Package ‘RTCGAToolbox’

April 15, 2017

Type Package
Title A new tool for exporting TCGA Firehose data
Version 2.4.0
Date 2015-05-28
Author Mehmet Kemal Samur
Maintainer Mehmet Kemal Samur <samur@jimmy.harvard.edu>
Description Managing data from large scale projects such as The Cancer Genome Atlas (TCGA) for further analysis is an important and time consuming step for research projects. Several efforts, such as Firehose project, make TCGA pre-processed data publicly available via web services and data portals but it requires managing, downloading and preparing the data for following steps. We developed an open source and extensible R based data client for Firehose pre-processed data and demonstrated its use with sample case studies. Results showed that RTCGAToolbox could improve data management for researchers who are interested with TCGA data. In addition, it can be integrated with other analysis pipelines for following data analysis.

R topics documented:

  CorResult-class .................................................. 2
  DGEResult-class .................................................. 2
  FirehoseCGHArray-class ......................................... 3
  FirehoseData-class ............................................... 3
  FirehoseGISTIC-class ............................................. 4
  FirehoseMethylationArray-class ............................... 4
  FirehosemRNAArray-class ....................................... 4
  getCNGECorrelation ............................................. 5
CorResult-class

An S4 class to store correlations between gene expression level and copy number data

Description

An S4 class to store correlations between gene expression level and copy number data

Slots

Dataset A cohort name
Correlations Results data frame

DGEResult-class

An S4 class to store differential gene expression results

Description

An S4 class to store differential gene expression results

Slots

Dataset Dataset name
Toptable Results data frame
FirehoseCGHArray-class

An S4 class to store data from CGA platforms

Description

An S4 class to store data from CGA platforms

Slots

Filename Platform name
DataMatrix A data frame that stores the CGH data.

FirehoseData-class

An S4 class to store main data object from client function.

Description

An S4 class to store main data object from client function.

Slots

Dataset A cohort name
Clinical Clinical data frame
RNASeqGene Gene level expression data matrix from RNAseq
RNASeq2GeneNorm Gene level expression data matrix from RNAseq (RSEM)
miRNASeqGene miRNA expression data from matrix smallRNAseq
CNASNP A data frame to store somatic copy number alterations from SNP array platform
CNVSNP A data frame to store germline copy number variants from SNP array platform
CNAsnp A data frame to store somatic copy number alterations from sequencing platform
CNACGH A list that stores FirehoseCGHArray object for somatic copy number alterations from CGH platform
Methylation A list that stores FirehoseMethylationArray object for methylation data
mRNAArray A list that stores FirehoseRNAArray object for gene expression data from microarray
miRNAArray A list that stores FirehoseRNAArray object for miRNA expression data from microarray
RPPAArray A list that stores FirehoseRNAArray object for RPPA data
Mutations A data frame for mutation information from sequencing data
GISTIC A FirehoseGISTIC object to store processed copy number data
BarcodeUUID A data frame that stores the Barcodes, UUIDs and Short sample identifiers
FirehoseGISTIC-class

An S4 class to store processed copy number data. (Data processed by using GISTIC2 algorithm)

Description

An S4 class to store processed copy number data. (Data processed by using GISTIC2 algorithm)

Slots

Dataset Cohort name
AllByGene A data frame that stores continuous copy number
ThresholdedByGene A data frame for discrete copy number data

FirehoseMethylationArray-class

An S4 class to store data from methylation platforms

Description

An S4 class to store data from methylation platforms

Slots

Filename Platform name
DataMatrix A data frame that stores the methylation data.

FirehoseRNAArray-class

An S4 class to store data from array (mRNA, miRNA etc.) platforms

Description

An S4 class to store data from array (mRNA, miRNA etc.) platforms

Slots

Filename Platform name
DataMatrix A data matrix that stores the expression data.
getCNGECorrelation

Perform correlation analysis between gene expression and copy number data

Description

getCNGECorrelation returns a list that stores the results correlation between gene expression and copy number data.

