Package ‘keggorthology’

January 30, 2017

Title graph support for KO, KEGG Orthology
Version 2.26.0
Author VJ Carey <stvjc@channing.harvard.edu>
Description graphical representation of the Feb 2010 KEGG Orthology.
The KEGG orthology is a set of pathway IDs that are not to be confused with the KEGG ortholog IDs.
Depends R (>= 2.5.0), stats, graph, hgu95av2.db
Imports AnnotationDbi, graph, DBI, graph, grDevices, methods, stats, tools, utils
Suggests RBGL, ALL
Maintainer VJ Carey <stvjc@channing.harvard.edu>
License Artistic-2.0
biocViews Pathways, GraphAndNetwork, Visualization, KEGG
NeedsCompilation no

getKOprobes obtain probe set IDs associated with a KO term

Description
obtain probe set IDs associated with a KO term

Usage
getKOprobes(str, useAcc=TRUE, plat="hgu95av2", na.action=na.omit)
Arguments

str    string giving a KEGG orthology term
useAcc logical – use all accessible terms?
plat    platform corresponding to a bioconductor annotation package, e.g., hgu95av2.db
na.action function for dealing with NA

Details

Based on keggorthology read of KEGG orthology, March 2 2010. Specifically, we run wget on ftp://ftp.genome.jp/pub/kegg/brite/ko/ko00001.keg and use parsing and modeling code given in inst/keggHTML to generate a data frame respecting the hierarchy, and then keggDF2graph to construct the graph.

Looks up the requested term and gives back the unique probe set ids on the platform.

Value

character vector, typically processed by na.omit

Author(s)

Vince Carey <stvjc@channing.harvard.edu>

Examples

getKOtags("insulin")
es = acc(KOgraph, "Endocrine System")
nm = names(es[[1]])
nm
esp = lapply(nm, getKOprobes)
names(esp) = nm
sapply(esp, length)

Description

indented textual rendering of nodes of a hierarchical graph

Usage

indRender(klike, from=nodes(klike)[1], indent="")

Arguments

klike    a graph, with tree structure similar to KOgraph
from    a node name from which the rendering should proceed to all leaves
indent    token to use for indentation – will be replicated to depth of node to be rendered to its left
**keggDF2graph**

**Details**

Based on keggorthology read of KEGG orthology, March 2 2010. Specifically, we run wget on 
given in inst/keggHTML to generate a data frame respecting the hierarchy, and then keggDF2graph
to construct the graph.

**Value**

NULL

**Author(s)**

Vince Carey <stvjc@channing.harvard.edu>

**Examples**

```r
data(KOgraph)
indRender(KOgraph, "Human Diseases")
```

---

**Description**

create a graph from a specific data frame format for KEGG orthology

**Usage**

```r
keggDF2graph(df, root="KO.June07root")
data(KOgraph)
```

**Arguments**

- `df` the data frame
- `root` a name for root node

**Details**

the obvious directed graph structure from root to leaf nodes (pathway names) is instantiated for
the orthology, nodeData attribute tag is loaded with the numerical tag for the term in KEGG, and
nodeData attribute depth is loaded with depth from root

Based on keggorthology read of KEGG orthology, March 2 2010. Specifically, we run wget on 
given in inst/keggHTML to generate a data frame respecting the hierarchy, and then keggDF2graph
to construct the graph.

**Value**

a `graphNEL-class` instance
Note

This is only a support function. The graph is serialized in the package data directory.

Author(s)
