

# Package ‘autonomics’

May 15, 2025

**Type** Package

**Title** Unified Statistical Modeling of Omics Data

**Version** 1.17.0

**Description** This package unifies access to Statistical Modeling of Omics Data.

Across linear modeling engines (lm, lme, lmer, limma, and wilcoxon).

Across coding systems (treatment, difference, deviation, etc).

Across model formulae (with/without intercept, random effect, interaction or nesting).

Across omics platforms (microarray, rnaseq, msproteomics, affinity proteomics, metabolomics).

Across projection methods (pca, pls, sma, lda, spls, opl).s).

Across clustering methods (hclust, pam, cmeans).

It provides a fast enrichment analysis implementation.

And an intuitive contrastogram visualisation to summarize contrast effects in complex designs.

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**VignetteBuilder** knitr

**biocViews** Software, DataImport, Preprocessing, DimensionReduction,  
PrincipalComponent, Regression, DifferentialExpression,  
GeneSetEnrichment, Transcriptomics, Transcription,  
GeneExpression, RNASeq, Microarray, Proteomics, Metabolomics,  
MassSpectrometry,

**BugReports**

<https://gitlab.uni-marburg.de/fb20/ag-graumann/software/autonomics/issues>

**RoxygenNote** 7.3.1

**Depends** R (>= 4.0)

**Imports** abind, BiocFileCache, BiocGenerics, bit64, cluster,  
codingMatrices, colorspace, data.table, dplyr, edgeR, ggforce,  
ggplot2, ggrepel, graphics, grDevices, grid, gridExtra, limma,  
magrittr, matrixStats, methods, MultiAssayExperiment, parallel,  
RColorBrewer, rlang, R.utils, readxl, S4Vectors, scales, stats,  
stringi, SummarizedExperiment, survival, tidyr, tidyselect,  
tools, utils, vsn

**Suggests** affy, AnnotationDbi, AnnotationHub, apcluster, Biobase,  
BiocManager, BiocStyle, Biostrings, coin, diagram, DBI, e1071,  
ensemldb, GenomicDataCommons, GenomicRanges, GEOquery, ggtext,  
hgu95av2.db, ICSNP, jsonlite, knitr, lme4, lmerTest, MASS,

patchwork, mixOmics, mpm, nlme, OlinkAnalyze, org.Hs.eg.db,  
 org.Mm.eg.db, pcaMethods, pheatmap, progeny, propagate, RCurl,  
 RSQLite, remotes, rmarkdown, ropis, Rsubread, readODS,  
 rtracklayer, statmod, testthat, UniProt.ws, writexl, XML

**git\_url** <https://git.bioconductor.org/packages/autonomics>

**git\_branch** devel

**git\_last\_commit** f051989

**git\_last\_commit\_date** 2025-04-15

**Repository** Bioconductor 3.22

**Date/Publication** 2025-05-15

**Author** Aditya Bhagwat [aut, cre],

Richard Cotton [ctb],

Shahina Hayat [ctb],

Laure Cougnaud [ctb],

Witold Szymanski [ctb],

Vanessa Beutgen [ctb],

Willem Ligtenberg [ctb],

Hinrich Goehlmann [ctb],

Karsten Suhre [ctb],

Johannes Graumann [aut, sad]

**Maintainer** Aditya Bhagwat <[aditya.bhagwat@uni-marburg.de](mailto:aditya.bhagwat@uni-marburg.de)>

|--------|--------------------------------|
| .coxph | <i>Fit onefeature survival</i> |
|--------|--------------------------------|

---

## Description

Fit onefeature survival

## Usage

```
.coxph(timetoevent, event, expr)
.survdiff(timetoevent, event, expr)
.logrank(timetoevent, event, expr)
```

## Arguments

|             |  |
|-------------|--|
| timetoevent | numeric (time to event)  |
| event       | numeric (1=event, 0=not)                                       |
| expr        | numeric (.coxph) or twolevel-factor (.survdiff, .logrank_test) |

**Examples**

```
# Prepare
  object <- survival_example()
  timetoevent <- object$timetoevent
  event <- object$event
  expr <- values(object)[1,]
  quantile <- factor(dplyr::ntile(expr, 2))
# Survival
  .coxph(timetoevent, event, expr)
  .survdifftimetoevent, event, quantile)
  .logrank(timetoevent, event, quantile)
# Sumexp
  fit_survival(object)
```

---

`.extract_p_features`     *Extract coefficient features*

---

**Description**

Extract coefficient features

**Usage**

```
.extract_p_features(
  object,
  coefs,
  p = 0.05,
  fit = fits(object),
  combiner = "|",
  features = NULL,
  verbose = TRUE
)

.extract_fdr_features(
  object,
  coefs,
  fdr = 0.05,
  fit = fits(object),
  combiner = "|",
  features = NULL,
  verbose = TRUE
)

.extract_effectsize_features(
  object,
  coefs,
  effectsize = 1,
  fit = fits(object),
  combiner = "|",
  features = NULL,
  verbose = TRUE
)
```

```

)

.extract_sign_features(
  object,
  coefs,
  sign,
  fit = fits(object)[1],
  combiner = "|",
  features = NULL,
  verbose = TRUE
)

.extract_n_features(
  object,
  coefs,
  combiner = "|",
  n,
  fit = fits(object)[1],
  features = NULL,
  verbose = TRUE
)

extract_coef_features(
  object,
  fit = fits(object)[1],
  coefs = autonomics::coefs(object, fit = fit),
  combiner = "|",
  decreasing = FALSE,
  p = 1,
  fdr = 1,
  effectsize = 0,
  sign = c(-1, +1),
  n = 4,
  features = NULL,
  verbose = TRUE
)

```

### Arguments

|            |   |
|------------|---|
| object     | SummarizedXExperiment                                 |
| coefs      | subset of coefs(object)                               |
| p          | p threshold   |
| fit        | subset of fits(object)                                |
| combiner   | ' ' or '&': how to combine multiple fits/coefs        |
| features   | features to include no matter what (character vector) |
| verbose    | TRUE or FALSE   |
| fdr        | fdr threshold   |
| effectsize | effectsize threshold                                  |
| sign       | effect sign   |
| n          | number of top features (Inf means all)                |
| decreasing | TRUE or FALSE   |

**Value**

SummarizedExperiment

**Examples**

```
# Read and Fit
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma()

```

---

|        |                    |
|--------|--------------------|
| .merge | <i>Clean Merge</i> |
|--------|--------------------|

---

**Description**

Clean Merge

**Usage**

```
.merge(dt1, dt2, by)
```

**Arguments**

- dt1            data.table
- dt2            data.table
- by             string

**Examples**

```
require(data.table)
dt1 <- data.table(feature_id = c('PG1', 'PG2'), gene = c('G1', 'G2'))
dt2 <- data.table(feature_id = c('PG1', 'PG2'), protein = c('P1', 'P2'))
dt1 %<>% .merge(dt2, by = 'feature_id')
dt1
```

---

*.read\_compounddiscoverer*

*Read compound discoverer files as-is*

---

**Description**

Read compound discoverer files as-is

**Usage**

```
.read_compounddiscoverer(  
  file,  
  quantity = guess_compounddiscoverer_quantity(file),  
  colname_format = NULL,  
  mod_extract = NULL,  
  verbose = TRUE  
)
```

**Arguments**

|                |   |
|----------------|---|
| file           | compound discoverer file                      |
| quantity       | string  |
| colname_format | function to reformat column names             |
| mod_extract    | function to extract MS modi from sample names |
| verbose        | TRUE / FALSE                                  |

**Value**

data.table

---

*.read\_compounddiscoverer\_masslist*

*Read compound discoverer masslist files as-is*

---

**Description**

Read compound discoverer masslist files as-is

**Usage**

```
.read_compounddiscoverer_masslist(file, verbose = TRUE)
```

### Arguments

file                    compound discoverer masslist file  
verbose                TRUE / FALSE

### Value

data.table

---

.read\_diann\_precursors  
*Read diann*

---

### Description

Read diann

### Usage

```
.read_diann_precursors(file, Lib.PG.Q = 0.01, verbose = TRUE)
```

```
.read_diann_proteingroups(file, Lib.PG.Q = 0.01)
```

```
read_diann_proteingroups(  
  file,  
  Lib.PG.Q = 0.01,  
  simplify_snames = TRUE,  
  rm_contaminants = TRUE,  
  impute = FALSE,

  fit = if (plot) "limma" else NULL,  
  formula = as.formula("~ subgroup"),  
  block = NULL,  
  coefs = NULL,  
  contrasts = NULL,  
  palette = NULL,  
  verbose = TRUE  
)
```

```
read_diann(...)
```

### Arguments

file                    'report.tsv' file  
Lib.PG.Q                Lib.PG.Q cutoff  
verbose                TRUE or FALSE  
simplify\_snames        TRUE or FALSE: simplify (drop common parts in) samplenames ?

```

rm_contaminants      TRUE or FALSE: rm contaminants ?
impute               TRUE or FALSE: impute group-specific NA values ?
plot                 TRUE or FALSE
pca                  TRUE or FALSE: run pca ?
pls                  TRUE or FALSE: run pls ?
fit                  model engine: 'limma', 'lm', 'lme(r)', 'wilcoxon' or NULL
formula              model formula
block                model blockvar: string or NULL
coefs                model coefficients of interest: character vector or NULL
contrasts            coefficient contrasts of interest: character vector or NULL
palette              color palette: named string vector
...                  used to maintain deprecated functions

```

**Value**

data.table or SummarizedExperiment

**Examples**

```

# Read
file <- download_data('dilution.report.tsv')
.read_diann_precursors(file)      # precursors longdt

.read\_rnaseq\_bams      *Read rnaseq counts/bams*

---

**Description**

Read rnaseq counts/bams

**Usage**

```

.read_rnaseq_bams(
  dir,
  paired,
  genome,
  nthreads = detectCores(),
  sfile = NULL,

```

```
    by.y = NULL,
    ensdb = NULL,
    verbose = TRUE
)

.read_rnaseq_counts(
  file,
  fid_col = 1,
  sfile = NULL,
  by.y = NULL,
  ensdb = NULL,
  verbose = TRUE
)

read_rnaseq_bams(
  dir,
  paired,
  genome,
  nthreads = detectCores(),
  sfile = NULL,
  by.y = NULL,
  block = NULL,
  formula = as.formula("~ subgroup"),
  min_count = 10,
  pseudo = 0.5,
  ensdb = NULL,
  tpm = FALSE,
  cpm = TRUE,
  log2 = TRUE,
  plot = FALSE,
  label = "feature_id",
  pca = plot,
  pls = plot,
  fit = if (plot) "limma" else NULL,
  voom = cpm,
  coefs = NULL,
  contrasts = NULL,
  palette = NULL,
  verbose = TRUE
)

read_rnaseq_counts(
  file,
  fid_col = 1,
  sfile = NULL,
  by.y = NULL,
  formula = as.formula("~ subgroup"),
  block = NULL,
  min_count = 10,
  pseudo = 0.5,
  tpm = FALSE,
  ensdb = NULL,
```

```

    cpm = !tpm,
    log2 = TRUE,
    plot = FALSE,
    label = "feature_id",
    pca = plot,

```

### Arguments

|                        |   |
|------------------------|---|
| <code>dir</code>       | read_rnaseq_bams: bam/sam dir   |
| <code>paired</code>    | read_rnaseq_bams: TRUE/FALSE : paired end reads ?                     |
| <code>genome</code>    | read_rnaseq_bams: 'mm10', 'hg38', etc. or GTF file                    |
| <code>nthreads</code>  | read_rnaseq_bams: nthreads used by Rsubread::featureCounts()          |
| <code>sfile</code>     | sample file   |
| <code>by.y</code>      | sample file mergeby column  |
| <code>ensdb</code>     | EnsDb with genesizes : e.g. AnnotationHub::AnnotationHub[['AH64923']] |
| <code>verbose</code>   | TRUE or FALSE: message?   |
| <code>file</code>      | count file  |
| <code>fid_col</code>   | featureid column (number or string)                                   |
| <code>block</code>     | model blockvar: string or NULL  |
| <code>formula</code>   | model formula   |
| <code>min_count</code> | min feature count required in some samples                            |
| <code>pseudo</code>    | pseudocount added to prevent -Inf log2 values                         |
| <code>tpm</code>       | TRUE or FALSE : add tpm to assays ( counts / libsize / genelength ) ? |
| <code>cpm</code>       | TRUE or FALSE: add cpm to assays ( counts / effectivelibsize ) ?      |
| <code>log2</code>      | TRUE or FALSE: log2 transform ?                                       |
| <code>plot</code>      | TRUE or FALSE: plot?  |
| <code>label</code>     | fvar  |
| <code>pca</code>       | TRUE or FALSE: perform and plot pca?                                  |
| <code>pls</code>       | TRUE or FALSE: run pls ?  |
| <code>fit</code>       | model engine: 'limma', 'lm', 'lme(r)', 'wilcoxon' or NULL             |
| <code>voom</code>      | model weights to be computed? TRUE/FALSE                              |
| <code>coefs</code>     | model coefficients of interest: string vector or NULL                 |
| <code>contrasts</code> | model coefficient contrasts of interest: string vector or NULL        |
| <code>palette</code>   | color palette : named string vector                                   |

### Value

SummarizedExperiment

**Author(s)**

Aditya Bhagwat, Shahina Hayat

**Examples**

```

| significancevar | 'p' or 'fdr'             |
| significance    | fraction : pvalue cutoff |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma', coef = 't3-t0')
fdt(object)
fdt(abstract_fit(object))
```

---

add\_adjusted\_pvalues *Add adjusted pvalues*

---

**Description**

Add adjusted pvalues

**Usage**

```
add_adjusted_pvalues(object, ...)

## S3 method for class 'data.table'
add_adjusted_pvalues(
  object,
  method = "fdr",
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  verbose = TRUE,
  ...
)

## S3 method for class 'SummarizedExperiment'
add_adjusted_pvalues(
  object,
  method = "fdr",
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  verbose = TRUE,
  ...
)
```

**Arguments**

|         |   |
|---------|---|
| object  | SummarizedExperiment or (feature) data.table      |
| ...     | for s3 dispatch                                   |
| method  | 'fdr', 'bonferroni', ... (see 'p.adjust.methods') |
| fit     | 'limma', 'lm', 'lme', 'lmer'                      |
| coefs   | coefficient (string)                              |
| verbose | TRUE or FALSE                                     |

**Value**

SummarizedExperiment

**Examples**

```

file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fdt(object) %<>% extract(, 1:2)
object %<>% fit_limma()
object %<>% extract(order(fdt(.)$`p~Adult-X30dpt~limma`), )
  fdt(object)
(fdt(object) %<>% add_adjusted_pvalues('fdr'))
(fdt(object) %<>% add_adjusted_pvalues('fdr')) # smart enough not to add second column
(fdt(object) %>% add_adjusted_pvalues('bonferroni'))

```

---

|                 |                        |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file, fit = 'limma')  
object %<>% add_adjusted_pvalues()  
fdt(object)  
fdt(add_facetvars(object))
```

---

|                            |                                    |
|----------------------------|------------------------------------|
| add_opentargets_by_uniprot | <i>Add opentargets annotations</i> |
|----------------------------|------------------------------------|

---

**Description**

Add opentargets annotations

**Usage**

```
add_opentargets_by_uniprot(  
  object,  
  cols = c("genesymbol", "genename", "function"),  
  verbose = TRUE  
)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| cols    | character vector     |
| verbose | TRUE or FALSE        |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% add_opentargets_by_uniprot()
```

---

add\_psp

*Add psp*

---

**Description**

Add PhosphoSitePlus literature counts

**Usage**

```
add_psp(
  object,
  pspfile = file.path(R_user_dir("autonomics", "cache"), "phosphositeplus",
    "Phosphorylation_site_dataset.gz")
)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| pspfile | phosphositeplus file |

**Details**

Go to [www.phosphosite.org](http://www.phosphosite.org)  
 Register and Login.  
 Download Phosphorylation\_site\_dataset.gz'.  
 Save into: file.path(R\_user\_dir('autonomics','cache'),'phosphositeplus')

**Value**

SummarizedExperiment

**Examples**

```
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_phosphosites(fosfile = fosfile, profile = profile)
fdt(object)
object %<>% add_psp()
fdt(object)
```

---

add\_smiles

*Add smiles*

---

**Description**

Add smiles

**Usage**

```
add_smiles(object)
```

**Arguments**

object            character/factor vector with pubchem ids

**Value**

character/factor vector

**References**

<https://pubchemdocs.ncbi.nlm.nih.gov/pug-rest-tutorial>

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
# add_smiles(object[1:10, ]) # seems down
```

---

altenrich

*Alternative Enrichment Analysis*

---

**Description**

Alternative Enrichment Analysis

**Usage**

```

altenrich(
  object,
  pathwaydt,
  genevar = "gene",
  genesep = "[ ;]",
  coef = autonomics::coefs(object)[1],
  fit = fits(object)[1],
  significancevar = "p",
  significance = 0.05,
  effectsize = 0,
  n = 3,
  genes = FALSE,
  verbose = TRUE
)

```

**Arguments**

|                 |  |
|-----------------|--|
| object          | SummarizedExperiment                                       |
| pathwaydt       | data.table, e.g. <a href="#">read_msigt</a>                |
| genevar         | gene fvar  |
| genesep         | string or NULL   |
| coef            | string in <code>coefs(object)</code>                       |
| fit             | 'limma', 'lm', 'lme', 'lmer', 'wilcoxon'                   |
| significancevar | 'p' or 'fdr'   |
| significance    | significance cutoff  |
| effectsized     | effectsized cutoff   |
| n               | no of detected genes required (for geneset to be examined) |
| genes           | whether to record genes                                    |
| verbose         | whether to msg   |

**Details**

This is an alternative enrichment analysis implementation. It is more modular: uses four times `.enrichment(VERBOSE)?` as backend. But also four times slower than `enrichment`, so not recommended. It is retained for testing purposes.

