Package ‘GA4GHclient’

March 27, 2024

Type Package
Title A Bioconductor package for accessing GA4GH API data servers
Version 1.26.0
Description GA4GHclient provides an easy way to access public data servers through Global Alliance for Genomics and Health (GA4GH) genomics API. It provides low-level access to GA4GH API and translates response data into Bioconductor-based class objects.
License GPL (>= 2)
Depends S4Vectors
Imports BiocGenerics, Biostrings, dplyr, GenomeInfoDb, GenomicRanges, htr, IRanges, jsonlite, methods, VariantAnnotation
Suggests AnnotationDbi, BiocStyle, DT, knitr, org.Hs.eg.db, rmarkdown, testthat, TxDb.Hsapiens.UCSC.hg19.knownGene
LazyData TRUE
RoxygenNote 6.0.1
VignetteBuilder knitr
URL https://github.com/labbcb/GA4GHclient

getBiosample

getBiosample function

Description

Get a biosample by its ID.

Usage

getBiosample(host, biosampleId)

Arguments

host URL of GA4GH API data server.
biosampleId ID of the biosample requested.

Details

This function requests GET host/datasets/biosampleId.

Value

Dataframe object.

References

Official documentation.

See Also

Dataframe, searchBiosamples
Examples

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
biosampleId <- searchBiosamples(host, datasetId, nrows = 1)$id
getBiosample(host, biosampleId)

## End(Not run)
```

---

**getCallSet**

**getCallSet function**

---

**Description**

Get a call set by its ID.

**Usage**

```r
getCallSet(host, callSetId)
```

**Arguments**

- **host**: URL of GA4GH API data server.
- **callSetId**: The ID of the CallSet to be retrieved.

**Details**

This request maps to GET host/callsets/callSetId.

**Value**

DataFrame object.

**References**

Official documentation.

**See Also**

DataFrame, searchCallSets
**getDataset**

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 1)$id
callSetId <- searchCallSets(host, variantSetId, nrows = 1)$id
getCallSet(host, callSetId)
## End(Not run)
```

**Description**

Get a dataset by its ID.

**Usage**

```r
getDataset(host, datasetId)
```

**Arguments**

- `host` URL of GA4GH API data server.
- `datasetId` The ID of the dataset to be retrieved.

**Details**

This function requests GET `host/datasets/datasetId`.

**Value**

`DataFrame` object.

**References**

Official documentation.

**See Also**

`DataFrame`, `searchDatasets`

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
getDataset(host, datasetId)
## End(Not run)
```
getExpressionLevel function

Description
Get an expression level by its ID.

Usage
getExpressionLevel(host, expressionLevelId)

Arguments
host URL of GA4GH API data server.
expressionLevelId ID of the expression level.

Details
This function requests GET host/expressionlevels/expressionLevelId.

Value
DataFrame object.

References
Official documentation.

See Also
DataFrame, searchExpressionLevels

Examples
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
rnaQuantificationSetId <- searchRnaQuantificationSets(host, datasetId, nrow = 1)$id
rnaQuantificationId <- searchRnaQuantifications(host, rnaQuantificationSetId, nrows = 1)$id
eexpressionLevelId <- searchExpressionLevels(host, rnaQuantificationId, nrows = 1)$id
getExpressionLevel(host, expressionLevelId)

## End(Not run)
**getFeature**

**getFeature function**

**Description**
Get a feature set by its ID (a line of genomic feature file).

**Usage**

```
getFeature(host, featureId)
```

**Arguments**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>host</code></td>
<td>URL of GA4GH API data server.</td>
</tr>
<tr>
<td><code>featureId</code></td>
<td>The ID of the feature to be retrieved.</td>
</tr>
</tbody>
</table>

**Details**
This function requests `GET host/features/featureId`.

**Value**

`DataFrame` object.

**References**

Official documentation.

**See Also**

`DataFrame`, `searchFeatures`

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
featureSetId <- searchFeatureSets(host, datasetId, nrows = 1)$id
featureId <- searchFeatures(host, featureSetId, nrows = 1)$id
getFeature(host, featureId)
## End(Not run)
```
getFeatureSet

getFeatureSet function

Description

Get a feature set by its ID.

