Package ‘convert’

January 14, 2017

Version 1.50.0

Title Convert Microarray Data Objects

Author Gordon Smyth <smyth@wehi.edu.au>,
James Wettenhall <wettenhall@wehi.edu.au>,
Yee Hwa (Jean Yang) <jean@biostat.ucsf.edu>,
Martin Morgan <mtmorgan@fhcrc.org> Martin Morgan

Maintainer Yee Hwa (Jean) Yang <jean@biostat.ucsf.edu>

Depends R (>= 2.6.0), Biobase (>= 1.15.33), limma (>= 1.7.0), marray,
utils, methods

Description Define coerce methods for microarray data objects.

coerce                  Convert Data Objects

Description

Convert between limma, marray and Biobase data objects.

Details

Objects can be converted (coerced) from one class to another using as(object,
Class) where object is an object to convert and Class is the name of the class to convert to. The following
conversions are provided:

<table>
<thead>
<tr>
<th>From:</th>
<th>To:</th>
</tr>
</thead>
<tbody>
<tr>
<td>RGList</td>
<td>marrayRaw</td>
</tr>
</tbody>
</table>
RGList and marrayRaw are coerced to NChannelSet. Channel values are not transformed. MAList and marrayNorm are coerced so that the ExpressionSet slot contains log-ratios (M-values) and the ExpressionSet object has the same number of columns as the original object. In this case, information on the A-values is lost.

There is intentionally no conversion from RGList or marrayRaw to ExpressionSet, as ExpressionSet is intended for expression values, not intensities.

as in the methods package.

Examples
```r
##first set up some fake intensity matrices
testRed <- matrix(rnorm(5*2),5,2,
dimnames=list(paste("gene",1:5, sep=""), c("S1", "S2")))
testGreen <- matrix(rnorm(5*2),5,2,
dimnames=list(paste("gene",1:5, sep=""), c("S1", "S2")))

##some sample/target info
testTarget <- data.frame(slide=c("S1", "S2"), Cy3=c("T", "C"),
Cy5=c("C", "T"), row.names=c("S1", "S2"))

maT <- new("marrayInfo", maLabels=c("S1", "S2"),
maInfo= testTarget)

##now create instances and convert
x <- new("RGList")
x$R <- testRed
dx$G <- testGreen
y <- as(x,"marrayRaw")
z <- as(x, "NChannelSet")

x <- new("marrayRaw")
x@maGf <- testGreen
x@maRf <- testRed
x@maTargets = maT
y <- as(x,"RGList")
z <- as(x, "NChannelSet")

x <- new("MAList")
y <- as(x,"marrayNorm")
```
we construct a reasonably complete fake, small instance of the marrayNorm class

x <- new("marrayNorm")
x@maM <- testRed
x@maA <- testGreen
maTargets(x) = maT
y <- as(x,"MAList")
y <- as(x, "ExpressionSet")

x <- new("MAList")
x$M <- testRed
x$A <- testGreen
x$targets <- testTarget
y <- as(x,"ExpressionSet")