Usage

getCNGECorrelation(dataObject, adj.method = "BH", adj.pval = 0.05, raw.pval = 0.05)

Arguments

dataObject This must be FirehoseData object.
adj.method Raw p value adjustment methods (Default "BH")
adj.pval Adjusted p value cut off for results table (Default 0.05)
raw.pval raw p value cut off for results table (Default 0.05)

Value

Returns a list that stores results for each dataset

Examples

data(RTCGASample)
corRes = getCNGECorrelation(RTCGASample)
corRes
showResults(corRes[[1]])
## Not run:

data
Export data from FirehoseData object

Description

Export data from FirehoseData object

Usage

getData(object, type = "", platform = NULL, CN = "All")
getData,FirehoseData-method

Arguments

object A FirehoseData object

type A data type to be exported (Data types can be seen by typing show(objectname))

platform A list id for data types that may come from multiple platform (such as mRNAArray)

CN A copy number data type (Default: 'All') (Possible values 'All' or 'Thresholed')

Value

Returns matrix or data frame depends on data type

Examples

data(RTCGASample)
sampleClinical = getData(RTCGASample,"Clinical")
sampleClinical = getData(RTCGASample,"RNASeqGene")
getDiffExpressedGenes

Perform differential gene expression analysis for mRNA expression data.

Description

getDiffExpressedGenes returns a list that stores the results for each dataset.

Usage

getDiffExpressedGenes(dataObject, DrawPlots = TRUE, adj.method = "BH", adj.pval = 0.05, raw.pval = 0.05, logFC = 2, hmTopUpN = 100, hmTopDownN = 100, meanFilter = 10)

Arguments

dataObject This must be FirehoseData object.
DrawPlots A logical parameter to draw heatmaps and volcano plots.
adj.method Raw p value adjustment methods (Default "BH")
adj.pval Adjusted p value cut off for results table (Default 0.05)
raw.pval raw p value cut off for results table (Default 0.05)
logFC log fold change cut off for results table (Default 2)
hmTopUpN Max number of up regulated genes in heatmap (Default 100)
hmTopDownN Max number of down regulated genes in heatmap (Default 100)
meanFilter Mean read counts for each gene to filter not expressed genes (Default 10)

Value

Returns a list that stores results for each dataset

Examples

data(RTCGASample)
dgegenes = getDiffExpressedGenes(RTCGASample)
dgegenes
showResults(dgegenes[[1]])
dgegenes = showResults(dgegenes[[1]])
head(dgegenes)
## Not run:
getFirehoseAnalyzeDates

Get data analyze dates.

Description

getFirehoseAnalyzeDates returns the character vector for analyze release dates.

Usage

getFirehoseAnalyzeDates(last = NULL)

Arguments

last
To list last n dates. (Default NULL)

Value

A character vector for dates.

Examples

getFirehoseAnalyzeDates()
getFirehoseAnalyzeDates(last=2)

getFirehoseData

Get data from Firehose portal.

Description

getFirehoseData returns FirehoseData object that stores TCGA data.

Usage

getFirehoseData(dataset, runDate = NULL, gistic2_Date = NULL, RNAseq_Gene = FALSE, Clinic = TRUE, miRNAseq_Gene = FALSE, RNAseq2_Gene_Norm = FALSE, CNA_SNP = FALSE, CNV_SNP = FALSE, CNA_Seq = FALSE, CNA_CGH = FALSE, Methylation = FALSE, Mutation = FALSE, mRNA_Array = FALSE, miRNA_Array = FALSE, RPPA = FALSE, RNAseqNorm = "raw_counts", RNAseq2Norm = "normalized_count", forceDownload = FALSE, destdir = ".", fileSizeLimit = 500, getUUIDs = FALSE)
getFirehoseData

