Objects from the Class

Objects can be created by calls of the form `new("cghExSet", phenoData, experimentData, annotation, exprs, logRatios)``.

Slots

- `cghAssays`: Object of class "AssayData" rectangular representation of logRatio data from CGH
- `cloneMeta`: Object of class "AnnotatedDataFrame" information on chromosome and offset of clones
- `assayData`: Object of class "AssayData" expression assay results
- `phenoData`: Object of class "AnnotatedDataFrame" sample level data
- `featureData`: Object of class "AnnotatedDataFrame" reporter level metadata for expression assay results
- `experimentData`: Object of class "MIAME" container for experiment documentation
- `annotation`: Object of class "character" identifiers for expression and CGH platforms, as a named vector with elements named 'exprs' and 'logRatios'
- `.__classVersion__`: Object of class "Versions"

Extends

Class `eSet-class`, directly. Class `VersionedBiobase-class`, by class "eSet", distance 2. Class `Versioned-class`, by class "eSet", distance 3.

Methods

- `cloneMeta` signature(cghSet = "cghExSet"): extract annotated data frame on clone locations for CGH component
- `cloneNames` signature(cghSet = "cghExSet"): extract character vector of clone IDs for CGH component
- `exprs` signature(object = "cghExSet"): extract expression assay results
- `initialize` signature(.Object = "cghExSet"): infrastructure
- `logRatios` signature(cghSet = "cghExSet"): extract CGH assay results
- `show` signature(object = "cghExSet"): display object in concise form
- "[" signature(object = "cghExSet"): when first index is set, subset expression features; when second, subset samples

Examples

data(neveCGHmatch)
logRatios(neveCGHmatch)[1:4,1:4]
The individual datasets (aCGH and expression assays) take the form of a cghSet for neveCGHmatch and an ExpressionSet for neveRMAmatch. There are only 50 samples because only 50 could be aligned on the given sample name tokens in the caArrayDB data as of June 9 2007. Those sample name tokens are very mangled in the CEL files.

The combined data structure neveExCGH has a special container class cghExSet.
