Package ‘interactiveDisplay’

April 26, 2017

Type Package
Title Package for enabling powerful shiny web displays of Bioconductor objects
Version 1.14.0
Date 2015-06-16
Author Shawn Balcome, Marc Carlson
Maintainer Shawn Balcome <balc0022@umn.edu>
Imports interactiveDisplayBase (>= 1.7.3), shiny, RColorBrewer, ggplot2, reshape2, plyr, gridSVG, XML, Category, AnnotationDbi
Depends R (>= 2.10), methods, BiocGenerics, grid
Suggests RUnit, hgu95av2.db, knitr, GenomicRanges, SummarizedExperiment, GOstats, ggbio, GO.db, Gviz, rtracklayer, metagenomeSeq, gplots, vegan, Biobase
Enhances rstudio
Description The interactiveDisplay package contains the methods needed to generate interactive Shiny based display methods for Bioconductor objects.
License Artistic-2.0
VignetteBuilder knitr
biocViews GO, GeneExpression, Microarray, Sequencing, Classification, Network, QualityControl, Visualization, Visualization, Genetics, DataRepresentation, GUI, AnnotationData
NeedsCompilation no

R topics documented:

altgr ......................................................... 2
bicgo ..................................................... 3
display ................................................... 3
expr ....................................................... 5
gridsvgjs .................................................. 5
Description

This opens a shiny visualization application in the browser based on ...

Usage

altgr(object, ...)

Arguments

object data object to display
... additional arguments passed to methods; currently unused.

Value

Any ...

See Also

Examples

if(interactive()) {

## Open an browser application for the purpose of manually biclustering an
## ExpressionSet object and obtaining a GO summary for a specific bicluster.

data(mmgr)
altgr(mmgr)

}
bicgo

bicgo: Open a Shiny Application for manual/interactive biclustering and GO exploration

Description
This opens a shiny visualization application in the browser based on the submitted ExpressionSet object.

Usage
bicgo(object, ...)

Arguments
- object: data object to display
- ...: additional arguments passed to methods; currently unused.

Value
Any ExpressionSet object.

See Also

Examples
if(interactive()) {
  ## Open an browser application for the purpose of manually biclustering an
  ## ExpressionSet object and obtaining a GO summary for a specific bicluster.
  data(expr)
  bicgo(expr)
}

display
display: Open a Shiny application for a Bioconductor object

Description
This opens a shiny visualization application in the browser based on the submitted object.

Usage
display(object, ...)

Arguments

object data object to display
...
additional arguments passed to methods; currently unused.

Value

Usually some variation of the initial input object, but it may be altered by the display widget (subset for example).

Author(s)

Shawn Balcome and Marc Carlson

See Also

Examples

if(interactive()) {

## draw a RangedSummarizedExperiment object
data(se)
display(se)

## draw a GRanges object
data(mmgr)
display(mmgr)

## some display methods allow subsetting.
## To take advantage, just use an assignment operator like this:
mmgr2 <- display(mmgr)

## draw a GRangesList object
data(mmgrl)
display(mmgrl)

## draw an ExpressionSet object
data(expr)
display(expr)

## draw an MRexperiment object (placeholder!!!)
data(mr)
display(mr)
}

**expr**

An Example ExpressionSet object

**Description**

The expression data are real but anonymized. The data are from an experiment that used Affymetrix U95v2 chips. The data were processed by dChip and then exported to R for analysis. The data illustrate ExpressionSet-class, with assayData containing the required matrix element exprs and an additional matrix se.exprs. se.exprs has the same dimensions as exprs. The phenoData and standard error estimates (se.exprs) are made up. The information in the "description" slot is fake.

**Details**

The data for 26 cases, labeled A to Z and 500 genes. Each case has three covariates: sex (male/female); type (case/control); and score (testing score).

**Examples**

data(expr)

---

**gridsvgjs**

gridsvgjs: Open a Shiny Application for a Grid Plot

**Description**

This opens a shiny visualization application in the browser based on the submitted plot.

**Usage**

gridsvgjs(object, ...)

**Arguments**

object data object to display
...

**Value**

Any grid based plot. For example: a plot produced with lattice, ggplot2 or biobase libraries.

**See Also**

Examples

```r
if(interactive()) {

## Send a grid based plot to a browser as a Javascript interactive SVG

library(ggplot2)
data(mtcars)
qp <- ggplot(mtcars, geom="density", fill=factor(cyl), alpha=I(.4))
gridsvgjs(qp)
}
```

gridtweak

gridtweak: Open a Shiny Application for the purpose of tweaking grid plots

Description

This opens a shiny visualization application in the browser.

Usage

`gridtweak(...)`

Arguments

... additional arguments passed to methods; currently unused.

Value

Any grid based plot. For example: a plot produced with lattice, ggplot2 or biobase libraries.

See Also

Examples

```r
if(interactive()) {

## Send a grid based plot to a browser as a Javascript interactive SVG

gridtweak()
}
```
**mmgr**  
*An Example GRanges Object*

**Description**
A toy GRanges object for demonstration purposes.

**Examples**
```r
data(mmgr)
```

**mmgrl**  
*An Example GRangesList Object*

**Description**
A toy GRangesList dataset derived from the GRanges dataset in this package for purposes of demonstration.

**Details**
The GRanges dataset was submitted to `display()` function, subsetting and several iterations of the results were fused into a GRangesList object. This is fake data.

**Examples**
```r
data(mmgrl)
```

**se**  
*An Example RangedSummarizedExperiment Object*

**Description**
A toy RangedSummarizedExperiment object for demonstration purposes.

**Examples**
```r
data(se)
```
simplenet

simplenet: Open a Shiny Application for ...

Description

This opens a shiny visualization application in the browser based on ...

Usage

simplenet(object, ...)

Arguments

object  data object to display
...
additional arguments passed to methods; currently unused.

Value

Any ...

See Also

Examples

if(interactive()) {

## Open an browser application for the purpose of manually biclustering an
## ExpressionSet object and obtaining a GO summary for a specific bicluster.

simplenet(mtcars)

}