Arguments

dataset A cohort name. All dataset names can be accessible via getFirehoseDatasets
runDate Standard data run dates. Date list can be accessible via getFirehoseRunningDates
gistic2_Date Analyze running dates for GISTIC processed copy number data. Date list can be accessible via getFirehoseAnalyzeDates
RNAseq_Gene Logical (default FALSE) parameter for RNAseq data.
Clinic Logical (default TRUE) parameter for clinical data.
mRNASeq_Gene Logical (default FALSE) parameter for smallRNAseq data.
RNAseq2_Gene_Norm Logical (default FALSE) parameter for RNAseq v2 (RSEM processed) data.
CNA_SNP Logical (default FALSE) parameter for somatic copy number alterations data from SNP array.
CNV_SNP Logical (default FALSE) parameter for germline copy number variants data from SNP array.
CNA_Seq Logical (default FALSE) parameter for somatic copy number alterations data from sequencing.
CNA_CGH Logical (default FALSE) parameter for somatic copy number alterations data from CGH.
Methylation Logical (default FALSE) parameter for methylation data.
Mutation Logical (default FALSE) parameter for mutation data from sequencing.
mRNA_Array Logical (default FALSE) parameter for mRNA expression data from microarray.
mRNA_Array Logical (default FALSE) parameter for miRNA expression data from microarray.
RPPA Logical (default FALSE) parameter for RPPA data
RNAseqNorm RNAseq data normalization method. (Default raw_counts)
RNAseq2Norm RNAseq v2 data normalization method. (Default normalized_count)
forceDownload A logic (Default FALSE) key to force download RTCGAToolbox every time. By default if you download files into your working directory once than RTCGAToolbox using local files next time.
destdir Directory in which to store the resulting downloaded file. Defaults to current working directory.
fileSizeLimit Files that are larger than set value (megabyte) won’t be downloaded (Default: 500)
getUUIDs Logical key to get UUIDs from barcode (Default: FALSE)

Details

This is a main client function to download data from Firehose TCGA portal.

Value

A FirehoseData data object that stores data for selected data types.
Examples

```r
#Sample Dataset
data(RTCGASample)
RTCGASample
## Not run:
BRCAdata <- getFirehoseData(dataset="BRCA",
runDate="20140416", gistic2_Date="20140115",
RNAseq_Gene=TRUE, Clinic=TRUE, mRNA_Array=TRUE, Mutation=TRUE)
## End(Not run)
```

getFirehoseDatasets  
Get list of TCGA cohorts.

Description

getFirehoseDatasets returns a character array for cohorts.

Usage

getFirehoseDatasets()

Value

A character string

Examples

getFirehoseDatasets()

getFirehoseRunningDates

Get standard data running dates.

Description

getFirehoseRunningDates returns the character vector for standard data release dates.

Usage

getFirehoseRunningDates(last = NULL)

Arguments

- `last` To list n dates. (Default NULL)

Value

A character vector for dates.
**getMutationRate**

Examples

getFirehoseRunningDates()
getFirehoseRunningDates(last=2)

---

Make a table for mutation rate of each gene in the cohort

**Description**

Make a table for mutation rate of each gene in the cohort

**Usage**

getMutationRate(dataObject)

**Arguments**

dataObject This must be FirehoseData object.

**Value**

Returns a data table

**Examples**

data(RTCGASample)
mutRate = getMutationRate(dataObject=RTCGASample)
mutRate <- mutRate[order(mutRate[,2],decreasing = TRUE),]
head(mutRate)
## Not run:

---

**getReport**

**Description**

Draws a circle plot into working directory

getReport draws a circle plot into your working directory to show log fold changes for differentially expressed genes, copy number alterations and mutations.

**Usage**

getReport(dataObject, DGEResult1 = NULL, DGEResult2 = NULL, geneLocations)

**Arguments**

dataObject This must be FirehoseData object.
DGEResult1 Differential gene expression results object (Optional)
DGEResult2 Differential gene expression results object (Optional)
geneLocations Gene coordinates.
getValue

Draws a circle plot

Examples

data(RTCGASample)
require("Homo.sapiens")
locations = genes(Homo.sapiens, columns="SYMBOL")
locations = as.data.frame(locations)
locations <- locations[,c(6,1,5,2:3)]
locations <- locations[!is.na(locations[,1]),]
rownames(locations) <- locations[,1]
t1=getDiffExpressedGenes(RTCGASample)
## Not run:
getReport(dataObject=RTCGASample,DGEResult1=t1[[1]],geneLocations=locations)
## End(Not run)

getSurvival

Perform survival analysis based on gene expression data

Description

getSurvival draws a KM plot and show survival analysis results between groups that are defined by gene expression data

Usage

getSurvival(dataObject, numberofGroups = 2, geneSymbols, sampleTimeCensor)

Arguments

dataObject This must be FirehoseData object.

numberofGroups Can be set as 2 or 3. (Default 2) Order and divide samples into n groups by using gene expression data.

geneSymbols Gene symbol that is going to be tested

sampleTimeCensor a data frame that stores clinical data. First column should store sample IDs, second column should have time and third column should have event information. For more information please see vignette.