This alternative enrichment implementation

plot = pca & !is.null(fit),
label = "feature_id",
palette = NULL,
verbose = TRUE
)

```

### Arguments

|           |  |
|-----------|--|
| object    | SummarizedExperiment   |
| pca       | TRUE / FALSE: perform pca ?  |
| pls       | TRUE / FALSE: perform pls ?  |
| fit       | linmod engine: 'limma', 'lm', 'lme(r)', 'lmer', 'wilcoxon'   |
| formula   | model formula  |
| drop      | TRUE / FALSE : drop varname in designmat ?   |
| codingfun | factor coding function <ul style="list-style-type: none"> <li>• <code>contr.treatment</code>: <math>\text{intercept} = y_0</math>, <math>\text{coef} = y_i - y_0</math></li> <li>• <code>contr.treatment.explicit</code>: <math>\text{intercept} = y_0</math>, <math>\text{coef} = y_i - y_0</math></li> <li>• <code>code_control</code>: <math>\text{intercept} = y_{\text{mean}}</math>, <math>\text{coef} = y_i - y_0</math></li> <li>• <code>contr.diff</code>: <math>\text{intercept} = y_0</math>, <math>\text{coef} = y_i - y_{(i-1)}</math></li> <li>• <code>code_diff</code>: <math>\text{intercept} = y_{\text{mean}}</math>, <math>\text{coef} = y_i - y_{(i-1)}</math></li> <li>• <code>code_diff_forward</code>: <math>\text{intercept} = y_{\text{mean}}</math>, <math>\text{coef} = y_i - y_{(i+)}</math></li> <li>• <code>code_deviation</code>: <math>\text{intercept} = y_{\text{mean}}</math>, <math>\text{coef} = y_i - y_{\text{mean}}</math> (drop last)</li> <li>• <code>code_deviation_first</code>: <math>\text{intercept} = y_{\text{mean}}</math>, <math>\text{coef} = y_i - y_{\text{mean}}</math> (drop first)</li> <li>• <code>code_helmert</code>: <math>\text{intercept} = y_{\text{mean}}</math>, <math>\text{coef} = y_i - \text{mean}(y_0:(y_i-1))</math></li> <li>• <code>code_helmert_forward</code>: <math>\text{intercept} = y_{\text{mean}}</math>, <math>\text{coef} = y_i - \text{mean}(y_{(i+1):y_p})</math></li> </ul> |
| contrasts | model coefficient contrasts of interest: string vector or NULL   |
| coefs     | model coefficients of interest: string vector or NULL  |
| block     | model blockvar   |
| weightvar | NULL or name of weight matrix in <code>assays(object)</code>   |
| plot      | TRUE / FALSE   |
| label     | fvar   |
| palette   | NULL or colorvector  |
| verbose   | TRUE / FALSE: message?   |

### Value

SummarizedExperiment

### Examples

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% analyze()

```

---

annotate\_compounddiscoverer  
*Read compound discoverer output*

---

**Description**

Read compound discoverer output

**Usage**

```

annotate_compounddiscoverer(
  x,
  dir = getwd(),
  files = list.files(path = dir, pattern = ".*masslist.*\\.xlsx$", ignore.case = TRUE,
    full.names = TRUE),
  verbose = TRUE
)

```

**Arguments**

|         |  |
|---------|--|
| x       | SummarizedExperiment (read_compounddiscoverer) |
| dir     | compound discoverer output directory           |
| files   | compound discoverer masslist files             |
| verbose | TRUE or FALSE : message ?                      |

**Value**

SummarizedExperiment

---

annotate\_maxquant      *Annotate maxquant*

---

**Description**

Annotate maxquant data.table

**Usage**

```

annotate_maxquant(
  dt,
  uniprothdrs,
  contaminanths,
  maxquanths,
  restapi = FALSE,
  verbose = TRUE
)

```

**Arguments**

dt data.table : output of read\_maxquant\_(proteingroups|phosphosites)  
 uniprothdrs data.table : output of read\_uniprot  
 contaminanthdrs data.table : output of read\_uniprot  
 maxquanthdrs data.table : output of read\_uniprot  
 restapi logical(1) : use uniprot restapi to complete missing annotations ?  
 verbose logical(1) : message ?

**Details**

Uncollapse, annotate, curate, recollapse, name

**Value**

data.table

**Examples**

```
# Fukuda 2020: contaminants + maxquanthdrs
#-----
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
dt <- .read_maxquant_proteingroups(file)
dt[, 1:2]
uniprothdrs <- NULL
contaminanthdrs <- read_contaminantdt()
maxquanthdrs <- parse_maxquant_hdrs(dt$`Fasta headers`); dt$`Fasta headers` <- NULL
dt %<>% annotate_maxquant(uniprothdrs, contaminanthdrs, maxquanthdrs)
dt[, 1:9]
dt[reverse== '+', 1:9]
dt[contaminant== '+', 1:9]

# Billing 2019: uniprothdrs + contaminants + maxquanthdrs
#-----
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
upfile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
prodt <- .read_maxquant_proteingroups(profile); prodt[, 1:2]
fosdt <- .read_maxquant_phosphosites(fosfile, profile); fosdt[, 1:3]
uniprothdrs <- read_uniprot(upfile)
contaminanthdrs <- read_contaminantdt()
maxquanthdrs <- parse_maxquant_hdrs(prodt$`Fasta headers`)
annotate_maxquant(prodt, uniprothdrs, contaminanthdrs, maxquanthdrs)[, 1:8]
annotate_maxquant(fosdt, uniprothdrs, contaminanthdrs, maxquanthdrs)[, 1:8]
```

---

annotate\_uniprot\_rest *Annotate uniprot/ensp*

---

**Description**

Annotate uniprot/ensp

**Usage**

```
annotate_uniprot_rest(x, columns = UNIPROTCOLS, verbose = TRUE)
```

**Arguments**

|         |                  |
|---------|------------------|
| x       | character vector |
| columns | character vector |
| verbose | TRUE or FALSE    |

**Value**

data.table(dbid, uniprot, reviewed, protein, gene, canonical, isoform, fragment, existence, organism, full)

**Examples**

```
annotate_uniprot_rest( x = c('P00761', 'Q32MB2') )
annotate_uniprot_rest( x = c('ENSBTAP00000006074', 'ENSP00000377550') )
```

---

```
assert_is_valid_sumexp
```

*Assert that x is a valid SummarizedExperiment*

---

**Description**

Assert that x is a valid SummarizedExperiment

**Usage**

```
assert_is_valid_sumexp(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |                        |
|--------|------------------------|
| x      | SummarizedExperiment   |
| .xname | see get_name_in_parent |

**Value**

TRUE or FALSE

**Examples**

```
# VALID
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
x <- read_metabolon(file)
assert_is_valid_sumexp(x)
# NOT VALID
rownames(SummarizedExperiment::colData(x)) <- NULL
# assert_is_valid_sumexp(x)
```

---

AUTONOMICS\_DATASETS     *Data used in examples/vignette/tests/longtests*

---

**Description**

Data used in examples/vignette/tests/longtests

**Usage**

AUTONOMICS\_DATASETS

**Format**

An object of class character of length 19.

**Examples**

AUTONOMICS\_DATASETS

---

bin                             *Bin continuous variable*

---

**Description**

Bin continuous variable

**Usage**

```
bin(object, ...)

## S3 method for class 'logical'
bin(object, ...)

## S3 method for class 'character'
bin(object, ...)

## S3 method for class 'factor'
bin(object, ...)

## S3 method for class 'numeric'
bin(object, probs = c(0, 0.33, 0.66, 1), ...)

## S3 method for class 'SummarizedExperiment'
bin(object, fvar, probs = c(0, 0.33, 0.66, 1), ...)
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | numeric or SummarizedExperiment |
| ...    | (S3 dispatch)                   |
| probs  | numeric                         |
| fvar   | string or NULL                  |

**Value**

factor vector

**Examples**

```
# Numeric vector
object <- rnorm(10, 5, 1)
bin(object)

# SummarizedExperiment
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
fdt(object <- read_maxquant_proteingroups(file))
fdt(bin(object, 'pepcounts'))
```

---

biplot

*Biplot*

---

**Description**

Biplot

**Usage**

```
biplot(
  object,
  method = biplot_methods(object)[1],
  by = biplot_by(object, method)[1],
  dims = biplot_dims(object, method, by)[1:2],
  color = if (method %in% DIMREDSUPER) by else "subgroup",
  shape = NULL,
  size = NULL,
  alpha = NULL,
  group = NULL,
  linetype = NULL,
  label = NULL,
  feature_label = "feature_id",
  fixed = list(shape = 15, size = 3),
  nx = 0,
  ny = 0,
  colorpalette = make_svar_palette(object, color),
  alphapalette = make_alpha_palette(object, alpha),
  title = paste0(method, guess_fitsep(fdt(object)), by),
  theme = ggplot2::theme(plot.title = element_text(hjust = 0.5), panel.grid =
    element_blank())
)
```

**Arguments**

|        |  |
|--------|--|
| object | SummarizedExperiment                       |
| method | 'pca', 'pls', 'lda', 'spls', 'opls', 'sma' |
| by     | svar                                       |
| dims   | numeric vector: e.g. 1:2                   |

|               |                              |
|---------------|------------------------------|
| color         | svar                         |
| shape         | svar                         |
| size          | svar                         |
| alpha         | svar                         |
| group         | svar                         |
| linetype      | svar                         |
| label         | svar                         |
| feature_label | fvar                         |
| fixed         | fixed plot aesthetics        |
| nx            | number of x features to plot |
| ny            | number of y features to plot |
| colorpalette  | character vector             |
| alphapalette  | character vector             |
| title         | string                       |
| theme         | ggplot2::theme output        |

**Value**

ggplot object

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% pca(ndim = 4)
object %<>% pls(ndim = 4)
biplot(object)
biplot(object, nx = 1)
biplot(object, dims = 3:4, nx = 1)
biplot(object, method = 'pls')
biplot(object, method = 'pls', dims = 3:4)
biplot(object, method = 'pls', dims = 3:4, group = 'Subject')
```

---

biplot\_corrections      *Biplot batch corrections*

---

**Description**

Biplot batch corrections

**Usage**

```
biplot_corrections(
  object,
  method = "pca",
  by = "sample_id",
  color = "subgroup",
  covariates = character(0),
  varcols = ceiling(sqrt(1 + length(covariates))),
  plot = TRUE
)
```

**Arguments**

|            |                                   |
|------------|-----------------------------------|
| object     | SummarizedExperiment              |
| method     | 'pca', 'pls', 'lda', or 'sma'     |
| by         | svar                              |
| color      | variable mapped to color (symbol) |
| covariates | covariates to be batch-corrected  |
| varcols    | number of covariate columns       |
| plot       | TRUE/FALSE: plot?                 |

**Value**

grid object

**See Also**

biplot\_covariates

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, pca = TRUE, plot = FALSE)
biplot_corrections(object, color = 'subgroup', covariates = c('Sex', 'Diabetes', 'Subject', 'Time'))
```

---

biplot\_covariates      *Biplot covariates*

---

**Description**

Biplot covariates

**Usage**

```
biplot_covariates(
  object,
  method = "pca",
  by = "sample_id",
  block = NULL,
  covariates = "subgroup",
  ndim = 6,
  dimcols = 1,
  varcols = length(covariates),
  plot = TRUE
)
```

**Arguments**

|            |  |
|------------|--|
| object     | SummarizedExperiment                           |
| method     | 'pca', 'pls', 'lda', or 'sma'                  |
| by         | svar   |
| block      | svar   |
| covariates | covariates: mapped to color or batch-corrected |
| ndim       | number of dimensions to plot                   |
| dimcols    | number of dimension columns                    |
| varcols    | number of covariate columns                    |
| plot       | TRUE or FALSE: whether to plot                 |

**Value**

ggplot object

**See Also**

biplot_covariates(object, covariates = c('subgroup'), dimcols = 3)
```

---

block2lme

*Put block in lme-compatible format*

---

**Description**

Put block in lme-compatible format

**Usage**

```
block2lme(block, ...)

## S3 method for class 'list'
block2lme(block, verbose = TRUE, ...)

## S3 method for class 'formula'
block2lme(block, verbose = TRUE, ...)

## S3 method for class 'character'
block2lme(block, verbose = TRUE, ...)

formula2lmer(formula, block)
```

```
formula2lm(formula, block)
```

```
block_vars(formula)
```

### Arguments

|         |                                    |
|---------|------------------------------------|
| block   | block: character vector or formula |
| ...     | required for s3 dispatch           |
| verbose | TRUE or FALSE                      |
| formula | formula                            |

### Examples

```
# lme: ensure lme-compatible block specification
block2lme( block = list(subject = ~1, batch = ~1))
block2lme( block = ~1|subject)
block2lme( block = c('subject', 'batch'))

# lm: integrate block into formula as random effect
formula2lm( formula = ~ subgroup, block = c('subject', 'batch') )

# lmer: integrate block into formula as fixed effect
formula2lmer( formula = ~ subgroup, block = c('subject', 'batch') )
formula2lmer( formula = ~ subgroup + (1|subject) + (1|batch) )
```

---

center

*Center samples*

---

### Description

Center samples

### Usage

```
center(
  object,
  selector = rep(TRUE, nrow(object)) == TRUE,
  fun = "median",
  verbose = TRUE
)
```

### Arguments

|          |  |
|----------|--|
| object   | SummarizedExperiment                   |
| selector | logical vector (length = nrow(object)) |
| fun      | aggregation function (string)          |
| verbose  | TRUE/FALSE                             |

### Value

SummarizedExperiment

**Examples**

```

require(matrixStats)
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fdt(object)$housekeeping <- FALSE
fdt(object)$housekeeping[order(rowVars(values(object)))[1:5]] <- TRUE
values(object)[, object$subgroup=='Adult'] %<>% magrittr::add(5)
plot_sample_densities(object)
plot_sample_densities(center(object))
plot_sample_densities(center(object, housekeeping))

```

code

*Contrast Code Factor***Description**

Contrast Code Factor for General Linear Model

**Usage**

```

code(object, ...)

## S3 method for class 'factor'

## S3 method for class 'data.table'
code(object, codingfun, vars = names(object), verbose = TRUE, ...)

contr.treatment.explicit(n)

code_control(n)

contr.diff(n)

code_diff(n)

code_diff_forward(n)

code_deviation(n)

code_deviation_first(n)

code_helmert(n)

code_helmert_forward(n)

```

**Arguments**

|           |                        |
|-----------|------------------------|
| object    | factor vector          |
| ...       | used for s3 dispatch   |
| codingfun | factor coding function |

- `contr.treatment`:  $\text{intercept} = y_0, \text{coefi} = y_i - y_0$
- `contr.treatment.explicit`:  $\text{intercept} = y_0, \text{coefi} = y_i - y_0$
- `code_control`:  $\text{intercept} = \text{ymean}, \text{coefi} = y_i - y_0$
- `contr.diff`:  $\text{intercept} = y_0, \text{coefi} = y_i - y_{(i-1)}$
- `code_diff`:  $\text{intercept} = \text{ymean}, \text{coefi} = y_i - y_{(i-1)}$
- `code_diff_forward`:  $\text{intercept} = \text{ymean}, \text{coefi} = y_i - y_{(i+)}$
- `code_deviation`:  $\text{intercept} = \text{ymean}, \text{coefi} = y_i - \text{ymean}$  (drop last)
- `code_deviation_first`:  $\text{intercept} = \text{ymean}, \text{coefi} = y_i - \text{ymean}$  (drop first)
- `code_helmert`:  $\text{intercept} = \text{ymean}, \text{coefi} = y_i - \text{mean}(y_0:(y_i-1))$
- `code_helmert_forward`:  $\text{intercept} = \text{ymean}, \text{coefi} = y_i - \text{mean}(y_{(i+1):y_p})$

|                      |                  |
|----------------------|------------------|
| <code>verbose</code> | TRUE or FALSE    |
| <code>vars</code>    | svars            |
| <code>n</code>       | character vector |

## Details

A General Linear Model contains:

- \* An Intercept Coefficient: expressing some form of sample average
- \* For each numeric variable: a slope coefficient
- \* For each k-leveled factor: (k-1) Contrast Coefficients.

The interpretation of (intercept and contrast) coefficients depends on the contrast coding function used. Several contrast coding functions are available in 'stats' and 'codingMatrices' But their (function and coefficient) namings are a bit confusing and unsystematic. Instead, the functions below offer an intuitive interface (to the otherwise powerful stats/codingMatrices packages). The names of these functions reflect the contrast coding used (treatment, backward, sum, or helmert contrasts). They also reflect the intercept interpretation (either first factor's first level or grand mean). They all produce intuitive coefficient names (e.g. 't1-t0' rather than just 't1'). They all have unit scaling (a coefficient of 1 means a backward of 1).

## Value

(explicitly coded) factor vector

## Examples

```
# Coding functions
x <- factor(paste0('t', 0:3))
xlevels <- levels(x)
contr.treatment(      xlevels)
contr.treatment.explicit(xlevels)
contr.diff(           xlevels)
code_control(         xlevels)
code_diff(            xlevels)
code_diff_forward(    xlevels)
code_deviation(       xlevels)
code_deviation_first( xlevels)
code_helmert(         xlevels)
code_helmert_forward( xlevels)

# Code
x %<>% code(contr.treatment)
x %<>% code(contr.treatment.explicit)
```

```

x %<>% code(contr.diff)
x %<>% code(code_control)
x %<>% code(code_diff)
x %<>% code(code_diff_forward)
x %<>% code(code_deviation)
x %<>% code(code_deviation_first)
x %<>% code(code_helmert)
x %<>% code(code_helmert_forward)

# Model
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma(codingfun = contr.treatment) # default
object %<>% fit_limma(codingfun = contr.treatment.explicit)
object %<>% fit_limma(codingfun = contr.diff)
object %<>% fit_limma(codingfun = code_control)
object %<>% fit_limma(codingfun = code_diff)
object %<>% fit_limma(codingfun = code_diff_forward)
object %<>% fit_limma(codingfun = code_deviation)
object %<>% fit_limma(codingfun = code_deviation_first)
object %<>% fit_limma(codingfun = code_helmert)
object %<>% fit_limma(codingfun = code_helmert_forward)

```

---

coefs

*Get coefs*

---

## Description

Get coefs

## Usage

```

coefs(object, ...)

