Index

hmceuB36 representations of HapMap snp data + expression data

Description
representations of HapMap snp data + expression data

Usage

# getSS("GGdata", "20") # for example, to get full expression, + genotypes
# on chr20

Format
ExpressionSet and SnpMatrix instances to be combined using getSS
Details

Instances of class `smlSet` are created from two basic sources.

First, the expression data for 90 CEU families in CEPH were obtained from SANGER GENEVAR project.

Second, data on forward non-redundant SNPs in these individuals the HapMap build 36 ftp site in march 2008. Full provenance information still to be supplied.

Value

instances of class `smlSet`

Note

As of March 2011 the smlSet is no longer serialized. Instead, use `getSS("GGdata", [chrs])` to create an smlSet with all probes and selected chromosomes. There is an instance of `ExpressionSet-class` named `ex` in the data folder of this package that will be united with genotype data using `getSS`.
