BSgenome.Hsapiens.UCSC.hg17.masked

Full masked genome sequences for Homo sapiens (UCSC version hg17)

Description

Full genome sequences for Homo sapiens (Human) as provided by UCSC (hg17, May 2004) and stored in Biostrings objects. The sequences are the same as in BSgenome.Hsapiens.UCSC.hg17, except that each of them has the 4 following masks on top: (1) the mask of assembly gaps (AGAPS mask), (2) the mask of intra-contig ambiguities (AMB mask), (3) the mask of repeats from RepeatMasker (RM mask), and (4) the mask of repeats from Tandem Repeats Finder (TRF mask). Only the AGAPS and AMB masks are "active" by default.

Note

The masks in this BSgenome data package were made from the following source data files:

AGAPS masks: all the chr*_gap.txt.gz files from ftp://hgdownload.cse.ucsc.edu/goldenPath/hg17/database/
RM masks: http://hgdownload.cse.ucsc.edu/goldenPath/hg17/bigZips/chromOut.zip
TRF masks: http://hgdownload.cse.ucsc.edu/goldenPath/hg17/bigZips/chromTrf.zip

See ?BSgenome.Hsapiens.UCSC.hg17 in the BSgenome.Hsapiens.UCSC.hg17 package for information about how the sequences were obtained.

See ?BSgenomeForge and the BSgenomeForge vignette (vignette("BSgenomeForge")) in the BSgenome software package for how to make a BSgenome data package.

Examples

```r
genes <- BSgenome.Hsapiens.UCSC.hg17
seqlengths(genes)
genes$chr1 # a MaskedDNAString object!
## To get rid of the masks altogether:
unmasked(genes$chr1) # same as BSgenome.Hsapiens.UCSC.hg17$chr1
if ("AGAPS" %in% masknames(genes)) {
  ## Check that the assembly gaps contain only Ns:
  checkOnlyNsInGaps <- function(seq)
  {
    ## Replace all masks by the inverted AGAPS mask
    masks(seq) <- gaps(masks(seq)["AGAPS"])
    unique_letters <- uniqueLetters(seq)
    if (any(unique_letters != "N"))
      stop("assembly gaps contain more than just Ns")
  }

  ## A message will be printed each time a sequence is removed
  ## from the cache:
  options(verbose=TRUE)
  for (seqname in seqnames(genes)) {
    cat("Checking sequence", seqname, "...
    seq <- genes[[seqname]]
    checkOnlyNsInGaps(seq)
    cat("OK\n")
  }
}
```

See the `GenomeSearching` vignette in the `BSgenome` software package for some examples of genome-wide motif searching using `Biostrings` and the `BSgenome` data packages:

```r
if (interactive())
vignette("GenomeSearching", package="BSgenome")
```