## S3 method for class 'factor'
coefs(object, intercept = FALSE, ...)

## S3 method for class 'data.table'
coefs(object, fit = fits(object), intercept = FALSE, ...)

## S3 method for class 'SummarizedExperiment'
coefs(object, fit = fits(object), intercept = FALSE, ...)

```

## Arguments

|           |  |
|-----------|--|
| object    | factor, data.table, SummarizedExperiment         |
| ...       | required for s3 dispatch                         |
| intercept | TRUE or FALSE : whether to include the intercept |
| fit       | 'limma', 'lm', 'lme', 'lmer', 'wilcoxon'         |

## Value

character vector

**Examples**

```
# Factor
x <- factor(c('A', 'B', 'C'))
coefs(x)
coefs(code(x, contr.treatment.explicit))
coefs(code(x, code_control))

# SummarizedExperiment
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma')
coefs(object)
coefs(object, intercept = TRUE)
```

---

collapsed\_entrezg\_to\_symbol

*Collapsed entrezg to genesymbol*

---

**Description**

Collapsed entrezg to genesymbol

**Usage**

```
collapsed_entrezg_to_symbol(x, sep, orgdb)
```

**Arguments**

|       |                 |
|-------|-----------------|
| x     | charactervector |
| sep   | string          |
| orgdb | OrgDb           |

**Value**

character vector

**Examples**

```
if (requireNamespace('org.Hs.eg.db', quiet = TRUE)){
  x <- c('7448/3818/727', '5034/9601/64374')
  orgdb <- org.Hs.eg.db::org.Hs.eg.db
  collapsed_entrezg_to_symbol(x, sep = '/', orgdb = orgdb)
}
```

---

COMPOUNDDISCOVERER\_PATTERNS

*compound discoverer quantity patterns*

---

### Description

compound discoverer quantity patterns

### Usage

COMPOUNDDISCOVERER\_PATTERNS

### Format

An object of class character of length 2.

### Examples

COMPOUNDDISCOVERER\_PATTERNS

---

contrast\_coefs

*Get model coefs*

---

### Description

Get model coefs

### Usage

```
contrast_coefs(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  codingfun = contr.treatment.explicit,
  design = create_design(object, formula = formula, drop = drop, codingfun = codingfun,
    verbose = FALSE)
)

model_coefs(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  codingfun = contr.treatment.explicit,
  design = create_design(object, formula = formula, drop = drop, codingfun = codingfun,
    verbose = FALSE)
)
```

**Arguments**

|           |  |
|-----------|--|
| object    | SummarizedExperiment                   |
| formula   | formula                                |
| drop      | TRUE or FALSE                          |
| codingfun | coding function (e.g. contr.treatment) |
| design    | design matrix                          |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma()
model_coefs(object)
contrast_coefs(object)
```

---

contrast\_subgroup\_cols

*Row/Col contrasts*

---

**Description**

Row/Col contrasts

**Usage**

```
contrast_subgroup_cols(object, subgroupvar)
```

```
contrast_subgroup_rows(object, subgroupvar)
```

**Arguments**

|             |                      |
|-------------|----------------------|
| object      | SummarizedExperiment |
| subgroupvar | subgroup svar        |

**Value**

matrix

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object$subgroup <- paste0(object$Diabetes, '.', object$Time)
subgroup_matrix(object, subgroupvar = 'subgroup')
contrast_subgroup_cols(object, subgroupvar = 'subgroup')
contrast_subgroup_rows(object, subgroupvar = 'subgroup')
```

---

 counts

*Get/Set counts*

---

### Description

Get / Set counts matrix

### Usage

```
counts(object)

## S4 method for signature 'SummarizedExperiment'
counts(object)

counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
counts(object) <- value
```

### Arguments

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| value  | count matrix (features x samples) |

### Value

count matrix (get) or updated object (set)

### Examples

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
counts(object)[1:3, 1:3]
counts(object) <- values(object)
```

---

 counts2cpm

*Convert between counts and cpm/tpm*

---

### Description

Convert between counts and cpm/tpm

**Usage**

```
counts2cpm(x, libsize = scaledlibsizes(x))

cpm2counts(x, libsize)
```

**Arguments**

```
x                count/cpm matrix
libsize          (scaled) libsize vector
```

**Value**

cpm/tpm/count matrix

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
libsize <- scaledlibsizes(counts(object))
tpm <- counts2tpm(counts(object), genesize = 1)
cpm <- counts2cpm(counts(object), libsize)
counts <- cpm2counts(cpm, libsize)
sum(counts(object) - counts)
```

---

|            |                      |
|------------|----------------------|
| counts2tpm | <i>counts to tpm</i> |
|------------|----------------------|

---

**Description**

counts to tpm

**Usage**

```
counts2tpm(x, genesize)
```

**Arguments**

```
x                count matrix
genesize         genesize vector (kilobase)
```

**Value**

tpm matrix

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
counts(object)[1:3, 1:3]
counts2tpm(counts(object), genesize = 1)[1:3, 1:3]
```

---

`count_in`*Count/Collapse in/outside intersection*

---

**Description**

Count/Collapse in/outside intersection

**Usage**

```
count_in(x, ...)  
  
## S3 method for class 'character'  
count_in(x, y, ...)  
  
## S3 method for class 'factor'  
count_in(x, y, ...)  
  
## S3 method for class 'list'  
count_in(x, y, ...)  
  
collapse_in(x, ...)  
  
## S3 method for class 'character'  
collapse_in(x, y, sep, ...)  
  
## S3 method for class 'factor'  
collapse_in(x, y, sep, ...)  
  
## S3 method for class 'list'  
collapse_in(x, y, sep, ...)  
  
count_out(x, ...)  
  
## S3 method for class 'character'  
count_out(x, y, ...)  
  
## S3 method for class 'factor'  
count_out(x, y, ...)  
  
## S3 method for class 'list'  
count_out(x, y, ...)
```

**Arguments**

|                  |                      |
|------------------|----------------------|
| <code>x</code>   | character OR list    |
| <code>...</code> | used for S3 dispatch |
| <code>y</code>   | character            |
| <code>sep</code> | string               |

**Value**

number OR numeric

**Examples**

```
# Sets
contrast1 <- c('a', 'b', 'c', 'd')
pathway <- c('c', 'd', 'e', 'f')
contrast2 <- c('e', 'f', 'g', 'h')

# Count outside
count_out(contrast1, pathway)
count_out(list(contrast1 = contrast1, contrast2 = contrast2), pathway)

# Count inside
count_in(contrast1, pathway)
count_in(list(contrast1 = contrast1, contrast2 = contrast2), pathway)

# Collapse inside
collapse_in(contrast1, pathway, sep = ' ')
collapse_in(list(contrast1 = contrast1, contrast2 = contrast2), pathway, sep = ' ')
```

---

cpm

*Get/Set cpm*

---

**Description**

Get / Set cpm matrix

**Usage**

```
cpm(object)

## S4 method for signature 'SummarizedExperiment'
cpm(object)

cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
cpm(object) <- value
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| value  | cpm matrix (features x samples) |

**Value**

cpm matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
cpm(object)[1:3, 1:3]
cpm(object) <- values(object)
```

---

|               |                             |
|---------------|-----------------------------|
| create_design | <i>Create design matrix</i> |
|---------------|-----------------------------|

---

**Description**

Create design matrix for statistical analysis

**Usage**

```
create_design(object, ...)

## S3 method for class 'SummarizedExperiment'
create_design(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  codingfun = contr.treatment.explicit,
  verbose = TRUE,
  ...
)

## S3 method for class 'data.table'
create_design(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  codingfun = contr.treatment.explicit,
  verbose = TRUE,
  ...
)
```

**Arguments**

|           |                                    |
|-----------|------------------------------------|
| object    | SummarizedExperiment or data.frame |
| ...       | required to s3ify                  |
| formula   | formula with svars                 |
| drop      | whether to drop predictor names    |
| codingfun | factor coding function             |

- contr.treatment: intercept =  $y_0$ , coefi =  $y_i - y_0$
- contr.treatment.explicit: intercept =  $y_0$ , coefi =  $y_i - y_0$
- code\_control: intercept =  $y_{\text{mean}}$ , coefi =  $y_i - y_0$
- contr.diff: intercept =  $y_0$ , coefi =  $y_i - y_{(i-1)}$
- code\_diff: intercept =  $y_{\text{mean}}$ , coefi =  $y_i - y_{(i-1)}$

- `code_diff_forward`: intercept = ymean, coefi =  $y_i - y_{i+}$
- `code_deviation`: intercept = ymean, coefi =  $y_i - y_{\text{mean}}$  (drop last)
- `code_deviation_first`: intercept = ymean, coefi =  $y_i - y_{\text{mean}}$  (drop first)
- `code_helmert`: intercept = ymean, coefi =  $y_i - \text{mean}(y_0:(y_i-1))$
- `code_helmert_forward`: intercept = ymean, coefi =  $y_i - \text{mean}(y_{i+1}:y_p)$

verbose            whether to message

### Value

design matrix

### Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
unique(create_design(object))
unique(create_design(object, ~ Time))
unique(create_design(object, ~ Time, codingfun = contr.treatment.explicit))
unique(create_design(object, ~ Time, codingfun = contr.diff))
unique(create_design(object, ~ Time + Diabetes))
unique(create_design(object, ~ Time / Diabetes))
unique(create_design(object, ~ Time * Diabetes))
```

---

DATADIR

*Download autonomics example data*

---

### Description

Download autonomics example data

### Usage

DATADIR

```
download_data(
  filename = NULL,
  localdir = file.path(DATADIR, split_extract_fixed(filename, ".", 1)),
  verbose = TRUE,
  force = FALSE
)
```

### Arguments

| filename | file name                     |               |                         |
|----------|-------------------------------|---------------|-------------------------|
|          | 'atkin.somascan.adat'         | Halama, 2018  | effects of hypoglycemia |
|          | 'atkin.metabolon.xlsx'        |               |                         |
|          | 'billing16.bam.zip'           | Billing, 2016 | stemcell comparison     |
|          | 'billing16.rnacounts.txt'     |               |                         |
|          | 'billing16.somascan.adat'     |               |                         |
|          | 'billing16.proteingroups.txt' |               |                         |

|                               |               |                          |
|-------------------------------|---------------|--------------------------|
| 'billing19.rnacounts.txt'     | Billing, 2016 | stemcell differentiation |
| 'billing19.proteingroups.txt' |               |                          |
| 'billing19.phosphosites.txt'  |               |                          |
| 'ddglucose.proteingroups.txt' | Omics Module  | glycolysis inhibitor     |
| 'fukuda20.proteingroups.txt'  | Fukuda, 2020  | zebrafish development    |
| 'halama18.metabolon.xlsx'     | Halama, 2018  | glutaminase inhibitor    |

|          |                           |
|----------|---------------------------|
| localdir | local dir to save file to |
| verbose  | TRUE / FALSE              |
| force    | TRUE / FALSE              |

### Format

An object of class character of length 1.

### Value

local file path

### Examples

```
# Show available datasets
download_data()

# atkin 2018 - hypoglycemia - pubmed 30525282
# download_data('atkin.somascan.adat')           # somascan intensities
# download_data('atkin.metabolon.xlsx')          # metabolon intensities

# billing16 - stemcell characterization - pubmed 26857143
# download_data('billing16.proteingroups.txt')   # proteingroup ratios
# download_data('billing16.somascan.adat')       # somascan intensities
# download_data('billing16.rnacounts.txt')       # rnaseq counts
# download_data('billing16.bam.zip')              # rnaseq alignments

# billing19 - stemcell differentiation - pubmed 31332097
# download_data('billing19.proteingroups.txt')   # proteingroup ratios
# download_data('billing19.phosphosites.txt')    # phosphosite ratios
# download_data('billing19.rnacounts.txt')       # rnaseq counts

# fukuda20 - heart regeneration - pubmed PXD016235
# download_data('fukuda20.proteingroups.txt')   # proteingroup LFQ

# halama18 - glutaminase inhibition - pubmed 30525282
# download_data('halama18.metabolon.xlsx')      # metabolon intensities
```

---

default\_geom

*Default geom*

---

### Description

Default geom

**Usage**

```
default_geom(object, x, block = NULL)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| x      | svar                 |
| block  | svar or NULL         |

**Value**

character vector

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object$Age <- runif(min = 20, max = 60, n = ncol(object))
svars(object)
default_geom(object, x = 'Age')
default_geom(object, x = c('Age', 'Diabetes'))
default_geom(object, x = c('Age', 'Diabetes'), block = 'Subject')
```

---

|               |                      |
|---------------|----------------------|
| default_sfile | <i>Default sfile</i> |
|---------------|----------------------|

---

**Description**

Default sfile

**Usage**

```
default_sfile(file)
```

**Arguments**

|      |           |
|------|-----------|
| file | data file |
|------|-----------|

**Value**

sample file

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
default_sfile(file)
```

---

default\_subgroupvar     *Create default formula*

---

### Description

Create default formula

### Usage

```
default_subgroupvar(object)
```

```
default_formula(object)
```

### Arguments

object                    SummarizedExperiment

### Value

formula

### Examples

```
# Abundances
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
default_formula(object)
file <- download_data('billing16.proteingroups.txt')
object <- read_maxquant_proteingroups(file)
default_formula(object)
```

---

demultiplex                 *Demultiplex snames*

---

### Description

Demultiplex maxquant samplenames

### Usage

```
demultiplex(x, verbose = FALSE)
```

### Arguments

x                          character vector  
 verbose                  TRUE or FALSE

### Details

```
WT(L).KD(H).R1{H/L}    -> KD_WT.R1 WT(1).KD(2).R1{1}    -> WT.R1 WT.R1 -> WT.R1
```

**Value**

character

**Examples**

```
# uniplexed / intensity / ratio
demultiplex(c('KD.R1','OE.R1'))
demultiplex(c('WT(L).KD(M).OE(H).R1{M}','WT(L).KD(M).OE(H).R1{H}'))
demultiplex(c('WT(L).KD(M).OE(H).R1{M/L}','WT(L).KD(M).OE(H).R1{H/L}'))
# run / replicate
demultiplex(c('WT(L).OE(H).R1{L}','WT(L).OE(H).R1{H}')) # run
demultiplex(c('WT.R1(L).OE.R1(H){L}','WT.R1(L).OE.R1(H){H}')) # repl
# label / index
demultiplex(c('WT(L).OE(H).R1{L}','WT(L).OE(H).R1{H}')) # label
demultiplex(c('WT(1).OE(2).R1{1}','WT(1).OE(2).R1{2}')) # index
# with unused channels
demultiplex('WT(1).KD(2).OE(3).R1{6}')
```

dequantify

*Dequantify maxquant snames***Description**

Drop quantity ('Reporter intensity').  
Encode {channel} as suffix.

**Usage**

```
dequantify(x, quantity = guess_maxquant_quantity(x), verbose = FALSE)
```

**Arguments**

|          |   |
|----------|---|
| x        | character   |
| quantity | 'ratio', 'normalizedratio',<br>'LFQ intensity',<br>'intensity', 'labeledintensity' 'reporterintensity', 'correctedreporterinter |
| verbose  | TRUE or FALSE   |

**Details**

Ratio H/L WT(L).KD(H).R1 -> WT(L).KD(H).R1{H/L} LFQ intensity WT.R1 -> WT  
Reporter intensity 0 WT(126).KD(127).R1 -> WT(1).KD(2).R1{1}

**Value**

character

**Examples**

```

dequantify(c('Ratio H/L WT(L).KD(M).OE(H).R1',           # Ratios
             'Ratio M/L WT(L).KD(M).OE(H).R1'))
dequantify(c('Ratio H/L normalized WT(L).KD(M).OE(H).R1', # Norm. Ratios
             'Ratio M/L normalized WT(L).KD(M).OE(H).R1'))
dequantify(c('LFQ intensity WT.R1',                      # LFQ intensity
             'LFQ intensity KD.R1'))
dequantify(c('Reporter intensity 1 WT(126).KD(127).R1',  # Rep.intensities
             'Reporter intensity 2 WT(126).KD(127).R1'))

```

---

```
dequantify_compounddiscoverer
```

```
    dequantify_compounddiscoverer compound discoverer snames
```

---

**Description**

Drop quantity.

**Usage**

```

dequantify_compounddiscoverer(
  x,
  quantity = guess_compounddiscoverer_quantity(x),
  verbose = FALSE
)

```

**Arguments**

|          |               |                  |
|----------|---------------|------------------|
| x        | character     |                  |
| quantity | 'area',       | 'normalizedarea' |
| verbose  | TRUE or FALSE |                  |

**Details**

```

Norm. Area: 20230908_F143_HILICNEG.raw (F11) -> 20230908_F143_HILICNEG.raw (F11)
Area: 20230908_F143_HILICNEG.raw (F11) -> 20230908_F143_HILICNEG.raw (F11)

```

**Value**

character

**Examples**

```

dequantify_compounddiscoverer("Norm. Area: 20230908_F143_HILICNEG.raw (F11)") # Norm. Area
dequantify_compounddiscoverer("Area: 20230908_F143_HILICNEG.raw (F11)")      # Area

```

---

 DIMREDUN

*Dimension Reduction Methods*

---

**Description**

Dimension Reduction Methods

**Usage**

DIMREDUN

DIMREDSUPER

DIMREDENGINES

**Format**

An object of class character of length 2.

An object of class character of length 4.

An object of class character of length 6.