Usage

getFeatureSet(host, featureSetId)

Arguments

host URL of GA4GH API data server.
featureSetId The ID of the FeatureSet to be retrieved.

Details

This function requests GET host/featuresets/featureSetId.

Value

DataFrame object.

References

Official documentation.

See Also

DataFrame, searchFeatureSets

Examples

host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
featureSetId <- searchFeatureSets(host, datasetId, nrows = 1)$id
getFeatureSet(host, featureSetId)

## End(Not run)
getIndividual function

Description
Get an individual by its ID.

Usage
getIndividual(host, individualId)

Arguments
- host: URL of GA4GH API data server.
- individualId: ID of the individual requested.

Details
This function requests GET host/individuals/individualId.

Value
DataFrame object.

References
Official documentation.

See Also
DataFrame, searchIndividuals

Examples
```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
individualId <- searchIndividuals(host, datasetId, nrows = 1)$id
getIndividual(host, individualId)
## End(Not run)
```
getReadGroupSet

**Description**

Get a read group set by its ID.

**Usage**

getReadGroupSet(host, readGroupSetId)

**Arguments**

- **host**: URL of GA4GH API data server.
- **readGroupSetId**: The ID of the ReadGroupSet to be retrieved.

**Details**

This function requests GET host/readgroupsets/readGroupSetId.

**Value**

DataFrame object.

**References**

Official documentation.

**See Also**

DataFrame, searchReadGroupSets

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
readGroupSetId <- searchReadGroupSets(host, datasetId, nrows = 1)$id
getReadGroupSet(host, readGroupSetId)
## End(Not run)
```
**getDescription**

*getDescription function*

**Description**

Get a reference by its ID.

**Usage**

getDescription(host, referenceId)

**Arguments**

- **host**: URL of GA4GH API data server.
- **referenceId**: The ID of the Reference to be retrieved.

**Details**

This function requests GET host/references/referenceId.

**Value**

*DataFrame* object.

**References**

Official documentation.

**See Also**

*DataFrame, searchReferences*

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
referenceSetId <- searchReferenceSets(host, nrows = 1)$id
referenceId <- searchReferences(host, referenceSetId, nrows = 1)$id
ggetDescription(host, referenceId)
## End(Not run)
```
getDescription

getAddress

Description
Get a reference set by its ID.

Usage
getReferenceSet(host, referenceSetId)

Arguments
- host: URL of GA4GH API data server.
- referenceSetId: The ID of the ReferenceSet to be retrieved.

Details
This function requests GET host/referencesets/referenceSetId.

Value
DataFrame object.

References
Official documentation.

See Also
DataFrame, searchReferenceSets

Examples
host <- "http://1kgenomes.ga4gh.org/
## Not run:
referenceSetId <- searchReferenceSets(host, nrows = 1)$id
getReferenceSet(host, referenceSetId)

## End(Not run)
getRnaQuantification

getRnaQuantification function

**Description**

Get an RNA quantification by its ID.

**Usage**

```
getRnaQuantification(host, rnaQuantificationId)
```

**Arguments**

- **host**: URL of GA4GH API data server.
- **rnaQuantificationId**: ID of the RNA quantification requested.

**Details**

This function requests `GET host/rnaquantifications/rnaQuantificationId`.

**Value**

`DataFrame` object.

**References**

Official documentation.

**See Also**

`DataFrame`, `searchRnaQuantifications`

**Examples**

```
host <- "http://1kgenomes.ga4gh.org/
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
rnaQuantificationSetId <- searchRnaQuantificationSets(host, datasetId, nrows = 1)$id
rnaQuantificationId <- searchRnaQuantifications(host, rnaQuantificationSetId, nrows = 1)$id
getRnaQuantification(host, rnaQuantificationId)
## End(Not run)
```
getRnaQuantificationSet

**getRnaQuantificationSet function**

**Description**

Get an RNA quantification set by its ID.

**Usage**

getRnaQuantificationSet(host, rnaQuantificationSetId)

**Arguments**

- **host** URL of GA4GH API data server.
- **rnaQuantificationSetId** ID of the RNA quantification set requested.

