### Description

This function prints values for `PKG_LIBS` and `PKG_CPPFLAGS` variables for use in Makevars files. See `vignette("Rhtslib")` for details. The environment variable `RHTSLIB_RPATH` can be used to over-ride the inferred location of the installed package.

### Usage

```
pkgconfig(opt = c("PKG_LIBS", "PKG_CPPFLAGS"))
```

**Arguments**

opt                    A scalar character from the list of available options; default is PKG\_LIBS.

**Value**

The function prints the PKG\_LIBS or PKG\_CPPFLAGS value and returns an invisible NULL.