**Details**

- DIMREDUN: c('pca', 'sma')
- DIMREDSUPER: c('lda', 'pls', 'opls', 'spl'))
- DIMREDENGINES: c('pca', 'sma', 'lda', 'pls', 'opls', 'spl')

---

 download\_gtf

*Download GTF file*

---

**Description**

Download GTF file with feature annotations

**Usage**

```
download_gtf(
  organism,
  release = 100,
  gtffile = sprintf("%s/gtf/%s", R_user_dir("autonomics", "cache"),
    basename(make_gtf_url(organism, release) %>% substr(1, nchar(.) - 3)))
)
```

**Arguments**

|          |   |
|----------|---|
| organism | 'Homo sapiens', 'Mus musculus' or 'Rattus norvegicus' |
| release  | GTF release (number)                                  |
| gtffile  | string: path to local GTF file                        |

**Value**

gtffile path

**Examples**

```
organism <- 'Homo sapiens'  
# download_gtf(organism)
```

---

download\_mcclain21      *Download mcclain21 data*

---

**Description**

Download mcclain21 data

**Usage**

```
download_mcclain21(  
  counts_or_samples = "counts",  
  localdir = file.path(DATADIR, "mcclain21"),  
  force = FALSE  
)
```

**Arguments**

|                   |                       |
|-------------------|-----------------------|
| counts_or_samples | 'counts' or 'samples' |
| localdir          | dirname               |
| force             | TRUE or FALSE         |

**Details**

**Mc clain 2021: COVID19 transcriptomics:**

**Examples**

```
download_mcclain21('counts')  
download_mcclain21('samples')
```

---

|        |                                 |
|--------|---------------------------------|
| dt2mat | <i>'data.table' to 'matrix'</i> |
|--------|---------------------------------|

---

**Description**

Convert between 'data.table' and 'matrix'

**Usage**

```
dt2mat(x)

mat2dt(x, idvar)
```

**Arguments**

|       |                     |
|-------|---------------------|
| x     | data.table / matrix |
| idvar | idvar string        |

**Value**

matrix / data.table

**Examples**

```
x <- data.table::data.table(
  gene = c('ENSG001', 'ENSG002', 'ENSG003'),
  sampleA = c(1787, 10, 432),
  sampleB = c(1143, 3, 268))
dt2mat(x)
mat2dt(dt2mat(x), 'gene')
```

---

|            |                            |
|------------|----------------------------|
| enrichment | <i>Enrichment analysis</i> |
|------------|----------------------------|

---

**Description**

Are selected genes enriched in pathway?

**Usage**

```
enrichment(
  object,
  pathwaydt,
  fit = fits(object)[1],
  coef = coefs(object, fit = fit)[1],
  var = abstractvar(object, fit = fit, coef = coef),
  levels = fdt(object)[[var]] %>% base::levels() %>% extract(-1),
  genevar = "gene",
  genesep = "[ ,;]",
  n = 3,
```

```

    verbose = TRUE,
    genes = FALSE
  )

```

### Arguments

|           |                         |
|-----------|-------------------------|
| object    | SummarizedExperiment    |
| pathwaydt | pathway data.table      |
| fit       | string                  |
| coef      | string                  |
| var       | selection fvar          |
| levels    | selection levels        |
| genevar   | gene fvar               |
| genesep   | gene separator (string) |
| n         | number                  |
| verbose   | whether to msg          |
| genes     | whether to report genes |

### Details

Four enrichment analyses per geneset using the Fisher Exact Test (see four pvalues). Results are returned in a data.table

|                 |  |
|-----------------|--|
| in              | : genes in pathway   |
| in.det          | : detected genes in pathway  |
| in.sel          | : up/downregulated genes in pathway  |
| in.up(.genes)   | : upregulated genes in pathway   |
| in.down(.genes) | : downregulated genes in pathway   |
| out             | : genes outside pathway  |

  orgdb <- org.Hs.eg.db::org.Hs.eg.db
  entrezg_to_symbol(x = c('7448', '3818', '727'), orgdb)
}
```

---

extract\_rectangle      *Extract rectangle from omics file, data.table, or matrix*

---

## Description

Extract rectangle from omics file, data.table, or matrix

## Usage

```
extract_rectangle(x, ...)
```

```
## S3 method for class 'character'
```

```
extract_rectangle(  
  x,  
  rows = seq_len(nrows(x, sheet = sheet)),  
  cols = seq_len(ncols(x, sheet = sheet)),  
  verbose = FALSE,  
  transpose = FALSE,  
  drop = FALSE,  
  sheet = 1,  
  ...  
)
```

```
## S3 method for class 'data.table'
```

```
extract_rectangle(  
  x,  
  rows = seq_len(nrow(x)),  
  cols = seq_len(ncol(x)),  
  transpose = FALSE,  
  drop = FALSE,  
  ...  
)
```

```
## S3 method for class 'matrix'
```

```
extract_rectangle(  
  x,  
  rows = seq_len(nrow(x)),  
  cols = seq_len(ncol(x)),  
  transpose = FALSE,  
  drop = FALSE,  
  ...  
)
```

## Arguments

|         |                              |
|---------|------------------------------|
| x       | omics datafile or datatable  |
| ...     | allow for S3 method dispatch |
| rows    | numeric vector               |
| cols    | numeric vector               |
| verbose | logical                      |

|           |                   |
|-----------|-------------------|
| transpose | logical           |
| drop      | logical           |
| sheet     | numeric or string |

**Value**

matrix

**Examples**

```
# FROM FILE: extract_rectangle.character
#=====
x <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')

```

fcluster

*Cluster features***Description**

Cluster features

**Usage**

```
fcluster(
  object,
  distmat = NULL,
  method = "cmeans",
  k = 2:10,
  verbose = TRUE,
  plot = TRUE,
  label = if ("gene" %in% fvars(object)) "gene" else "feature_id",
  alpha = 1,
  nrow = if (length(method) > 1) length(method) else NULL,
  ncol = NULL
)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| distmat | distance matrix      |
| method  | 'cmeans'             |
| k       | number of clusters   |
| verbose | TRUE or FALSE        |
| plot    | TRUE or FALSE        |
| label   | fvar                 |
| alpha   | fraction             |
| nrow    | number               |
| ncol    | number               |

**Value**

SummarizedExperiment  
SummarizedExperiment

**Examples**

```
object <- twofactor_sumexp()
distmat <- fdist(object)
fcluster(object) # membership-based colors
fcluster(object, distmat) # silhouette-based colors
fcluster(object, distmat, method = c('cmeans', 'hclust', 'pamk')) # more methods
```

---

fdata

*Get/Set sample/feature data*

---

**Description**

Get/Set sample/feature data

**Usage**

```
fdata(object)
```

```

fdt(object)[[pcol]] %>% p.adjust(method = 'fdr') %>% fdr2p()
```

---

filter\_exprs\_replicated\_in\_some\_subgroup

*Filter features with replicated expression in some subgroup*

---

### Description

Filter features with replicated expression in some subgroup

**Usage**

```
filter_exprs_replicated_in_some_subgroup(
  object,
  subgroupvar = "subgroup",
  assay = assayNames(object)[1],
  comparator = if (contains_ratios(object)) "!=" else ">",
  lod = 0,
  nsample = 2,
  nsubgroup = 1,
  verbose = TRUE
)
```

**Arguments**

|             |                            |
|-------------|----------------------------|
| object      | SummarizedExperiment       |
| subgroupvar | subgroup svar              |
| assay       | string                     |
| comparator  | '>' or '!='                |
| lod         | number: limit of detection |
| nsample     | number                     |
| nsubgroup   | number                     |
| verbose     | TRUE or FALSE              |

**Value**

Filtered SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% filter_exprs_replicated_in_some_subgroup()
filter_exprs_replicated_in_some_subgroup(object, character(0))
filter_exprs_replicated_in_some_subgroup(object, NULL)
```

---

|                 |                                     |
|-----------------|-------------------------------------|
| filter_features | <i>Filter features on condition</i> |
|-----------------|-------------------------------------|

---

**Description**

Filter features on condition

**Usage**

```
filter_features(object, condition, verbose = TRUE)
```

**Arguments**

|           |                      |
|-----------|----------------------|
| object    | SummarizedExperiment |
| condition | filter condition     |
| verbose   | logical              |

**Value**

filtered eSet

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
filter_features(object, SUPER_PATHWAY == 'Lipid')
```

---

|               |                             |
|---------------|-----------------------------|
| filter_medoid | <i>Filter medoid sample</i> |
|---------------|-----------------------------|

---

**Description**

Filter medoid sample

**Usage**

```
filter_medoid(object, by = NULL, verbose = FALSE)
```

**Arguments**

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| by      | svar                 |
| verbose | whether to message   |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.rnaseq_counts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file, plot = FALSE)
object %<>% filter_medoid(by = 'subgroup', verbose=TRUE)
```

---

|                |                                    |
|----------------|------------------------------------|
| filter_samples | <i>Filter samples on condition</i> |
|----------------|------------------------------------|

---

**Description**

Filter samples on condition

**Usage**

```
filter_samples(object, condition, verbose = TRUE, record = TRUE)
```

**Arguments**

|           |                      |
|-----------|----------------------|
| object    | SummarizedExperiment |
| condition | filter condition     |
| verbose   | TRUE/FALSE           |
| record    | TRUE/FALSE           |

**Value**

filtered SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
filter_samples(object, subgroup != 't0', verbose = TRUE)
```

---

fitcoefs

*fitcoefs*

---

**Description**

fitcoefs

**Usage**

```
fitcoefs(object)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
|--------|----------------------|

**Value**

string vector

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
fitcoefs(object)
fitcoefs(fit_limma(object))
```

*fits**Get fit models*

---

**Description**

Get fit models

**Usage**

```
fits(object, ...)
```

```
## S3 method for class 'data.table'
```

```
fits(object, ...)
```

```
## S3 method for class 'SummarizedExperiment'
```

```
fits(object, ...)
```

**Arguments**

object            SummarizedExperiment or data.table

...                S3 dispatch

**Value**

character vector

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma')
fits(object)
```

---

*FITSEP**Fit results separator*

---

**Description**

Fit results separator

**Usage**

```
FITSEP
```

```
PPATTERN
```

**Format**

An object of class character of length 1.

An object of class character of length 1.

**Examples**

FITSEP

fit\_linmod

*Fit General Linear Model***Description**

Fit General Linear Model

|-----------------|--------------------------------|
| genome_to_orgdb | <i>Get corresponding orgdb</i> |
|-----------------|--------------------------------|

---

**Description**

Get corresponding orgdb

**Usage**

```
genome_to_orgdb(genome)
```

**Arguments**

genome            'hg38', 'hg19', 'mm10', or 'mm9'

**Value**

OrgDb

**Examples**

```
if (requireNamespace('org.Hs.eg.db', quiet = TRUE)){
  class(genome_to_orgdb('hg38'))
}
```

---

|                |                       |
|----------------|-----------------------|
| group_by_level | <i>group by level</i> |
|----------------|-----------------------|

---

**Description**

group by level

**Usage**

```
group_by_level(x, ...)

## S3 method for class 'character'
group_by_level(x, ...)

## S3 method for class 'factor'
group_by_level(x, ...)

## S3 method for class 'data.table'
group_by_level(x, var, idvar, ...)
```

**Arguments**

|       |                                |
|-------|--------------------------------|
| x     | named logical/character/factor |
| ...   | S3 dispatch                    |
| var   | string                         |
| idvar | string                         |

**Value**

unnamed character

**Examples**

```
t1 <- c( KLF5 = 'up', F11 = 'up', RIG = 'flat', ABT1 = 'down')
dt <- data.table( gene = c( 'KL5', 'F11', 'RIG', 'ABT1' ),
                 t1 = c( 'up', 'up', 'flat', 'down' ) )
group_by_level(t1) # character
group_by_level(factor(t1)) # factor
group_by_level(dt, 't1', 'gene') # data.table
```

---

guess\_compounddiscoverer\_quantity

*Guess compound discoverer quantity from snames*

---

**Description**

Guess compound discoverer quantity from snames

**Usage**

```
guess_compounddiscoverer_quantity(x)
```

**Arguments**

|   |                  |
|---|------------------|
| x | character vector |
|---|------------------|

**Value**

string: value from names(COMPOUNDDISCOVERER\_PATTERNS)

**Examples**

```
## Not run:
# file
  file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
  guess_compounddiscoverer_quantity(file)

## End(Not run)

# character vector
x <- "Area: 20230908_F143_HILICNEG.raw (F11)"
guess_compounddiscoverer_quantity(x)

x <- "Norm. Area: 20230908_F143_HILICNEG.raw (F11)"
guess_compounddiscoverer_quantity(x)
```

---

guess\_fitsep

*guess\_fitsep*

---

**Description**

guess\_fitsep

**Usage**

```
guess_fitsep(object, ...)
```

## S3 method for class 'data.table'

```
guess_fitsep(object, ...)
```

## S3 method for class 'SummarizedExperiment'

```
guess_fitsep(object, ...)
```

**Arguments**

|        |                                    |
|--------|------------------------------------|
| object | data.table or SummarizedExperiment |
| ...    | S3 dispatch                        |

**Value**

string

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% fit_limma()
guess_fitsep(object)
```

---

guess\_maxquant\_quantity

*Guess maxquant quantity from snames*

---

## Description

Guess maxquant quantity from snames

## Usage

```
guess_maxquant_quantity(x)
```

## Arguments

x                    character vector

## Value

string: value from names(MAXQUANT\_PATTERNS)

## Examples

```
# file
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
guess_maxquant_quantity(file)

# character vector
x <- "Ratio M/L normalized STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)

x <- "Ratio M/L STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)

x <- "LFQ intensity E00.R1"
guess_maxquant_quantity(x)

x <- "Reporter intensity corrected 0 STD(0)E00(1)E01(2)_R1"
guess_maxquant_quantity(x)

x <- "Reporter intensity 0 STD(0)E00(1)E01(2)_R1"
guess_maxquant_quantity(x)

x <- "Intensity H STD(L)_E00(M)_E01(H)_R1"
guess_maxquant_quantity(x)
```

---

|           |                        |
|-----------|------------------------|
| guess_sep | <i>Guess separator</i> |
|-----------|------------------------|

---

## Description

Guess separator

## Usage

```
guess_sep(x, ...)  
  
## S3 method for class 'numeric'  
guess_sep(x, ...)  
  
## S3 method for class 'character'  
guess_sep(x, separators = c(".", "_"), verbose = FALSE, ...)  
  
## S3 method for class 'factor'  
guess_sep(x, ...)  
  
## S3 method for class 'SummarizedExperiment'  
guess_sep(x, var = "sample_id", separators = c(".", "_"), verbose = FALSE, ...)
```

## Arguments

|            |   |
|------------|---|
| x          | character vector or SummarizedExperiment          |
| ...        | used for proper S3 method dispatch                |
| separators | character vector: possible separators to look for |
| verbose    | TRUE or FALSE                                     |
| var        | svar or fvar                                      |

## Value

separator (string) or NULL (if no separator could be identified)

## Examples

```
# charactervector  
guess_sep(c('PERM_NON.R1[H/L]', 'PERM_NON.R2[H/L]'))  
guess_sep(c('WT_untreated_1', 'WT_untreated_2'))  
guess_sep(c('group1', 'group2.R1'))  
# SummarizedExperiment  
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
guess_sep(object)
```

---

has\_multiple\_levels    *Variable has multiple levels?*

---

### Description

Variable has multiple levels?

### Usage

```
has_multiple_levels(x, ...)  
  
## S3 method for class 'character'  
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)  
  
## S3 method for class 'factor'  
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)  
  
## S3 method for class 'numeric'  
has_multiple_levels(x, .xname = get_name_in_parent(x), ...)  
  
## S3 method for class 'data.table'  
has_multiple_levels(  
  x,  
  y,  
  .xname = get_name_in_parent(x),  
  .yname = get_name_in_parent(y),  
  ...  
)  
  
## S3 method for class 'SummarizedExperiment'  
has_multiple_levels(  
  x,  
  y,  
  .xname = get_name_in_parent(x),  
  .yname = get_name_in_parent(y),  
  ...  
)
```

### Arguments

|        |  |
|--------|--|
| x      | vector, data.table or SummarizedExperiment |
| ...    | required for s3 dispatch                   |
| .xname | string                                     |
| y      | string                                     |
| .yname | string                                     |

### Value

TRUE or false

**Examples**

```

# numeric
a <- numeric();           has_multiple_levels(a)
a <- c(1, 1);             has_multiple_levels(a)
a <- c(1, 2);             has_multiple_levels(a)
# character
a <- character();         has_multiple_levels(a)
a <- c('A', 'A');         has_multiple_levels(a)
a <- c('A', 'B');         has_multiple_levels(a)
# factor
a <- factor();            has_multiple_levels(a)
a <- factor(c('A', 'A')); has_multiple_levels(a)
a <- factor(c('A', 'B')); has_multiple_levels(a)
# data.table
dt <- data.table(a = factor());           has_multiple_levels(dt, 'b')

dt <- data.table(a = factor());           has_multiple_levels(dt, 'a')
dt <- data.table(a = factor(c('A', 'A'))); has_multiple_levels(dt, 'a')
dt <- data.table(a = factor(c('A', 'B'))); has_multiple_levels(dt, 'a')
# sumexp
object <- matrix(1:9, nrow = 3)
rownames(object) <- sprintf('%d', 1:3)
colnames(object) <- sprintf('%d', 1:3)
object <- list(exprs = object)
object %<>% SummarizedExperiment::SummarizedExperiment()
object$subgroup <- c('A', 'A', 'A');       has_multiple_levels(object, 'group')
object$subgroup <- c('A', 'A', 'A');       has_multiple_levels(object, 'subgroup')
object$subgroup <- c('A', 'B', 'A');       has_multiple_levels(object, 'subgroup')

```

hdlproteins

*hdl proteomewatch proteins***Description**

hdl proteomewatch proteins

**Usage**

hdlproteins()

**Value**

string vector: HDLProteomeWatch protein entries

**Examples**

hdlproteins()

---

 impute

*Impute*

---

### Description

Impute NA values

### Usage

```
impute(object, ...)
```

```
## S3 method for class 'numeric'
```

```
impute(object, shift = 2.5, width = 0.3, verbose = TRUE, plot = FALSE, ...)
```

```
## S3 method for class 'matrix'
```

```
impute(
  object,
  shift = 2.5,
  width = 0.3,
  verbose = TRUE,
  plot = FALSE,
  n = min(9, ncol(object)),
  palette = make_colors(colnames(object)),
  ...
)
```

```
## S3 method for class 'SummarizedExperiment'
```

```
impute(
  object,
  assay = assayNames(object)[1],
  by = "subgroup",
  shift = 2.5,
  width = 0.3,
  frac = 0.5,
  verbose = TRUE,
  plot = FALSE,
  palette = make_colors(colnames(object)),
  n = min(9, ncol(object)),
  ...
)
```

