our RTCGAToolbox can facilitate data management for researchers interested in working with TCGA data. The RTCGAToolbox can also be integrated with other analysis pipelines for further data processing.

Details
The main function you’re likely to need from RTCGAToolbox is `getFirehoseData`. Otherwise refer to the vignettes to see how to use the RTCGAToolbox.

Author(s)

showResults

Export toptable or correlation data frame

Description
Export toptable or correlation data frame

Usage
`showResults(object)`

Arguments

| object | A `DGEResult` or `CorResult` object |

Value
Returns toptable or correlation data frame

Examples
```r
data(RTCGASample)
dgeRes = getDiffExpressedGenes(RTCGASample)
dgeRes
showResults(dgeRes[[1]])
```
showResults,CorResult-method

Export toptable or correlation data frame

Description

Export toptable or correlation data frame

Usage

## S4 method for signature 'CorResult'
showResults(object)

Arguments

object

A DGEResult or CorResult object

Value

Returns correlation results data frame

Examples

data(RTCGASample)
corRes = getCNGECorrelation(RTCGASample,adj.pval = 1,raw.pval = 1)
corRes
showResults(corRes[[1]])

---

showResults,DGEResult-method

Export toptable or correlation data frame

Description

Export toptable or correlation data frame

Usage

## S4 method for signature 'DGEResult'
showResults(object)

Arguments

object

A DGEResult or CorResult object

Value

Returns toptable for DGE results
Examples

data(RTCGASample)
dgeRes = getDiffExpressedGenes(RTCGASample)
dgeRes
showResults(dgeRes[[1]])
