This document highlights the structure of the S4 classes and methods in the *isobar* package.

```r
> library(isobar)
```

## 1 Introduction

This documents highlights the structure of the S4 classes and methods in the *isobar* package.

## 2 Classes

### 2.1 IBSpectra

```r
> getClass("IBSpectra")
```

Virtual Class "IBSpectra" [package "isobar"]

Slots:

<table>
<thead>
<tr>
<th>Name</th>
<th>Class</th>

</table>

## 3 Session Information

*April 24, 2017*

*Florian P. Breitwieser, Jacques Colinge*
identifications and quantitative values. Spectra are identified as stemming from distinct peptides, and quantitative information of each spectrum are extracted from a certain m/z region.

IBSpectra class holds this qualitative and quantitative information. It is a virtual class. It extends eSet from Biobase to store meta-information of spectrum identifications and quantitative information (m/z and intensity) of reporter tags. eSet is extended by slots for protein grouping, tag names, tag masses and isotope impurity correction matrix.

ProteinGroup objects store the mapping and grouping of peptide level identifications to protein identifications.

IBSpectra is a virtual class. Currently used isobaric tagging kits iTRAQ 4plex and 8plex, and TMT 2plex and 6plex are implemented in the iTRAQ4plexSpectra, iTRAQ8plexSpectra, TMT2plexSpectra, TMT6plexSpectra, TMT6plexSpectra2, and TMT10plexSpectra, respectively. These are subclasses of IBSpectra and TMTSpectra, respectively, which in turn are virtual subclasses of IBSpectra.

2.2 ProteinGroup

> getClass("ProteinGroup")

Class "ProteinGroup" [package "isobar"]

Slots:

Name: spectrumToPeptide spectrumId
Class: character data.frame

Name: peptideSpecificity peptideNProtein
Class: data.frame matrix
mapped back to proteins. This mapping leads to protein groups, which explain the observed peptides according to the parsimony law.

A ProteinGroup object is generated when a IBSpectra object is created by readIBSpectra. Protein to peptide to spectrum mapping is extracted from a suitable identification format in the spectrum-level ratios of a certain experimental setup.

2.3 NoiseModel

> getClass("NoiseModel")

Virtual Class "NoiseModel" [package "isobar"]

Slots:

Name: na.region low.intensity f parameter
Class: numeric numeric function numeric

Known Subclasses: "ExponentialNoANoiseModel", "ExponentialNoiseModel", "InverseNoiseModel", "InverseNoANoiseModel", "GeneralNoiseModel"

in the spectrum-level ratios of a certain experimental setup.

---

1IBSpectra CSV, and MzIdentML format. Mascot DAT and Phenyx pidres.xml format converters to IBSpectra format are provided.
3 Session Information

The version number of R and packages loaded for generating the vignette were:

- R version 3.4.0 (2017-04-21), x86_64-pc-linux-gnu
- Locale: LC_CTYPE=en_US.UTF-8, LC_NUMERIC=C, LC_TIME=en_US.UTF-8,