### Arguments

|         |                          |
|---------|--------------------------|
| object  | numeric vector, SumExp   |
| ...     | required for s3 dispatch |
| shift   | number: sd units         |
| width   | number: sd units         |
| verbose | TRUE or FALSE            |
| plot    | TRUE or FALSE            |

|         |   |
|---------|---|
| n       | number of samples to plot   |
| palette | color vector  |
| assay   | string  |
| by      | svar  |
| frac    | fraction: fraction of available samples should be greater than this value for a subgroup to be called available |

### Details

Imputes NA values from  $N(\text{mean} - 2.5 \text{ sd}, 0.3 \text{ sd})$

### Value

numeric vector, matrix or SumExp

### Examples

```
# Simple Design
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
impute(values(object)[, 1], plot = TRUE)[1:3]           # vector
impute(values(object), plot = TRUE)[1:3, 1:3]         # matrix
impute(object, plot = TRUE)                           # sumexp

# Complex Design
subgroups <- sprintf('%s_STD', c('E00','E01','E02','E05','E15','E30','M00'))
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, subgroups = subgroups)
impute(values(object)[1:3, 1 ])                       # vector
impute(values(object)[1:3, 1:5 ])                     # matrix
impute( object )                                     # sumexp
```

---

|                  |                         |
|------------------|-------------------------|
| invert_subgroups | <i>Invert subgroups</i> |
|------------------|-------------------------|

---

### Description

Invert expressions , subgroups, and sample ids

### Usage

```
invert_subgroups(
  object,
  subgroups = slevels(object, "subgroup"),
  sep = guess_sep(object, "subgroup")
)
```

### Arguments

|           |  |
|-----------|--|
| object    | SummarizedExperiment                             |
| subgroups | character vector: subgroup levels to be inverted |
| sep       | string: collapsed string separator               |

**Value**

character vector or SummarizedExperiment

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
invert_subgroups(object)
```

---

is\_collapsed\_subset    *Is collapsed subset*

---

**Description**

Is collapsed subset

**Usage**

```
is_collapsed_subset(x, y, sep = ";")
```

**Arguments**

|     |                  |
|-----|------------------|
| x   | character vector |
| y   | character vector |
| sep | string           |

**Value**

character vector

**Examples**

```
x <- c('H3BNX8;H3BRM5', 'G5E9Y3')
y <- c('P20674;H3BNX8;H3BV69;H3BRM5', 'G5E9Y3;Q8WWN8;B4DIT1')
is_collapsed_subset(x, y)
```

---

is\_correlation\_matrix    *Assert correlation matrix*

---

**Description**

Assert correlation matrix

**Usage**

```
is_correlation_matrix(
  x,
  .xname = get_name_in_parent(x),
  severity = getOption("assertive.severity", "stop")
)

assert_correlation_matrix(x, .xname = get_name_in_parent(x))
```

**Arguments**

|          |                     |
|----------|---------------------|
| x        | correlation matrix  |
| .xname   | string              |
| severity | 'warning' or 'stop' |

**Value**

TRUE or false

**Examples**

```
x <- matrix(c(1,0.7, 0.3, 1), nrow = 2)
rownames(x) <- c('gene1', 'gene2')
colnames(x) <- c('gene1', 'gene2')
is_correlation_matrix(x)
is_correlation_matrix({x[1,1] <- -2; x})
```

---

|                 |  |
|-----------------|--|
| is_diann_report | <i>Is diann, fragpipe, proteingroups, phosphosites file?</i> |
|-----------------|--|

---

**Description**

Is diann, fragpipe, proteingroups, phosphosites file?

**Usage**

```
is_diann_report(x, .xname = get_name_in_parent(x))
is_fragpipe_tsv(x, .xname = get_name_in_parent(x))
is_maxquant_proteingroups(x, .xname = get_name_in_parent(x))
is_maxquant_phosphosites(x, .xname = get_name_in_parent(x))
is_compounddiscoverer_output(x, .xname = get_name_in_parent(x))
assert_diann_report(x, .xname = get_name_in_parent(x))
assert_fragpipe_tsv(x, .xname = get_name_in_parent(x))
assert_maxquant_proteingroups(x, .xname = get_name_in_parent(x))
assert_maxquant_phosphosites(x, .xname = get_name_in_parent(x))
assert_compounddiscoverer_output(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |           |
|--------|-----------|
| x      | file      |
| .xname | name of x |

**Examples**

```

file <- NULL
is_diann_report(file)
is_fragpipe_tsv(file)
is_maxquant_proteingroups(file)
is_maxquant_phosphosites(file)

file <- 3
is_diann_report(file)
is_fragpipe_tsv(file)
is_maxquant_proteingroups(file)
is_maxquant_phosphosites(file)

file <- 'blabla.tsv'
is_diann_report(file)
is_fragpipe_tsv(file)
is_maxquant_proteingroups(file)
is_maxquant_phosphosites(file)

file <- download_data('multiorganism.combined.protein.tsv')

is_fragpipe_tsv(file)
is_maxquant_proteingroups(file)
is_maxquant_phosphosites(file)

file <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
is_diann_report(file)
is_fragpipe_tsv(file)
is_maxquant_proteingroups(file)
is_maxquant_phosphosites(file)

```

---

is\_fastadt

*Is fastadt*

---

**Description**

Is fastadt

**Usage**

is\_fastadt(x, .xname = get\_name\_in\_parent(x))

assert\_fastadt(x, .xname = get\_name\_in\_parent(x))

**Arguments**

|        |                  |
|--------|------------------|
| x      | fasta data.table |
| .xname | string           |

**Examples**

```
fastafile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
x <- read_uniprotDT(fastafile)
# is_fastadt(x) # slow
```

---

|         |                   |
|---------|-------------------|
| is_file | <i>Is a file?</i> |
|---------|-------------------|

---

**Description**

Is a file (and not a dir)

**Usage**

```
is_file(file)
```

**Arguments**

|      |          |
|------|----------|
| file | filepath |
|------|----------|

**Details**

This function distinguishes between dir and file. Others dont: is.file, fs::file\_exists, assertive::is\_existing\_file

**Examples**

```
dir <- tempdir(); dir.create(dir, showWarnings = FALSE)
file <- tempfile(); invisible(file.create(file))
is_file(dir)
is_file(file)
```

---

|             |                    |
|-------------|--------------------|
| is_fraction | <i>Is fraction</i> |
|-------------|--------------------|

---

**Description**

Is fraction

**Usage**

```
is_fraction(x, .xname = get_name_in_parent(x))

assert_is_fraction(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |        |
|--------|--------|
| x      | number |
| .xname | string |

**Value**

TRUE or false

**Examples**

```
is_fraction(0.1)      # YES
is_fraction(1)       # YES
is_fraction(1.2)     # NO - more than 1
is_fraction(c(0.1, 0.2)) # NO - vector
```

---

|            |                           |
|------------|---------------------------|
| is_imputed | <i>Get/set is_imputed</i> |
|------------|---------------------------|

---

**Description**

Get/Set is\_imputed

**Usage**

```
is_imputed(object)

## S4 method for signature 'SummarizedExperiment'
is_imputed(object)

is_imputed(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
is_imputed(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
is_imputed(object) <- value
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| value  | matrix               |

**Value**

matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, impute = TRUE)
sum(is_imputed(object))
```

---

|                    |                           |
|--------------------|---------------------------|
| is_positive_number | <i>Is positive number</i> |
|--------------------|---------------------------|

---

**Description**

Is positive number

**Usage**

```
is_positive_number(x, .xname = get_name_in_parent(x))
assert_positive_number(x, .xname = get_name_in_parent(x))
is_weakly_positive_number(x, .xname = get_name_in_parent(x))
assert_weakly_positive_number(x, .xname = get_name_in_parent(x))
```

**Arguments**

|        |           |
|--------|-----------|
| x      | number    |
| .xname | name of x |

**Value**

TRUE or false

**Examples**

```
is_positive_number( 3)
is_positive_number(-3)
is_positive_number( 0)
is_weakly_positive_number(0)
assert_positive_number(3)
```

---

|                  |                         |
|------------------|-------------------------|
| is_scalar_subset | <i>Is scalar subset</i> |
|------------------|-------------------------|

---

**Description**

Is scalar subset

**Usage**

```
is_scalar_subset(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)
```

```

assert_scalar_subset(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)

```

### Arguments

|        |                      |
|--------|----------------------|
| x      | scalar               |
| y      | SummarizedExperiment |
| .xname | name of x            |
| .yname | name of y            |

### Examples

```

file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
is_scalar_subset('subgroup', svars(object))
is_scalar_subset('subject', svars(object))
assert_scalar_subset('subgroup', svars(object))

```

---

|        |                        |
|--------|------------------------|
| is_sig | <i>Is significant?</i> |
|--------|------------------------|

---

### Description

Is significant?

### Usage

```

is_sig(
  object,
  fit = fits(object)[1],
  contrast = coefs(object),
  quantity = "fdr"
)

```

### Arguments

|          |   |
|----------|---|
| object   | SummarizedExperiment                          |
| fit      | subset of autonomics::TESTS                   |
| contrast | subset of colnames(metadata(object)[[fit]])   |
| quantity | value in dimnames(metadata(object)[[fit]])[3] |

### Value

matrix: -1 (downregulated), +1 (upregulatd), 0 (not fdr significant)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
object %<>% fit_lm()
object %<>% fit_limma()
issig <- is_sig(object, fit = c('lm','limma'), contrast = 'Adult-X30dpt')
plot_contrast_venn(issig)
```

---

|                  |                         |
|------------------|-------------------------|
| is_valid_formula | <i>Is valid formula</i> |
|------------------|-------------------------|

---

**Description**

Is valid formula

**Usage**

```
is_valid_formula(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)

assert_valid_formula(
  x,
  y,
  .xname = get_name_in_parent(x),
  .yname = get_name_in_parent(y)
)
```

**Arguments**

|        |                      |
|--------|----------------------|
| x      | formula              |
| y      | SummarizedExperiment |
| .xname | string               |
| .yname | string               |

**Value**

TRUE or false

**Examples**

```
object <- matrix(1:9, nrow = 3)
rownames(object) <- sprintf('f%d', 1:3)
colnames(object) <- sprintf('s%d', 1:3)
object <- list(exprs = object)
object %<>% SummarizedExperiment::SummarizedExperiment()
object$group <- 'group0'
object$subgroup <- c('A', 'B', 'C')
```

```

svars(object)
  is_valid_formula( 'condition', object) # not formula
  is_valid_formula( ~condition, object) # not svar
  is_valid_formula( ~group, object) # not multilevel
  is_valid_formula( ~subgroup, object) # TRUE
  is_valid_formula( ~0+subgroup, object) # TRUE
  is_valid_formula( ~1, object) # TRUE
assert_valid_formula( ~subgroup, object)

```

---

keep\_connected\_blocks *Keep fully connected blocks*

---

### Description

Keep fully connected blocks

### Usage

```
keep_connected_blocks(object, block, verbose = TRUE)
```

### Arguments

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| block   | svar                 |
| verbose | TRUE or FALSE        |

### Examples

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% keep_connected_blocks( block = 'Subject')

```

---

keep\_connected\_features

*Keep features with n+ connected blocks*

---

### Description

Keep features with n+ connected blocks

### Usage

```
keep_connected_features(object, block, n = 2, verbose = TRUE)
```

### Arguments

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| block   | svar                 |
| n       | number               |
| verbose | TRUE or FALSE        |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% keep_connected_blocks( block = 'Subject')
object %<>% keep_connected_features(block = 'Subject')
```

---

```
keep_replicated_features
      Keep replicated features
```

---

**Description**

Keep features replicated for each slevel

**Usage**

```
keep_replicated_features(object, formula = ~1, n = 3, verbose = TRUE)
```

**Arguments**

|         |                           |
|---------|---------------------------|
| object  | SummarizedExperiment      |
| formula | formula                   |
| n       | min replications required |
| verbose | TRUE or FALSE             |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% keep_replicated_features()
object %<>% keep_replicated_features(~ subgroup)
```

---

```
label2index      Convert labels into indices
```

---

**Description**

Convert labels into indices

**Usage**

```
label2index(x)
```

**Arguments**

|   |             |
|---|-------------|
| x | 'character' |
|---|-------------|

**Examples**

```
label2index(x = 'Reporter intensity 0 WT(0).KD(1).OE(2).R1')
label2index(x = 'Reporter intensity 1 WT(1).KD(2).OE(3).R1')
label2index(x = 'Reporter intensity 0 WT(126).KD(127).OE(128).R1')
label2index(x = 'Reporter intensity 1 WT(126).KD(127).OE(128).R1')
label2index(x = 'Reporter intensity 1 Mix1')
```

---

 LINMODEGINES

*Linear Modeling Engines*

---

**Description**

Linear Modeling Engines

**Usage**

```
LINMODEGINES
```

**Format**

An object of class character of length 5.

**Examples**

```
LINMODEGINES
```

---

 list2mat

*list to matrix*

---

**Description**

list to matrix

**Usage**

```
list2mat(x)
```

**Arguments**

x                    list

**Value**

matrix

**Examples**

```
x <- list(roundfruit = c('apple', 'orange'), redfruit = c('apple', 'strawberry'))
list2mat(x)
```

---

|            |                   |
|------------|-------------------|
| list_files | <i>list_files</i> |
|------------|-------------------|

---

**Description**

list.files for programming

**Usage**

```
list_files(dir, full.names)
```

**Arguments**

|            |               |
|------------|---------------|
| dir        | directory     |
| full.names | TRUE or FALSE |

**Details**

Adds a small layer on list.files. Returning NULL rather than character(0) when no files. Making it better suited for programming.

---

|            |                           |
|------------|---------------------------|
| log2counts | <i>Get/Set log2counts</i> |
|------------|---------------------------|

---

**Description**

Get / Set log2counts matrix

**Usage**

```
log2counts(object)

## S4 method for signature 'SummarizedExperiment'
log2counts(object)

log2counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2counts(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2counts(object) <- value
```

**Arguments**

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | log2count matrix (features x samples) |

**Value**

log2count matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2counts(object)[1:3, 1:3]
log2counts(object) <- values(object)
```

---

log2cpm

*Get/Set log2cpm*

---

**Description**

Get / Set log2cpm matrix

**Usage**

```
log2cpm(object)

## S4 method for signature 'SummarizedExperiment'
log2cpm(object)

log2cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2cpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2cpm(object) <- value
```

**Arguments**

|        |                                     |
|--------|-------------------------------------|
| object | SummarizedExperiment                |
| value  | log2cpm matrix (features x samples) |

**Value**

log2cpm matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2cpm(object)[1:3, 1:3]
log2cpm(object) <- values(object)
```

---

|           |                          |
|-----------|--------------------------|
| log2diffs | <i>Get/Set log2diffs</i> |
|-----------|--------------------------|

---

**Description**

Get/Set log2diffs

**Usage**

```
log2diffs(object)

## S4 method for signature 'SummarizedExperiment'
log2diffs(object)

log2diffs(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2diffs(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2diffs(object) <- value
```

**Arguments**

|        |                                       |
|--------|---------------------------------------|
| object | SummarizedExperiment                  |
| value  | occupancy matrix (features x samples) |

**Value**

occupancy matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2diffs(object)[1:3, 1:3]
```

---

|              |                             |
|--------------|-----------------------------|
| log2proteins | <i>Get/Set log2proteins</i> |
|--------------|-----------------------------|

---

**Description**

Get/Set log2proteins

**Usage**

```
log2proteins(object)

## S4 method for signature 'SummarizedExperiment'
log2proteins(object)

log2proteins(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2proteins(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2proteins(object) <- value
```

**Arguments**

```
object      SummarizedExperiment
value       occupancy matrix (features x samples)
```

**Value**

occupancy matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2proteins(object)[1:3, 1:3]
```

---

log2sites

*Get/Set log2sites*

---

**Description**

Get/Set log2sites

**Usage**

```
log2sites(object)

## S4 method for signature 'SummarizedExperiment'
log2sites(object)

log2sites(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2sites(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2sites(object) <- value
```

**Arguments**

object            SummarizedExperiment  
value            occupancy matrix (features x samples)

**Value**

occupancy matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
log2sites(object)[1:3, 1:3]
```

---

|         |                        |
|---------|------------------------|
| log2tpm | <i>Get/Set log2tpm</i> |
|---------|------------------------|

---

**Description**

Get / Set log2tpm matrix

**Usage**

```
log2tpm(object)

## S4 method for signature 'SummarizedExperiment'
log2tpm(object)

log2tpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
log2tpm(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
log2tpm(object) <- value
```

**Arguments**

object            SummarizedExperiment  
value            log2tpm matrix (features x samples)

**Value**

log2tpm matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
log2tpm(object) <- values(object)
log2tpm(object)[1:3, 1:3]
```

```

object                %>% plot_sample_densities()
quantnorm(object)    %>% plot_sample_densities()

object                %>% plot_sample_densities()
#vsn(object)          %>% plot_sample_densities() # dataset too small

object                %>% plot_sample_densities()
zscore(object)        %>% plot_sample_densities()

object                %>% plot_sample_densities()
exp2(object)          %>% plot_sample_densities()
log2transform(exp2(object)) %>% plot_sample_densities()

```

---

logical2factor      *logical to factor*

---

## Description

logical to factor

## Usage

```

logical2factor(x, true = get_name_in_parent(x), false = paste0("not", true))

factor2logical(x)

```

## Arguments

|       |                     |
|-------|---------------------|
| x     | logical vector      |
| true  | string : truelevel  |
| false | string : falselevel |

## Value

factor

## Examples

```

t1up <- c( TRUE,  FALSE,  TRUE)
t1   <- c('flat', 'down', 'up' ) %>% factor(., .)
t1up

factor2logical(t1)

```

---

make\_alpha\_palette      *Make alpha palette*

---

**Description**

Make alpha palette

**Usage**

```
make_alpha_palette(object, alpha)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| alpha  | string               |

