`[[` Returns the given table column. This also supports recursive subsetting to address columns, then cells, then sub-cells (if applicable). See `Extract` for more information.

\$ Returns the given table column.

**saveHTML** (aafTable, filename, title = "Bioconductor Affymetrix Probe Listing", colnames = colnames(aafTable), range = 1:dim(aafTable)[1], open = FALSE, widget = FALSE): Saves the table to HTML with the specified filename and title. Both the columns and the range of table rows can be specified. Range can either be specified as a character vector of probe ids or an integer vector of row positions. One can also specify whether to open the resulting file in the browser and whether to use a widget for column selection.

**saveText** (aafTable, filename, header = TRUE, colnames = colnames(aafTable), range = 1:dim(aafTable)[1], widget = FALSE): Saves the table to tab delimited text with specified filename and optional header. Both the columns and the range of table rows can be specified. Range can either be specified as a character vector of probe ids or an integer vector of row positions. One can also specify whether to use a widget for column selection.

Constructs an aafTable object containing expression values given an ExpressionSet.
In the resulting HTML table, the expression values will have backgrounds with varying intensities
of green depending on the expression measure.

Usage

Arguments

- probeids: character vector containing probe ids
- chip: name of the chip data package
Value

**aafUniGene-class**  
*Class aafUniGene, a class for UniGene cluster ids*

Description

An abstraction for UniGene cluster ids from Bioconductor data packages.

Objects from the Class

Objects are generally created by the **aafUniGene** constructor. Objects can also be created manually by calls of the form `new("aafUniGene", id)`.

Slots

- `.Data`: Object of class character

Extends

Class character, from data part.

Methods

- **getURL** (aafUniGene): Returns a URLs to the corresponding entry in NCBI’s UniGene database. On the rare chance that more than one id is defined, more than one URL will be returned.
- **getHTML** (aafUniGene): Returns an HTML representation with a link to the UniGene database. On the rare chance that more than one id is defined, more than one link will be returned.

is.annpkg

Determine if packages contain annotation

Description

Checks to see that the given packages contain all the necessary annotation environments to be usable by annaffy.

Usage

- `is.annpkg(packages, lib.loc = NULL)`

Arguments

- **packages**  character vector containing package names to check
- **lib.loc**  a character vector with path names of R libraries, or NULL. The default value of NULL corresponds to all libraries currently known. If the default is used, the loaded packages are searched before the libraries.

Value

A logical vector indicating whether the packages contain annotation data.

- Colin A. Smith, <annaffy@colinsmith.org>
Examples

pkgnames <- installed.packages()[,"Package"]
pkgnames <- pkgnames[1:5]
pkgnames[is.annpkg(pkgnames)]

selectorWidget

Dialog to select items from a list

Description

Presents the user with a dialog box to select items from a list.

Usage

selectorWidget(options, selected = character(0), title = "Selector",
ordersel = FALSE, ordernsel = FALSE,
height = max(10,min(20,length(options)))))

Arguments

options vector, options to be selected from
selected vector, subset of options selected by default
title character scalar, window title
ordersel boolean, keep the selected items in order?
ordernsel boolean, keep the not selected items in order?
height scalar, height of the two listboxes

Value

A character vector containing the selected items. If a vector of a different class was initially pro-
vided, it must be manually coerced back to the correct type.