**Details**

This function requests GET \texttt{host/rnaquantificationsets/rnaQuantificationSetId}.

**Value**

\texttt{DataFrame} object.

**References**

Official documentation.

**See Also**

\texttt{DataFrame, searchRnaQuantificationSets}

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
rnaQuantificationSetId <- searchRnaQuantificationSets(host, datasetId, nrows = 1)$id
getRnaQuantificationSet(host, rnaQuantificationSetId)
## End(Not run)
```
getVariant function

Description
Get a variant by its ID with all call sets for this variant.

Usage
getVariant(host, variantId, asVCF = TRUE)

Arguments
- host: URL of GA4GH API data server.
- variantId: The ID of the Variant to be retrieved.
- asVCF: If TRUE the function will return a VCF with header (default), otherwise it will return a DataFrame.

Details
This function requests GET host/variants/variantId.

Value
VCF object (when asVCF = TRUE) or DataFrame object (otherwise).

References
Official documentation.

See Also
DataFrame, searchVariants, searchVariantsByGRanges, VCF, makeVCFFromGA4GHResponse

Examples
host <- "http://1kgenomes.ga4gh.org/
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 1)$id
variantId <- searchVariants(host, variantSetId, "1", 15031, 15031)$id
getVariant(host, variantId)

getVariant(host, variantId, asVCF = FALSE)
## End(Not run)
getVariantAnnotationSet

*Gets getVariantAnnotationSet function*

**Description**

Get a variant annotation set by its ID.

**Usage**

```r
getVariantAnnotationSet(host, variantAnnotationSetId)
```

**Arguments**

- `host` URL of GA4GH API data server.
- `variantAnnotationSetId` ID of variant annotation set.

**Details**

This function requests GET `host/variantannotationsets/variantAnnotationSetId`.

**Value**

`DataFrame` object.

**References**

- [Official documentation](#).

**See Also**

`DataFrame`, `searchVariantAnnotationSets`

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 2)$id[2]
id <- searchVariantAnnotationSets(host, variantSetId, nrows = 1)$id
getVariantAnnotationSet(host, variantAnnotationSetId = id)
## End(Not run)
```
getVariantSet

getVariantSet function.

Description
Get a variant set by its ID.

Usage
getVariantSet(host, variantSetId, asVCFHeader = TRUE)

Arguments
- host: URL of GA4GH API data server.
- variantSetId: The ID of the VariantSet to be retrieved.
- asVCFHeader: If TRUE the function will return an VCFHeader object (default), otherwise it will return an DataFrame.

Details
This function requests GET host/variantsets/variantSetId.

Value
DataFrame object. It can be converted into VCFHeader object.

See Also
DataFrame, searchVariantSets, VCFHeader, makeVCFHeaderFromGA4GHResponse

Examples
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrow = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrow = 1)$id
getVariantSet(host, variantSetId)

getVariantSet(host, variantSetId, asVCF = FALSE)
## End(Not run)
Description

This function follows the official reference HGVS nomenclature. At this moment, it supports only 'substitution' and 'indel' for DNA sequences.

Usage

HGVSnames(start, ref, alt, type = "g", seqnames = NA_character_)

Arguments

- start: genomic location of start
- ref: reference sequence
- alt: alternate sequence
- type: Sequence type to be used as prefix. Allowed options are:
  - g genomic (default);
  - m mitochondrial;
  - c coding DNA;
  - n non-coding DNA.
- seqnames: name of sequence (e.g. chr1, 1). It is optional.

Value

Genomic coordinates of variants formatted as HGVS nomenclature.

References

Sequence Variant Nomenclature.

Examples

```r
start <- c(45576, "88+1", 6775, 6775, 145, 9002, 4, 12345611, 58347698)
type <- c("g", "c", "g", "g", "c", "g", "g", "g", "g")
seqnames <- c("", ",", NA, NA, NA, NA, "chr11", NA)
HGVSnames(start, ref, alt, type, seqnames)
```
**listReferenceBases**  

**listReferenceBases function**

**Description**

Get the sequence bases of a reference genome by genomic range.