**Value**

character vector

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
make_alpha_palette(object, 'Time')
```

---

make\_colors              *Make colors*

---

**Description**

Make colors

**Usage**

```
make_colors(
  varlevels,
  sep = guess_sep(varlevels),
  show = FALSE,
  verbose = FALSE
)
```

**Arguments**

|           |                                |
|-----------|--------------------------------|
| varlevels | character vector               |
| sep       | string                         |
| show      | TRUE or FALSE: whether to plot |
| verbose   | TRUE or FALSE: whether to msg  |

## Examples

```
make_colors(c('A', 'B', 'C', 'D' ), show = TRUE)
make_colors(c('A.1', 'B.1', 'A.2', 'B.2'), show = TRUE)
```

---

|                 |                                 |
|-----------------|---------------------------------|
| make_volcano_dt | <i>Create volcano datatable</i> |
|-----------------|---------------------------------|

---

## Description

Create volcano datatable

## Usage

```
make_volcano_dt(
  object,
  fit = fits(object)[1],
  coefs = coefs(object, fit = fit)[1],
  shape = "imputed",
  size = NULL,
  alpha = NULL,
  label = "feature_id"
)
```

## Arguments

|        |   |
|--------|---|
| object | SummarizedExperiment                                |
| fit    | 'limma', 'lme', 'lm', 'wilcoxon'                    |
| coefs  | character vector: coefs for which to plot volcanoes |
| shape  | fvar or NULL  |
| size   | fvar or NULL  |
| alpha  | fvar or NULL  |
| label  | fvar or NULL  |

## Value

data.table

## Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, impute = TRUE, fit = 'limma')
make_volcano_dt(object, fit = 'limma', coefs = 'Adult-X30dpt')
```

---

|             |                    |
|-------------|--------------------|
| map_fvalues | <i>Map fvalues</i> |
|-------------|--------------------|

---

**Description**

Map fvalues

**Usage**

```
map_fvalues(object, fvalues, from = "uniprot", to = "feature_id", sep = ";")
```

**Arguments**

|         |                           |
|---------|---------------------------|
| object  | SummarizedExperiment      |
| fvalues | uncollapsed string vector |
| from    | string (fvar)             |
| to      | string (svar)             |
| sep     | collapse separator        |

**Value**

string vector

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
fdt(object)
map_fvalues(object, c('Q6DHL5', 'Q6PFS7'), from = 'uniprot', to = 'feature_id', sep = ';')
```

---

|               |   |
|---------------|---|
| matrix2sumexp | <i>Convert matrix into SummarizedExperiment</i> |
|---------------|---|

---

**Description**

Convert matrix into SummarizedExperiment

**Usage**

```
matrix2sumexp(x, verbose = TRUE)
```

**Arguments**

|         |            |
|---------|------------|
| x       | matrix     |
| verbose | TRUE/FALSE |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
x <- values(read_metabolon(file))
object <- matrix2sumexp(x)
object %<>% pca()
biplot(object, color = 'subgroup')
```

---

|                   |                                   |
|-------------------|-----------------------------------|
| MAXQUANT_PATTERNS | <i>maxquant quantity patterns</i> |
|-------------------|-----------------------------------|

---

**Description**

maxquant quantity patterns

**Usage**

MAXQUANT\_PATTERNS

**Format**

An object of class character of length 7.

**Examples**

MAXQUANT\_PATTERNS

---

|         |                                       |
|---------|---------------------------------------|
| mdsplot | <i>Feature correlations/distances</i> |
|---------|---------------------------------------|

---

**Description**

Feature correlations/distances

**Usage**

mdsplot(distmat, title = NULL)

fcor(object, verbose = TRUE)

scor(object, verbose = TRUE)

fdist(object, method = "cor")

sdist(object, method = "cor")

**Arguments**

|         |                         |
|---------|-------------------------|
| distmat | distance matrix         |
| title   | NULL or string          |
| object  | SummarizedExperiment    |
| verbose | TRUE or FALSE           |
| method  | 'cor', 'euclidian', etc |

**Value**

matrix

**Examples**

```
# Correlations
object <- twofactor_sumexp()
scor(object)      %>% pheatmap::pheatmap()
fcor(object)      %>% pheatmap::pheatmap()
# Distances
sdist(object, 'cor')      %>% mdsplot('samples: cor')
sdist(object, 'euclidian') %>% mdsplot('samples: euclidian')
fdist(object, 'cor')      %>% mdsplot('features: cor')
fdist(object, 'euclidian') %>% mdsplot('features: euclidian')
```

---

merge\_compounddiscoverer

*merge compound discoverer files*

---

**Description**

merge compound discoverer files

**Usage**

```
merge_compounddiscoverer(x, quantity = NULL, verbose = TRUE)
```

**Arguments**

|          |                          |
|----------|--------------------------|
| x        | 'list'                   |
| quantity | 'area', 'normalizedarea' |
| verbose  | 'TRUE' or 'FALSE'        |

**Value**

'data.table'

---

|                    |                           |
|--------------------|---------------------------|
| merge_sample_excel | <i>Merge sample excel</i> |
|--------------------|---------------------------|

---

**Description**

Merge sample excel

**Usage**

```
merge_sample_excel(  
  object,  
  sfile,  
  range = NULL,  
  by.x = "sample_id",  
  by.y = "sample_id"  
)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| sfile  | sample file          |
| range  | string               |
| by.x   | string               |
| by.y   | string               |

**Value**

SummarizedExperiment

---

|                   |                                    |
|-------------------|------------------------------------|
| merge_sample_file | <i>Merge sample / feature file</i> |
|-------------------|------------------------------------|

---

**Description**

Merge sample / feature file

**Usage**

```
merge_sample_file(  
  object,  
  sfile = NULL,  
  by.x = "sample_id",  
  by.y = "sample_id",  
  all.x = TRUE,  
  select = NULL,  
  stringsAsFactors = FALSE,  
  verbose = TRUE  
)
```

```
merge_ffile(
  object,
  ffile = NULL,
  by.x = "feature_id",
  by.y = "feature_id",
  all.x = TRUE,
  select = NULL,
  stringsAsFactors = FALSE,
  verbose = TRUE
)
```

### Arguments

|                  |   |
|------------------|---|
| object           | SummarizedExperiment  |
| sfile            | string : sample file path   |
| by.x             | string : object mergevar  |
| by.y             | string : file mergevvar   |
| all.x            | TRUE / FALSE : whether to keep samples / feature without annotation |
| select           | character : [sf]file columns to select                              |
| stringsAsFactors | TRUE / FALSE  |
| verbose          | TRUE / FALSE  |
| ffile            | string : ffile path   |

### Value

SummarizedExperiment

### Examples

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
subgroups <- c('E00','E01', 'E02','E05','E15','E30', 'M00')
subgroups %<>% paste0('_STD')
object <- read_maxquant_proteingroups(file, subgroups = subgroups)
sfile <- paste0(tempdir(), '/', basename(tools::file_path_sans_ext(file)))
sfile %<>% paste0('.samples.txt')
dt <- data.table(sample_id = object$sample_id,
                 day = split_extract_fixed(object$subgroup, '_', 1))
data.table::fwrite(dt, sfile)
sdt(object)
sdt(merge_sample_file(object, sfile))
```

---

merge\_sdata

*Merge sample/feature dt*

---

### Description

Merge sample/feature dt

**Usage**

```
merge_sdata(  
  object,  
  dt,  
  by.x = "sample_id",  
  by.y = names(dt)[1],  
  all.x = TRUE,  
  verbose = TRUE  
)
```

```
merge_sdt(  
  object,  
  dt,  
  by.x = "sample_id",  
  by.y = "sample_id",  
  all.x = TRUE,  
  verbose = TRUE  
)
```

```
merge_fdata(  
  object,  
  dt,  
  by.x = "feature_id",  
  by.y = names(dt)[1],  
  all.x = TRUE,  
  verbose = TRUE  
)
```

```
merge_fdt(  
  object,  
  dt,  
  by.x = "feature_id",  
  by.y = "feature_id",  
  all.x = TRUE,  
  verbose = TRUE  
)
```

**Arguments**

|         |  |
|---------|--|
| object  | SummarizedExperiment   |
| dt      | data.frame, data.table, DataFrame                                    |
| by.x    | string : object mergevar   |
| by.y    | string : df mergevar   |
| all.x   | TRUE / FALSE : whether to keep samples / features without annotation |
| verbose | TRUE / FALSE : whether to msg  |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
sdt(object)
sdt(merge_sdt(object, data.table(sample_id = object$sample_id,
                                number = seq_along(object$sample_id))))
```

---

|            |                          |
|------------|--------------------------|
| message_df | <i>message dataframe</i> |
|------------|--------------------------|

---

**Description**

message dataframe using sprintf syntax. Use place holder `

**Usage**

```
message_df(format_string, x)
```

**Arguments**

|               |                             |
|---------------|-----------------------------|
| format_string | sprintf style format string |
| x             | data.frame                  |

**Value**

nothing returned

**Examples**

```
x <- data.frame(feature_id = c('F001', 'F002'), symbol = c('FEAT1', 'FEAT2'))
message_df('\t%s', x)

x <- c(rep('PASS', 25), rep('FAIL', 25))
message_df(format_string = '%s', table(x))
```

---

|          |                           |
|----------|---------------------------|
| modelvar | <i>Get model variable</i> |
|----------|---------------------------|

---

**Description**

```

---

MSIGCOLLECTIONSHUMAN *Human/Mouse Msigdb Collections*

---

### **Description**

Human/Mouse Msigdb Collections

### **Usage**

MSIGCOLLECTIONSHUMAN

MSIGCOLLECTIONSMOUSE

### **Format**

An object of class character of length 25.

An object of class character of length 13.

---

MSIGDIR *local msigdb dir*

---

### **Description**

local msigdb dir

### **Usage**

MSIGDIR

### **Format**

An object of class character of length 1.

---

|          |                               |
|----------|-------------------------------|
| nfactors | <i>stri_split and extract</i> |
|----------|-------------------------------|

---

**Description**

stri\_split and extract

**Usage**

```
nfactors(x, sep = guess_sep(x))  
split_extract_fixed(x, sep, i)  
split_extract_regex(x, sep, i)  
split_extract(x, i, sep = guess_sep(x))
```

**Arguments**

|     |                  |
|-----|------------------|
| x   | character vector |
| sep | string           |
| i   | integer          |

**Value**

character vector

**Examples**

```
# Read  
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
x <- object$sample_id[1:5]  
nfactors(x)  
# Split  
split_extract_fixed(x, '.', 1:2)  
split_extract_fixed(x, '.', seq_len(nfactors(x)-1))  
split_extract_fixed(x, '.', nfactors(x))  
split_extract_fixed(fdt(object)$PUBCHEM, ';', 1) # with NA values
```

# Survival
object <- survival_example()
object %<>% fit_survival()
order_on_p(object)
```

---

pca

*PCA, SMA, LDA, PLS, SPLS, OPLS*

---

## Description

Perform a dimension reduction. Store sample scores, feature loadings, and dimension variances.

## Usage

```
pca(
  object,
  by = "sample_id",
  assay = assayNames(object)[1],
  ndim = 2,
  sep = FITSEP,
  minvar = 0,
  center_samples = TRUE,
  verbose = TRUE,
  plot = FALSE,
  ...
)

pls(
  object,
  by = "subgroup",
  assay = assayNames(object)[1],
  ndim = 2,
  sep = FITSEP,
  minvar = 0,
  verbose = FALSE,
  plot = FALSE,
  ...
)

sma(
  object,
  by = "sample_id",
  assay = assayNames(object)[1],
  ndim = 2,
```

```

    sep = FITSEP,
    minvar = 0,
    verbose = TRUE,
    plot = FALSE,
    ...
)

lda(
  object,
  assay = assayNames(object)[1],

|-----------------|---------------------------------|
| pg_to_canonical | <i>proteingroup to isoforms</i> |
|-----------------|---------------------------------|

---

**Description**

proteingroup to isoforms

**Usage**

```
pg_to_canonical(x, unique = TRUE)
```

```
pg_to_isoforms(x, unique = TRUE)
```

**Arguments**

```

x              proteingroups string vector
unique         whether to remove duplicates

```

**Value**

string vector

**Examples**

```

(x <- c('Q96JP5;Q96JP5-2', 'Q96JP5', 'Q96JP5-2;P86791'))
pg_to_isoforms(x)
pg_to_canonical(x)
pg_to_isoforms(x, unique = FALSE)
pg_to_canonical(x, unique = FALSE)
# .pg_to_isoforms(x[1]) # unexported dot functions
# .pg_to_canonical(x[1]) # operate on scalars

```

---

plot\_coef\_densities     *Plot contrast densities*

---

### Description

Plot contrast densities

### Usage

```
plot_coef_densities(
  object,
  fit = fits(object)[1],
  coefs = autonomics::coefs(object, fit = fit),
  sep = FITSEP,
  label = "feature_id"
)
```

### Arguments

|        |   |
|--------|---|
| object | SummarizedExperiment                        |
| fit    | 'limma', 'lm', 'lme', 'lmer', or 'wilcoxon' |
| coefs  | character vector                            |
| sep    | string                                      |
| label  | svar  |

### Value

ggplot

### Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma(~subgroup, block = 'Subject')
plot_coef_densities(object)
```

---

plot\_contrastogram     *Plot contrastogram*

---

### Description

Plot contrastogram

### Usage

```
plot_contrastogram(
  object,
  subgroupvar,
  formula = as.formula(paste0("~ 0 +", subgroupvar)),
  colors = make_colors(slevels(object, subgroupvar), guess_sep(object)),
  curve = 0.1
)
```

**Arguments**

|             |  |
|-------------|--|
| object      | SummarizedExperiment                   |
| subgroupvar | subgroup svar                          |
| formula     | formula                                |
| colors      | named color vector (names = subgroups) |
| curve       | arrow curvature                        |

**Value**

list returned by [plotmat](#)

**Examples**

```
if (requireNamespace('diagram', quietly = TRUE)){
  file <- download_data('halama18.metabolon.xlsx')
  object <- read_metabolon(file)
  plot_contrastogram(object, subgroupvar = 'subgroup')
}
```

---

plot\_contrast\_venn      *Plot contrast venn*

---

**Description**

Plot contrast venn

**Usage**

```
plot_contrast_venn(issig, colors = NULL)
```

**Arguments**

|        |   |
|--------|---|
| issig  | matrix(nrow, ncontrast): -1 (down), +1 (up) |
| colors | NULL or colorvector                         |

**Value**

nothing returned

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_wilcoxon(~ subgroup, block = 'Subject')
object %<>% fit_limma( ~ subgroup, block = 'Subject', codingfun = contr.treatment.explicit)
isfdr <- is_sig(object, contrast = 't3-t0', quantity = 'p', fit = fits(object))
plot_contrast_venn(isfdr)
```

---

 plot\_data

*Plot data*

---

**Description**

Plot data

**Usage**

```
plot_data(
  data,
  geom = geom_point,
  color = NULL,
  fill = NULL,
  linetype = NULL,
  ...,
  palette = NULL,
  fixed = list(),
  theme = list()
)
```

**Arguments**

|          |  |
|----------|--|
| data     | data.frame'                            |
| geom     | geom_point, etc.                       |
| color    | variable mapped to color (symbol)      |
| fill     | variable mapped to fill (symbol)       |
| linetype | variable mapped to linetype (symbol)   |
| ...      | mapped aesthetics                      |
| palette  | color palette (named character vector) |
| fixed    | fixed aesthetics (list)                |
| theme    | list with ggplot theme specifications  |

**Value**

ggplot object

**Author(s)**

Aditya Bhagwat, Johannes Graumann

**Examples**

plot\_fit\_summary

*Plot fit summary*

---

**Description**

Plot fit summary

**Usage**

```
plot_fit_summary(sumdt, nrow = NULL, ncol = NULL, order = FALSE)
```

**Arguments**

|       |               |
|-------|---------------|
| sumdt | data.table    |
| nrow  | number        |
| ncol  | number        |
| order | TRUE or FALSE |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_lm()
object %<>% fit_limma(block = 'Subject')
sumdt <- summarize_fit(object, coefs = c('t1-t0', 't2-t0', 't3-t0'))
plot_fit_summary(sumdt)
```

---

plot\_heatmap                      *Plot heatmap*

---

### Description

Plot heatmap

### Usage

```
plot_heatmap(
  object,
  fit = fits(object)[1],
  coef = autonomics::coefs(object, fit = fit)[1],
  effectsize = 0,
  p = 1,
  fdr = 0.05,
  n = 100,
  assay = assayNames(object)[1],
  cluster_features = FALSE,
  cluster_samples = FALSE,
  flabel = intersect(c("gene", "feature_id"), fvars(object))[1],
  group = "subgroup",
  verbose = TRUE,
  title = NULL
)
```

### Arguments

|                  |                                     |
|------------------|-------------------------------------|
| object           | SummarizedExperiment                |
| fit              | 'limma', 'lm', 'lme(r)', 'wilcoxon' |
| coef             | string: one of coefs(object)        |
| effectsize       | number: effectsize filter           |
| p                | number: p filter                    |
| fdr              | number: fdr filter                  |

| flabel           | string: feature label               |
| group            | sample groupvar                     |
| verbose          | TRUE or FALSE                       |
| title            | string                              |

### Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, fit = 'limma')
plot_heatmap(object)
```

---

plot\_joint\_density      *Plot joint density*

---

### Description

Plot joint density

### Usage

```
plot_joint_density(  
  object,  
  xvar,  
  yvar,  
  color = TRUE,  
  contour = TRUE,  
  smooth = TRUE  
)
```

### Arguments

|         |                      |
|---------|----------------------|
| object  | SummarizedExperiment |
| xvar    | svar                 |
| yvar    | svar                 |
| color   | TRUE or FALSE        |
| contour | TRUE or FALSE        |
| smooth  | TRUE or FALSE        |

