BSgenome.Celegans.UCSC.ce6

December 9, 2016

---

**Description**

Full genome sequences for Caenorhabditis elegans (Worm) as provided by UCSC (ce6, May 2008) and stored in Biostrings objects.

**Note**

This BSgenome data package was made from the following source data files:

chromFa.tar.gz from ftp://hgdownload.cse.ucsc.edu/goldenPath/ce6/bigZips/

See [BSgenomeForge](https://bioconductor.org/packages/BSgenomeForge) and the BSgenomeForge vignette (vignette("BSgenomeForge")) in the BSgenome software package for how to make a BSgenome data package.

**Author(s)**

The Bioconductor Dev Team

**See Also**

- BSgenome objects and the available.genomes function in the BSgenome software package.
- DNAString objects in the Biostrings package.
- The BSgenomeForge vignette (vignette("BSgenomeForge")) in the BSgenome software package for how to make a BSgenome data package.
Examples

BSgenome.Celegans.UCSC.ce6
genome <- BSgenome.Celegans.UCSC.ce6
seqlengths(genome)
genome$chrI # same as genome["chrI"]

## Upstream sequences
## Starting with BioC 3.0, the upstream1000, upstream2000, and
## upstream5000 sequences for ce6 are not included in the BSgenome data
## package anymore. However they can easily be extracted from the full
## genome sequences with something like:

library(TxDB.Celegans.UCSC.ce6.ensGene)
txdb <- TxDb.Celegans.UCSC.ce6.ensGene
gn <- sort(genes(txdb))
up1000 <- flank(gn, width=1000)
up1000seqs <- getSeq(genome, up1000)

## IMPORTANT: Make sure you use a TxDb package (or TranscriptDb object),
## that contains a gene model based on the exact same reference genome
## as the BSgenome object you pass to getSeq(). Note that you can make
## your own custom TranscriptDb object from various annotation resources.
## See the makeTranscriptDbFromUCSC(), makeTranscriptDbFromBiomart(),
## and makeTranscriptDbFromGFF() functions in the GenomicFeatures
## package.

## Genome-wide motif searching
## See the GenomeSearching vignette in the BSgenome software
## package for some examples of genome-wide motif searching using
## Biostrings and the BSgenome data packages:
if (interactive())
  vignette("GenomeSearching", package="BSgenome")