Value

Draws a KM plot
Examples

```r
# get data with getFirehoseData() function and call survival analysis
# Always check clinical data file for structural changes
data(RTCGASample)
clinicData <- getData(RTCGASample, "Clinical")
clinicData = clinicData[,3:5]
clinicData[is.na(clinicData[,3]),3] = clinicData[is.na(clinicData[,3]),2]
survData <- data.frame(Samples=rownames(clinicData),Time=as.numeric(clinicData[,3]),
                      Censor=as.numeric(clinicData[,1]))
getSurvival(dataObject=RTCGASample,geneSymbols=c("FCGBP"),sampleTimeCensor=survData)
```

---

### hg19.ucsc.gene.locations

**Gene coordinates for circle plot.**

**Description**

A dataset containing the gene coordinates. The variables are as follows:

**Format**

A data frame with 28454 rows and 5 variables

**Details**

- **GeneSymbol.** Gene symbols
- **Chromosome.** Chromosome name
- **Strand.** Gene strand on chromosome
- **Start.** Gene location on chromosome
- **End.** Gene location on chromosome

---

### RTCGASample

**A sample data object for sample codes.**

**Description**

A FirehoseData object for running sample codes. The variables are as follows:

**Format**

A FirehoseData data object

**Details**

- **a2.** A sample data object
RTCGAToolbox: A New Tool for Exporting TCGA Firehose Data

Description
Managing data from large-scale projects (such as The Cancer Genome Atlas (TCGA)) for further analysis is an important and time consuming step for research projects. Several efforts, such as the Firehose project, make TCGA pre-processed data publicly available via web services and data portals, but this information must be managed, downloaded and prepared for subsequent steps. We have developed an open source and extensible R based data client for pre-processed data from the Firehose, and demonstrate its use with sample case studies. Results show that our RTCGAToolbox can facilitate data management for researchers interested in working with TCGA data. The RTCGAToolbox can also be integrated with other analysis pipelines for further data processing.

Details
The main function you’re likely to need from RTCGAToolbox is getFirehoseData. Otherwise refer to the vignettes to see how to use the RTCGAToolbox.

Author(s)
Mehmet Kemal Samur

showResults
Export toptable or correlation data frame

Description
Export toptable or correlation data frame

Usage
showResults(object)

Arguments
object A DGEResult or CorResult object

Value
Returns toptable or correlation data frame

Examples
data(RTCGASample)
dgeRes = getDiffExpressedGenes(RTCGASample)
dgeRes
showResults(dgeRes[[1]])
## `showResults`, `CorResult-method`

Export toptable or correlation data frame

### Description

Export toptable or correlation data frame

### Usage

```r
## S4 method for signature 'CorResult'
showResults(object)
```

### Arguments

- **object**
  
  A `DGEResult` or `CorResult` object

### Value

Returns correlation results data frame

### Examples

```r
data(RTCGASample)
corRes = getCNGECorrelation(RTCGASample, adj.pval = 1, raw.pval = 1)
corRes
showResults(corRes[[1]])
```

---

## `showResults`, `DGEResult-method`

Export toptable or correlation data frame

### Description

Export toptable or correlation data frame

### Usage

```r
## S4 method for signature 'DGEResult'
showResults(object)
```

### Arguments

- **object**
  
  A `DGEResult` or `CorResult` object

### Value

Returns toptable for DGE results
Examples

data(RTCGASample)
dgeRes = getDiffExpressedGenes(RTCGASample)
dgeRes
showResults(dgeRes[[1]])