### Value

ggplot

### Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file)  
set.seed(20)  
object$Height <- rnorm(ncol(object), mean = 176)  
object$Weight <- rnorm(ncol(object), mean = 85.4)  
plot_joint_density(object, 'Height', 'Weight')  
plot_joint_density(object, 'Height', 'Weight', smooth = TRUE)  
plot_joint_density(object, 'Height', 'Weight', color = TRUE)  
plot_joint_density(object, 'Height', 'Weight', contour = TRUE)
```

---

plot\_matrix                      *Plot binary matrix*

---

**Description**

Plot binary matrix

**Usage**

```
plot_matrix(mat)
```

**Arguments**

mat                      matrix

**Value**

no return (base R plot)

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
mat <- sdt(object)[, .(Subject, subgroup)]
mat$present <- 1
mat %<>% data.table::dcast(Subject ~ subgroup, value.var = 'present', fill = 0)
mat %<>% dt2mat()
plot_matrix(mat)
```

---

plot\_subgroup\_points    *Plot features*

---

**Description**

Plot features

**Usage**

```
plot_subgroup_points(
  object,
  subgroup = "subgroup",
  block = NULL,
  x = subgroup,
  color = subgroup,
  group = block,
  facet = "feature_id",
  nrow = NULL,
  scales = "free_y",
  ...,
  palette = NULL,
  fixed = list(na.rm = TRUE),
  theme = list(axis.text.x = element_text(angle = 90, vjust = 0.5, hjust = 1))
)
```

**Arguments**

|          |  |
|----------|--|
| object   | SummarizedExperiment                   |
| subgroup | subgroup svar                          |
| block    | block svar                             |
| x        | svar mapped to x                       |
| color    | svar mapped to color                   |
| group    | svar mapped to group                   |
| facet    | svar mapped to facets                  |
| nrow     | number of rows                         |
| scales   | 'free_y' etc.                          |
| ...      | mapped aesthetics                      |
| palette  | color palette (named character vector) |
| fixed    | fixed aesthetics                       |
| theme    | ggplot theme specifications            |

**Value**

ggplot object

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file, fit = 'limma')
idx <- order(fdata(object)$`p~t1-t0~limma`)[1:9]
object %<>% extract(idx, )
plot_sample_boxplots( object)
plot_feature_boxplots( object)
plot_sample_boxplots(object, x = 'Time')
plot_subgroup_points( object, subgroup = 'Time')
plot_subgroup_points( object, subgroup = 'Time', block = 'Subject')
```

---

plot\_summary

*Plot summary*

---

**Description**

Plot summary

**Usage**

```
plot_summary(
  object,
  fit = "limma",
  formula = default_formula(object),
  block = NULL,
  label = "feature_id",
  palette = make_svar_palette(object, svar = svar)
)
```

**Arguments**

|         |  |
|---------|--|
| object  | SummarizedExperiment                                       |
| fit     | linmod engine : 'limma', 'lm', 'lme', 'lmer' or 'wilcoxon' |
| formula | model formula  |
| block   | NULL or svar   |
| label   | fvar   |
| palette | NULL or colorvector  |

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% pca()
object %<>% pls(by = 'subgroup')
object %<>% fit_limma()
plot_summary(object, block = 'Subject')
```

---

plot\_survival

*Plot survival*

---

**Description**

Plot survival

**Usage**

```
plot_survival(
  object,
  assay = assayNames(object)[1],
  engine = intersect(fits(object), c("coxph", "survdif", "logrank")),
  ntile = 2,
  title = sprintf("surv ~ expr"),
  subtitle = sprintf("%s", paste0(engine, collapse = " ")),
  file = NULL,
  width = 7,
  height = 7,
  n = min(nrow(object), 9),
  ncol = 3,
  nrow = 3
)
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| assay  | value in assayNames(object)     |
| engine | 'coxph', 'survdif' or 'logrank' |
| ntile  | number of quantiles             |
| title  | string                          |

|          |                            |
|----------|----------------------------|
| subtitle | string                     |
| file     | filepath                   |
| width    | number                     |
| height   | number                     |
| n        | number of features to plot |
| ncol     | number of columns          |
| nrow     | number of rows             |

**Value**

ggplot

**Examples**

```
# Defaults
object <- survival_example()
object %<>% fit_survival()
plot_survival(object)
# Engines
object <- survival_example()
object %<>% fit_survival(engine = c('coxph', 'survdif', 'logrank'))
plot_survival(object)
# Pdf
# plot_survival(object, file = file.path('testdir', 'survival', 'survival.pdf'))
```

---

plot\_venn

*Plot venn*

---

**Description**

Plot venn

**Usage**

```
plot_venn(x)
```

**Arguments**

x list

**Examples**

```
x <- list(roundfruit = c('apple', 'orange'), redfruit = c('apple', 'strawberry'))
plot_venn(x)
```

---

plot\_venn\_heatmap      *Plot venn heatmap*

---

**Description**

Plot venn heatmap

**Usage**

```
plot_venn_heatmap(x)
```

**Arguments**

x                      list

**Examples**

```
x <- list(roundfruit = c('apple', 'orange'), redfruit = c('apple', 'strawberry'))
plot_venn_heatmap(x)
```

---

plot\_violins              *Plot sample/feature violins*

---

**Description**

Plot sample/feature violins

**Usage**

```
plot_violins(

---

pull\_columns

*Pull columns in a dataframe to the front*

---

**Description**

Pull columns in a dataframe to the front

**Usage**

```
pull_columns(df, first_cols, verbose = TRUE)
```

**Arguments**

```
df                data.frame
first_cols        character vector: columns to be pulled to the front
verbose           TRUE (default) or FALSE
```

**Value**

dataframe with re-ordered columns

**Examples**

```
df <- data.frame(
  symbol = c('A1BG', 'A2M'),
  id      = c('1',   '2'),
  name    = c('alpha-1-B glycoprotein', 'alpha-2-macroglobulin'),
  type    = c('proteinencoding', 'proteinencoding'))
first_cols <- c('id', 'symbol', 'location', 'uniprot')
pull_columns(df, first_cols)
```

---

|                 |                                   |
|-----------------|-----------------------------------|
| read_affymetrix | <i>Read affymetrix microarray</i> |
|-----------------|-----------------------------------|

---

**Description**

Read affymetrix microarray

**Usage**

```
read_affymetrix(celfiles)
```

**Arguments**

```
celfiles          string vector: CEL file paths
```

**Value**

RangedSummarizedExperiment

**Examples**

```
# Downloading example dataset fails 600s limit - example outcommented.
# url <- paste0('http://www.bioconductor.org/help/publications/2003/Chiaretti/chiaretti2/T33.tgz')

```

---

read\_msigdt

*Read msigdb datatable*

---

**Description**

Read msigdb datatable

**Usage**

```

read_msigdt(
  file = list_files(MSIGDIR, full.names = TRUE)[1],
  collections = if (is.null(file)) NULL else switch(basename(file) %>% substr(nchar(.)
- 4, nchar(.) - 3), Hs = c("C2:CP:REACTOME", "C5:GO:BP", "C5:GO:MF", "C5:GO:CC"), Mm
= c("M2:CP:REACTOME", "M5:GO:BP", "M5:GO:MF", "M5:GO:CC"))
)

```

**Arguments**

file                   msigdb file: one of the files in dir(MSIGDB).  
collections           subset of names(MSIGCOLLECTIONS)

**Examples**

```
read_msigt()
```

---

|            |                        |
|------------|------------------------|
| read_olink | <i>Read olink file</i> |
|------------|------------------------|

---

**Description**

Read olink file

**Usage**

```
read_olink(file, sample_excel = NULL, sample_tsv = NULL, by.y = "SampleID")
```

**Arguments**

file                   olinkfile  
sample\_excel          sample excel  
sample\_tsv            sample tsv  
by.y                   sample tsv mergeby column

**Value**

SummarizedExperiment

**Examples**

```
# Example data
npxdt <- data.table::data.table(OlinkAnalyze::npx_data1)[, c(1:11, 17)]
sampledt <- data.table::data.table(OlinkAnalyze::npx_data1)[, c(1, 12:15)]
sampledt %<>% extract(!grepl('CONTROL', SampleID))
sampledt %<>% unique()

# Write to file
file <- paste0(tempfile(), '.olink.csv')
samplefile <- paste0(tempfile(), '.samples.xlsx')

|-------------|--------------------|
| read_salmon | <i>Read salmon</i> |
|-------------|--------------------|

---

**Description**

Read salmon

**Usage**

```
read_salmon(dir, sfile = NULL, by = NULL, ensdb = NULL)
```

**Arguments**

|       |                               |
|-------|-------------------------------|
| dir   | salmon results rootdir        |
| sfile | samplefile                    |
| by    | samplefile column to merge by |
| ensdb | EnsDb object                  |

**Value**

SummarizedExperiment

**Examples**

```
# dir <- '../bh/salmon_quants'  
# sfile <- '../bh/samplesheet.csv'  
# by <- 'salmonDir'  
# ah <- AnnotationHub::AnnotationHub()  
# ensdb <- ah[['AH98078']]  
# read_salmon(dir, sfile = sfile, by = 'salmonDir', ensdb = ensdb)
```

---

|                |                        |
|----------------|------------------------|
| read_uniprotdt | <i>Read fasta hdrs</i> |
|----------------|------------------------|

---

**Description**

Read fasta hdrs

**Usage**

```
read_uniprotdt(fastafile, fastafields = FASTAFIELDS, verbose = TRUE)
```

```
parse_maxquant_hdrs(fastahdrs)
```

```
read_contaminantdt(force = FALSE, verbose = TRUE)
```

**Arguments**

|             |  |
|-------------|--|
| fastafile   | string (or charactervector)                          |
| fastafields | charactervector : which fastahdr fields to extract ? |
| verbose     | bool   |
| fastahdrs   | character vector                                     |
| force       | whether to overwrite existing file                   |

**Value**

data.table(uniprot, protein, gene, uniprot, reviewed, existence)

**Note**

existence values are always those of the canonical isoform (no isoform-level resolution for this field)

**Examples**

```
# uniprot hdrs
  fastafile <- system.file('extdata/uniprot_hsa_20140515.fasta', package = 'autonomics')
  read_uniprot(dt, fastafile)

# maxquant hdrs

| object      | SummarizedExperiment       |
| subgroupvar | subgroup variable (string) |
| subgroupctr | control subgroup (string)  |
| block       | block variable (string)    |
| verbose     | TRUE/FALSE                 |

### Value

SummarizedExperiment

### Examples

```
file <- system.file('extdata/atkin.somascan.adat', package = 'autonomics')
object <- read_somascan(file)
object %<>% filter_samples(subgroup %in% c('t1', 't2'), verbose = TRUE)
rm_singleton_samples(object, subgroupvar = 'Subject')
rm_unmatched_samples(object, subgroupvar = 'subgroup', block = 'Subject')
```

---

scaledlibsizes    *Get tmm-scaled libsizes*

---

### Description

Get tmm-scaled libsizes

### Usage

```
scaledlibsizes(counts)
```

**Arguments**

counts            counts matri

**Value**

scaled libsize vector

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
scaledlibsizes(counts(object))
```

---

|          |                                |
|----------|--------------------------------|
| scoremat | <i>Extract scores/loadings</i> |
|----------|--------------------------------|

---

**Description**

Extract scores/loadings

**Usage**

```
scoremat(object, method = "pca", by = biplot_by(object, method), dim = 1:2)
scores(object, method = "pca", by = biplot_by(object, method), dim = 1)
loadingmat(object, method = "pca", by = biplot_by(object, method), dim = 1:2)
loadings(object, method = "pca", by = biplot_by(object, method), dim = 1)
```

**Arguments**

object            SummarizedExperiment  
method            'pca', 'pls', etc.  
by                svar (string)  
dim                numeric vector

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% pca()
  scores(object)[1:2]
  loadings(object)[1:2]
  scoremat(object)[1:2, ]
  loadingmat(object)[1:2, ]
```

---

|         |                    |
|---------|--------------------|
| slevels | <i>Get slevels</i> |
|---------|--------------------|

---

**Description**

Get svar levels

**Usage**

```
slevels(object, svar)

subgroup_levels(object)
```

**Arguments**

|        |                                      |
|--------|--------------------------------------|
| object | SummarizedExperiment, eSet, or eList |
| svar   | sample var (character)               |

**Value**

svar values (character)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
slevels(object, 'subgroup')
subgroup_levels(object)
```

---

|        |                       |
|--------|-----------------------|
| snames | <i>Get/Set snames</i> |
|--------|-----------------------|

---

**Description**

Get/Set sample names

**Usage**

```
snames(object)

## S4 method for signature 'SummarizedExperiment'
snames(object)

snames(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
snames(object) <- value
```

**Arguments**

|        |                                 |
|--------|---------------------------------|
| object | SummarizedExperiment            |
| value  | string vector with sample names |

**Value**

sample names vector (get) or updated eSet (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
head(snames(object))
head(snames(object) %<>% paste0('SAMPLE_', .))
```

---

|               |                      |
|---------------|----------------------|
| split_samples | <i>Split samples</i> |
|---------------|----------------------|

---

**Description**

Split samples by svar

**Usage**

```
split_samples(object, by = "subgroup")

cbind_imputed(objlist)

split_features(object, by)
```

**Arguments**

|         |                           |
|---------|---------------------------|
| object  | SummarizedExperiment      |
| by      | svar to split by (string) |
| objlist | SummarizedExperiment list |

**Value**

SummarizedExperiment list

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
objlist <- split_features(object, by = 'PLATFORM')
objlist <- split_samples(object, 'Diabetes')
objlist %<>% Map(impute, .)
object <- cbind_imputed(objlist)
```

---

stri\_any\_regex            *Does any string have a regex*

---

**Description**

Does any string have a regex

**Usage**

```
stri_any_regex(str, pattern)
```

**Arguments**

|         |               |
|---------|---------------|
| str     | string vector |
| pattern | string        |

**Value**

TRUE or FALSE

**Examples**

```
str <- c('s1 Spectral Count', 's1 Unique Spectral Count')
patterns <- c('Spectral Count', '(?!Unique) Spectral Count', 'Intensity')
stringi::stri_detect_regex(str, pattern = patterns[1])
stringi::stri_detect_regex(str, pattern = patterns[2])
stringi::stri_detect_regex(str, pattern = patterns[3])
stri_any_regex( str, pattern = patterns)
```

---

stri\_detect\_fixed\_in\_collapsed  
*Detect fixed patterns in collapsed strings*

---

**Description**

Detect fixed patterns in collapsed strings

**Usage**

```
stri_detect_fixed_in_collapsed(x, patterns, sep)
```

**Arguments**

|          |  |
|----------|--|
| x        | vector with collapsed strings                        |
| patterns | vector with fixed patterns (strings)                 |
| sep      | collapse separator (string) or NULL (if uncollapsed) |

**Value**

boolean vector

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
x <- fdt(object)$uniprot
patterns <- c('A0A0R4IKT8', 'Q7T3G6')
table(stri_detect_fixed_in_collapsed(x = x, patterns = patterns, sep = ';'))
```

---

|                |                            |
|----------------|----------------------------|
| subgroup_array | <i>Get subgroup matrix</i> |
|----------------|----------------------------|

---

**Description**

Arrange (subgroup)levels in matrix

**Usage**

```
subgroup_array(object, subgroupvar)
subgroup_matrix(object, subgroupvar)
```

**Arguments**

|             |                      |
|-------------|----------------------|
| object      | SummarizedExperiment |
| subgroupvar | subgroup svar        |

**Value**

matrix

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object$subgroup <- paste0(object$Diabetes, '.', object$subgroup)
subgroup_matrix(object, 'subgroup')
```

---

|                   |                          |
|-------------------|--------------------------|
| subtract_baseline | <i>Subtract baseline</i> |
|-------------------|--------------------------|

---

**Description**

Subtract baseline level within block

**Usage**

```

subtract_baseline(
  object,
  subgroupvar,
  subgroupctr = slevels(object, subgroupvar)[1],
  block = NULL,
  assaynames = setdiff(assayNames(object), c("weights", "pepcounts")),
  verbose = TRUE
)

subtract_pairs(
  object,
  subgroupvar = "subgroup",
  subgroupctr = slevels(object, subgroupvar)[1],
  block,
  assaynames = assayNames(object)[1],
  verbose = TRUE
)

subtract_differences(object, block, subgroupvar, verbose = TRUE)

```

**Arguments**

|             |  |
|-------------|--|
| object      | SummarizedExperiment                               |
| subgroupvar | subgroup svar                                      |
| subgroupctr | control subgroup                                   |
| block       | block svar (within which subtraction is performed) |
| assaynames  | which assays to subtract for                       |
| verbose     | TRUE/FALSE   |

**Details**

subtract\_baseline subtracts baseline levels within block, using the medoid baseline sample if multiple exist.

subtract\_pairs also subtracts baseline level within block. It cannot handle multiple baseline samples, but has instead been optimized for many blocks

subtract\_differences subtracts differences between subsequent levels, again within block

**Value**

SummarizedExperiment

**Examples**

```

# read
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object0 <- read_metabolon(file)
pca(object0, plot = TRUE, color = 'Time')

```

```
# subtract_baseline: takes medoid of baseline samples if multiple
  object <- subtract_baseline(object0, block = 'Subject', subgroupvar = 'Time')
  pca(object, plot = TRUE, color = 'Time')

# subtract_pairs: optimized for many blocks
  object <- subtract_pairs(object0, block = 'Subject', subgroupvar = 'Time')
  pca(object, plot = TRUE, color = 'Time')

# subtract_differences
  object <- subtract_differences(object0, block = 'Subject', subgroupvar = 'Time')
  values(object) %<>% na_to_zero()
  pca(object, plot = TRUE, color = 'Time')
```

---

sumexplist\_to\_longdt    *SummarizedExperiment list to long data.table*

---

## Description

SummarizedExperiment list to long data.table

## Usage

```
sumexplist_to_longdt(
  sumexplist,
  svars = intersect("subgroup", autonomics::svars(sumexplist[[1]])),
  fvars = intersect("gene", autonomics::fvars(sumexplist[[1]])),
  setvarname = "set"
)
```

## Arguments

|            |                               |
|------------|-------------------------------|
| sumexplist | list of SummarizedExperiments |
| svars      | character vector              |
| fvars      | character vector              |
| setvarname | string                        |

## Value

data.table

## Examples