**Usage**

```r
listReferenceBases(host, referenceId, start = 1, end = NA_integer_)
```

**Arguments**

- `host` URL of GA4GH API data server.
- `referenceId` The ID of the Reference to be retrieved.
- `start` The start position (1-based) of this query. Defaults to 0. Genomic positions are non-negative integers less than reference length. Requests spanning the join of circular genomes are represented as two requests one on each side of the join (position 1).
- `end` The end position (1-based, inclusive) of this query. Defaults to the length of this Reference.

**Details**

This function requests POST host/listreferencebases.

**Value**

`BString` object.

**See Also**

- `searchReferenceSets`
- `searchReferences`

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/
## Not run:
referenceSetId <- searchReferenceSets(host, nrows = 1)$id
referenceId <- searchReferences(host, referenceSetId, nrows = 1)$id
listReferenceBases(host, referenceId, start = 1, end = 100)
## End(Not run)
```
makeVCFFromGA4GHResponse

Description
Convert DataFrame output from searchVariants and getVariant functions to VCF class.

Usage
makeVCFFromGA4GHResponse(variants)

Arguments
variants DataFrame generated by searchVariants.

Value
VCF object.

See Also
searchVariants, getVariant, VCF, DataFrame

Examples
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 1)$id
variants <- searchVariants(host, variantSetId, referenceName = "1",
start = 15000, end = 16000)
variants
makeVCFFromGA4GHResponse(variants)
## End(Not run)

makeVCFHeaderFromGA4GHResponse

Description
Convert DataFrame output from getVariantSet function to VCFHeader class.
searchBiosamples

Usage

makeVCFHeaderFromGA4GHResponse(variantSet)

Arguments

variantSet DataFrame generated by `getVariantSet` function.

Value

VCFHeader object.

See Also

getVariantSet, VCFHeader, DataFrame

Examples

```r
host <- "http://1kgenomes.ga4gh.org/
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 1)$id
variantId <- searchVariants(host, variantSetId, "1", 15031, 15031)$id
variant <- getVariant(host, variantId)

makeVCFFromGA4GHResponse(variant)

## End(Not run)
```

searchBiosamples

`searchBiosamples` function

Description

This function gets Biosamples matching the search criteria.

Usage

```r
searchBiosamples(host, datasetId, name = NA_character_,
                  individualId = NA_character_, nrows = Inf, responseSize = NA_integer_)
```

Arguments

- **host**: URL of GA4GH API data server.
- **datasetId**: Id of the dataset to search.
- **name**: Returns Biosamples with the given name found by case-sensitive string matching.
- **individualId**: Returns Biosamples for the provided individual ID.
nrows  Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.

responseSize  Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details
This function requests to /biosamples/search.

Value
DataFrame object. NULL means no registry found.

References
Official documentation.

See Also
DataFrame, getBiosample

Examples
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
searchBiosamples(host, datasetId, nrows = 10)
## End(Not run)

searchCallSets  searchCallSets function

Description
Search for call sets (sample columns of VCF files).

Usage
searchCallSets(host, variantSetId, name = NA_character_,
biosampleId = NA_character_, nrows = Inf, responseSize = NA_integer_)
Arguments

- **host**: URL of GA4GH API data server.
- **variantSetId**: The VariantSet to search.
- **name**: Only return call sets with this name (case-sensitive, exact match).
- **biosampleId**: Return only call sets generated from the provided BioSample ID.
- **nrows**: Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this parameter, the function will silently return only the available entries.
- **responseSize**: Specifies the number of entries to be returned by the server until reach the number of rows defined in `nrows` parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests `POST host/callsets/search`.

Value

- **DataFrame** object.

See Also

- `DataFrame`, `getCallSet`

Examples

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 1)$id
searchCallSets(host, variantSetId)
## End(Not run)
```
Usage

searchDatasets(host, nrows = Inf, responseSize = NA_integer_)

Arguments

host  URL of GA4GH API data server.
nrows Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this parameter, the function will silently return only the available entries.
responseSize Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests to POST /datasets/search.

Value

DataFrame object. NULL means no registry found.