```
subgroups <- paste0(c('E00', 'E01', 'E02', 'E05', 'E15', 'E30', 'M00'), '_STD')
rnafile <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
profile <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
fosfile <- system.file('extdata/billing19.phosphosites.txt', package = 'autonomics')
rna <- read_rnaseq_counts(rnafile)
pro <- read_maxquant_proteingroups(file = profile, subgroups = subgroups)
fos <- read_maxquant_phosphosites(fosfile = fosfile, profile = profile, subgroups = subgroups)
pro$subgroup %<>% stringi::stri_replace_first_fixed('_STD', '')
fos$subgroup %<>% stringi::stri_replace_first_fixed('_STD', '')
```

```
sumexplist <- list(rna = rna, pro = pro, fos = fos)
dt <- sumexplist_to_longdt(sumexplist, setvarname = 'platform')
dt %<>% extract(gene %in% c('TNMD', 'TSPAN6'))
```

---

sumexp\_to\_tsv                      *Write sumexp to tsv*

---

### Description

Write sumexp to tsv

### Usage

```
sumexp_to_tsv(object, assay = assayNames(object)[1], file)
```

### Arguments

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| assay  | string               |
| file   | filename             |

### Examples

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file, fit = 'limma')
tsv <- file.path(tempdir(), 'fukuda20.proteingroups.tsv')
sumexp_to_tsv(object, file = tsv)
```

---

sumexp\_to\_widedt                      *SummarizedExperiment to data.table*

---

### Description

SummarizedExperiment to data.table

### Usage

```
sumexp_to_widedt(
  object,
  fvars = autonomics::fvars(object),
  assay = assayNames(object)[1]
)

sumexp_to_longdt(
  object,
  fvars = intersect("feature_name", autonomics::fvars(object)),
  svars = intersect("subgroup", autonomics::svars(object)),
  assay = assayNames(object) %>% intersect(c(.[1], "is_imputed"))
)

sumexp_to_subrep_dt(object, subgroup = subgroup)
```

**Arguments**

|          |                                      |
|----------|--------------------------------------|
| object   | sumexp                               |
| fvars    | additional fvars to include in table |
| assay    | matrix in assays(object) to be used  |
| svars    | additional svars to include in table |
| subgroup | subgroup (sym)                       |

**Details**

- sumexp\_to\_widedt: feature x sample
- sumexp\_to\_subrep\_dt: feature.subgroup x replicate
- sumexp\_to\_longdt: feature.sample

**Value**

data.table

**Examples**

```
# Atkin Hypoglycemia
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
sumexp_to_widedt(object)
sumexp_to_longdt(object)
sumexp_to_subrep_dt(object)

# Fukuda
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
values(object)
fdt(object)
object %<>% impute()
table(fdt(object)$imputed)
sumexp_to_longdt(object)
sumexp_to_widedt(object)
sumexp_to_longdt(object)
```

---

summarize\_fit

*Summarize fit*

---

**Description**

Summarize fit

**Usage**

```

summarize_fit(object, ...)

## S3 method for class 'data.table'
summarize_fit(
  object,
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  ...
)

## S3 method for class 'SummarizedExperiment'
summarize_fit(
  object,
  fit = fits(object),
  coefs = autonomics::coefs(object, fit = fit),
  ...
)

```

**Arguments**

|        |   |
|--------|---|
| object | SummarizedExperiment or data.table              |
| ...    | S3 dispatch                                     |
| fit    | 'limma', 'lme', 'lm', 'lme', 'wilcoxon' or NULL |
| coefs  | string vector                                   |

**Value**

data.table(contrast, nup, ndown)

**Examples**

```

file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma()
object %<>% fit_lm()
summarize_fit(object, coefs = c('t1-t0', 't2-t0', 't3-t0'))

```

---

SURVIVALENGINES

*Survival engines*

---

**Description**

Survival engines

**Usage**

SURVIVALENGINES

**Format**

An object of class character of length 3.

**Examples**

```
SURVIVALENGINES
```

---

```
survival_example      Fit survival
```

---

**Description**

Investigates association between expression and survival

**Usage**

```
survival_example()

fit_survival(
  object,
  ntile = 2,
  engine = c("survdiff", "coxph", "logrank")[1:2],
  assay = assayNames(object)[1],
  sep = FITSEP,
  verbose = TRUE,
  outdir = NULL,
  plot = if (is.null(outdir)) FALSE else TRUE,
  width = 7,
  height = 7,
  n = min(nrow(object), 9),
  ncol = 3,
  nrow = 3,
  writefunname = "write_x1"
)
```

**Arguments**

|         |   |
|---------|---|
| object  | SummarizedExperiment  |
| ntile   | number  |
| engine  | 'coxph' (survival), 'survdiff' (survival), 'logrank' (coin) |
| assay   | string  |
| sep     | fvar string separator : e.g. '~' gives p~surv~LR50          |
| verbose | TRUE or FALSE   |
| outdir  | dir   |
| plot    | TRUE or FALSE   |
| width   | number  |
| height  | number  |
| n       | number of features to plot                                  |

|              |                           |
|--------------|---------------------------|
| ncol         | number of cols            |
| nrow         | number of rows            |
| writefunname | 'write_xl' or 'write_ods' |

### Details

Investigates association between expression and survival.  
 Continuous for coxph.  
 Categorical for survdiff or logrank  
 Samples are split into ntile expression groups.  
 Survival is compared between highest and lowest expressors.

Three statistics recorded per engine

p  
 effect: coef (coxph)  
 mean survival difference (survdiff, logrank)  
 t: z (coxph)  
 $\chi^2$  (survdiff, logrank)  
 sign reflects whether expression  
 increases (positive) or decreases (negative) survival

### Value

SummarizedExperiment

### Examples

```
# Defaults
object <- survival_example()
fit_survival(object)
# Engines
fit_survival(object, engine = c('coxph', 'survdiff'))
fit_survival(object, engine = c('coxph', 'survdiff', 'logrank'))
# Quantiles
fit_survival(object, engine = 'logrank')
fit_survival(object, engine = 'logrank', ntile = 4)
# Plot
fit_survival(object)
fit_survival(object, plot = TRUE)
fit_survival(object, engine = c('coxph', 'survdiff', 'logrank'), plot = TRUE)
```

---

svalues

*Get/Set svalues*

---

### Description

Get/Set svar values

**Usage**

```
svalues(object, svar)

subgroup_values(object)

sampleid_values(object)

svalues(object, svar) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
svalues(object, svar) <- value
```

**Arguments**

|        |                        |
|--------|------------------------|
| object | SummarizedExperiment   |
| svar   | sample var (character) |
| value  | value vector           |

**Value**

character vector (get) or SummarizedExperiment (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
svalues(object, 'subgroup')
subgroup_values(object)
```

---

svars

*Get/Set svars*

---

**Description**

Get/Set sample variables

**Usage**

```
svars(object)

## S4 method for signature 'SummarizedExperiment'
svars(object)

## S4 method for signature 'MultiAssayExperiment'
svars(object)

svars(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,character'
svars(object) <- value

## S4 replacement method for signature 'MultiAssayExperiment,character'
svars(object) <- value
```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| value  | string factor with variable names |

**Value**

sample variable names (get) or updated SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
svars(object)[1]
(svars(object)[1] %<>% paste0('1'))
```

---

|                |                                     |
|----------------|-------------------------------------|
| systematic_nas | <i>Is systematic/random/full NA</i> |
|----------------|-------------------------------------|

---

**Description**

Is systematic/random/full NA

**Usage**

```
systematic_nas(object, by = "subgroup", frac = 0.5)
```

```
random_nas(object, by = "subgroup")
```

```
no_nas(object)
```

**Arguments**

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| by     | svar (string)        |
| frac   | fraction             |

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
table(systematic_nas(object)) # missing in some subgroups, present in others
table(random_nas(object))   # missing in some samples, independent of subgroup
table(no_nas(object))       # missing in no samples
```

---

|              |                     |
|--------------|---------------------|
| tag_features | <i>Tag features</i> |
|--------------|---------------------|

---

**Description**

Tag features

**Usage**

```
tag_features(
  object,
  keyvar,
  sep,
  features,
  tagvar = get_name_in_parent(features),
  verbose = TRUE
)
```

**Arguments**

|          |                                     |
|----------|-------------------------------------|
| object   | SummarizedExperiment                |
| keyvar   | string : intersection fvar          |
| sep      | string : keyvar collapse separator  |
| features | character vector : intersection set |
| tagvar   | string :                            |
| verbose  | TRUE or FALSE                       |

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/atkin.somascan.adat', package = 'autonomics')
object <- read_somascan(file)
features <- AnnotationDbi::keys(org.Hs.eg.db::org.Hs.eg.db, keytype = 'SYMBOL')
object %<>% tag_features(keyvar = 'EntrezGeneSymbol', sep = ' ', features)
table(fdt(object)$features)
```

---

|                 |                        |
|-----------------|------------------------|
| tag_hdlproteins | <i>Tag hdlproteins</i> |
|-----------------|------------------------|

---

**Description**

Tag hdlproteins

**Usage**

```
tag_hdlproteins(object, verbose = TRUE)
```

**Arguments**

object            SummarizedExperiment  
verbose           TRUE or FALSE

**Value**

SummarizedExperiment

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')  
object <- read_maxquant_proteingroups(file)  
object %<>% tag_hdlproteins()  
fdt(object)
```

---

TAXON\_TO\_ORGNAME            *Annotation Maps*

---

**Description**

Annotation Maps

**Usage**

TAXON\_TO\_ORGNAME  
  
ABBREV\_TO\_ORGNAME  
  
REVIEWED\_TO\_NUMBER  
  
EXISTENCE\_TO\_NUMBER

**Format**

An object of class character of length 7.  
An object of class character of length 4.  
An object of class character of length 2.  
An object of class numeric of length 4.

**Examples**

```
TAXON_TO_ORGNAME['9606']  
ABBREV_TO_ORGNAME['HSA']  
REVIEWED_TO_NUMBER['reviewed']  
EXISTENCE_TO_NUMBER['Evidence at protein level']
```

---

 TESTS

*Statistical models supported in autonomics*

---

**Description**

Statistical models supported in autonomics

**Usage**

TESTS

**Format**

An object of class character of length 5.

**Examples**

TESTS

---

tpm

*Get/Set tpm*

---

**Description**

Get / Set tpm matrix

**Usage**

```
tpm(object)
```

```
## S4 method for signature 'SummarizedExperiment'
```

```
tpm(object)
```

```
tpm(object) <- value
```

```
## S4 replacement method for signature 'SummarizedExperiment,matrix'
```

```
tpm(object) <- value
```

```
## S4 replacement method for signature 'SummarizedExperiment,numeric'
```

```
tpm(object) <- value
```

**Arguments**

object            SummarizedExperiment

value            tpm matrix (features x samples)

**Value**

tpm matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file, plot=FALSE)
tpm(object) <- values(object)
tpm(object)[1:3, 1:3]
```

---

|                  |                         |
|------------------|-------------------------|
| twofactor_sumexp | <i>twofactor sumexp</i> |
|------------------|-------------------------|

---

**Description**

twofactor sumexp

**Usage**

```
twofactor_sumexp()
```

**Value**

SummarizedExperiment

---

|            |                              |
|------------|------------------------------|
| uncollapse | <i>Uncollapse/Recollapse</i> |
|------------|------------------------------|

---

**Description**

Uncollapse data.table cols

**Usage**

```
uncollapse(dt, ..., sep = ";")
```

```
recollapse(dt, by, sep = ";")
```

**Arguments**

dt            data.table

...           cols

sep           string

by            string

**Examples**

```
# Example data
(dt <- data.table::data.table(
  uniprot = 'Q9BQL6;Q96AC1;Q96AC1-3',
  protein = 'FERM1_HUMAN;FERM2_HUMAN',
  gene    = 'FERMT1;FERMT2',
  family  = 'FERM'))

# Uncollapse
uncollapse(dt, protein, gene, sep = ';')
recollapse( uncollapse(dt, protein, gene, sep = ';'), by = 'uniprot')

# Unchanged when no sep
uncollapse(dt, family, sep = ';')
uncollapse(dt, family, sep = 'NOSEP')
```

values

*Get/Set expr values***Description**

Get/Set value matrix

**Usage**

values(object)

## S4 method for signature 'SummarizedExperiment'

values(object)

values(object) &lt;- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'

values(object) &lt;- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'

values(object) &lt;- value

**Arguments**

object SummarizedExperiment

value ratio matrix (features x samples)

**Value**

value matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
values(object)[1:3, 1:3]
values(object) <- 0
values(object)[1:3, 1:3]
```

---

varlevels\_dont\_clash *Are varlevels unique*

---

### Description

Are varlevels unique

### Usage

```
varlevels_dont_clash(object, ...)

## S3 method for class 'data.table'
varlevels_dont_clash(object, vars = names(object), ...)

## S3 method for class 'SummarizedExperiment'
varlevels_dont_clash(object, vars = svars(object), ...)
```

### Arguments

|        |                                    |
|--------|------------------------------------|
| object | SummarizedExperiment or data.table |
| ...    | required for s3 dispatch           |
| vars   | character vector                   |

### Value

TRUE or FALSE

### Examples

```
require(data.table)
object1 <- data.table(expand.grid(genome = c('WT', 'MUT'), treat = c('control', 'drug')))
object2 <- data.table(expand.grid(mutant = c('YES', 'NO'), treated = c('YES', 'NO')))
varlevels_dont_clash(object1)
varlevels_dont_clash(object2)
```

---

venn\_detects *Venn detects*

---

### Description

Venn diagram full/consistent/random detects

### Usage

```
venn_detects(object, by = "subgroup")
```

### Arguments

|        |                      |
|--------|----------------------|
| object | SummarizedExperiment |
| by     | svar (string)        |

**Value**

NULL

**Examples**

```
file <- system.file('extdata/fukuda20.proteingroups.txt', package = 'autonomics')
object <- read_maxquant_proteingroups(file)
venn_detects(object, 'subgroup')
```

weights

*Get/Set weights***Description**

Get/Set weight matrix

**Usage**

```
weights(object, ...)

## S4 method for signature 'SummarizedExperiment'
weights(object)

weights(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,matrix'
weights(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,numeric'
weights(object) <- value

## S4 replacement method for signature 'SummarizedExperiment,NULL'
weights(object) <- value
```

**Arguments**

|        |                                   |
|--------|-----------------------------------|
| object | SummarizedExperiment              |
| ...    | additional params                 |
| value  | ratio matrix (features x samples) |

**Value**

weight matrix (get) or updated object (set)

**Examples**

```
file <- system.file('extdata/billing19.rnacounts.txt', package = 'autonomics')
object <- read_rnaseq_counts(file)
weights(object)[1:3, 1:2]
weights(object) <- 1
weights(object)[1:3, 1:2]
```

---

`write_xl`*Write xl/ods*

---

**Description**

Write xl/ods

**Usage**

```
write_xl(  
  object,  
  xlfile,  
  fitcoefs = autonomics::fitcoefs(object),  
  verbose = TRUE  
)  
  
write_ods(  
  object,  
  odsfile,  
  fitcoefs = autonomics::fitcoefs(object),  
  verbose = TRUE  
)
```

**Arguments**

|                       |                      |
|-----------------------|----------------------|
| <code>object</code>   | SummarizedExperiment |
| <code>xlfile</code>   | file                 |
| <code>fitcoefs</code> | character vector     |
| <code>verbose</code>  | TRUE or FALSE        |
| <code>odsfile</code>  | file                 |

**Value**

filepath

**Examples**

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')  
object <- read_metabolon(file, fit = 'limma')  
xlfile <- file.path(tempdir(), 'fukuda20.proteingroups.fdt.xlsx')  
odsfile <- file.path(tempdir(), 'fukuda20.proteingroups.fdt.ods')  
# write_xl(object, xlfile)  
# write_ods(object, odsfile)
```

---

X *Model based prediction*

---

### Description

Model based prediction

### Usage

```
X(
  object,
  formula = default_formula(object),
  drop = varlevels_dont_clash(object, all.vars(formula)),
  codingfun = contr.treatment.explicit
)

beta(object, fit = fits(object)[1])
```

### Arguments

|           |                                    |
|-----------|------------------------------------|
| object    | SummarizedExperiment or data.frame |
| formula   | formula                            |
| drop      | TRUE or FALSE                      |
| codingfun | function                           |
| fit       | 'limma', 'lm', 'lme', 'wilcoxon'   |

### Value

beta matrix (nlevel x nfeature)

### Examples

```
file <- system.file('extdata/atkin.metabolon.xlsx', package = 'autonomics')
object <- read_metabolon(file)
object %<>% fit_limma(block = 'Subject') # intercept required!
beta(object) # betas : nlevel x nfeature
X(object) # design : nlevel x nlevel
X(object) %*% beta(object) # response : nlevel x nfeature
```

---

zero\_to\_na

*Change nondetect representation*

---

### Description

Change nondetect representation

**Usage**

```
zero_to_na(x, verbose = FALSE)

nan_to_na(x, verbose = FALSE)

na_to_zero(x, verbose = FALSE)

inf_to_na(x, verbose = FALSE)

minusinf_to_na(x, verbose = FALSE)

na_to_string(x)
```

**Arguments**

|         |            |
|---------|------------|
| x       | matrix     |
| verbose | logical(1) |

**Value**

Updated matrix

**Examples**

```
matrix(c(0, 7), nrow=1)
matrix(c(0, 7), nrow=1) %>% zero_to_na(verbose=TRUE)

matrix(c(NA, 7), nrow=1)
matrix(c(NA, 7), nrow=1) %>% na_to_zero(verbose=TRUE)

matrix(c(NaN, 7), nrow=1)
matrix(c(NaN, 7), nrow=1) %>% nan_to_na(verbose=TRUE)

matrix(c(Inf, 7), nrow=1)
matrix(c(Inf, 7), nrow=1) %>% inf_to_na(verbose=TRUE)

matrix(c(-Inf, 7), nrow=1)
matrix(c(-Inf, 7), nrow=1) %>% minusinf_to_na(verbose=TRUE)
```