See Also

DataFrame, getDataset

Examples

host <- "http://1kgenomes.ga4gh.org/"
## Not run:
searchDatasets(host)
## End(Not run)

searchExpressionLevels

searchExpressionLevels function

Description

This function gets expression levels matching the search criteria.
Usage

searchExpressionLevels(host, rnaQuantificationId, nrows = Inf,
responseSize = NA_integer_)

Arguments

host URL of GA4GH API data server.
rnaQuantificationId Id of the rnaQuantification to restrict search to.
nrows Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
responseSize Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests to /expressionlevels/search.

Value

Dataframe object. NULL means no registry found.

References

Official documentation.

See Also

DataFrame, getExpressionLevel, searchRnaQuantificationSets

Examples

host <- "http://1kgenomes.ga4gh.org/
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
rnaQuantificationSetId <- searchRnaQuantificationSets(host, datasetId, nrow = 1)$id
rnaQuantificationId <- searchRnaQuantifications(host, rnaQuantificationSetId, nrows = 1)$id
searchExpressionLevels(host, rnaQuantificationId, nrows = 10)
## End(Not run)
searchFeatures

**Description**

Search for features (lines of genomic feature files).

**Usage**

```r
searchFeatures(host, featureSetId, name = NA_character_,
               geneSymbol = NA_character_, parentId = NA_character_,
               referenceName = NA_character_, start = NA_integer_, end = NA_integer_,
               featureTypes = character(), nrows = Inf, responseSize = NA_integer_)
```

**Arguments**

- **host**
  - URL of GA4GH API data server.
- **featureSetId**
  - The annotation set to search within. Either featureSetId or parentId must be non-empty.
- **name**
  - Only returns features with this name (case-sensitive, exact match).
- **geneSymbol**
  - Only return features with matching the provided gene symbol (case-sensitive, exact match). This field may be replaced with a more generic representation in a future version.
- **parentId**
  - Restricts the search to direct children of the given parent feature ID. Either featureSetId or parentId must be non-empty.
- **referenceName**
  - Only return features on the reference with this name (matched to literal reference name as imported from the GFF3).
- **start**
  - Required, if name or symbol not provided. The beginning of the window (0-based, inclusive) for which overlapping features should be returned. Genomic positions are non-negative integers less than reference length. Requests spanning the join of circular genomes are represented as two requests one on each side of the join (position 0).
- **end**
  - Required, if name or symbol not provided. The end of the window (0-based, exclusive) for which overlapping features should be returned.
- **featureTypes**
  - TODO: To be replaced with a fully featured ontology search once the Metadata definitions are rounded out. If specified, this query matches only annotations whose feature_type matches one of the provided ontology terms.
- **nrows**
  - Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
- **responseSize**
  - Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing
searchFeatureSets

this the value of this parameter will reduce the number of requests and reducing
the time required. The will not respect this parameter if the value if larger than
its maximum response size.

Details

This function requests POST host/features/search.

Value

DataFrame object.

References

Official documentation.

DataFrame, getFeature

Examples

host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
featureSetId <- searchFeatureSets(host, datasetId, nrows = 1)$id
searchFeatures(host, featureSetId, nrows = 10)

## End(Not run)

searchFeatureSets searchFeatureSets function

Description

Search for feature sets (genomic features, e.g. GFF files).

Usage

searchFeatureSets(host, datasetId, nrows = Inf, responseSize = NA_integer_)

Arguments

host URL of GA4GH API data server.
datasetId The Dataset to search.
nrows Number of rows of the data frame returned by this function. If not defined, the
function will return all entries. If the number of available entries is less than the
value of this this parameter, the function will silently return only the available
entries.
searchIndividuals

responseSize Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests POST host/featuresets/search.

Value

DataFrame object.

References

Official documentation.

searchIndividuals  searchIndividuals function

Description

This function gets individuals matching the search criteria.

Usage

searchIndividuals(host, datasetId, name = NA_character_, nrows = Inf, responseSize = NA_integer_)
Arguments

- **host**: URL of GA4GH API data server.
- **datasetId**: Id of the dataset to search.
- **name**: Returns Individuals with the given name found by case-sensitive string matching.
- **nrows**: Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this parameter, the function will silently return only the available entries.
- **responseSize**: Specifies the number of entries to be returned by the server until reach the number of rows defined in `nrows` parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests to `/individuals/search`.

Value

- **DataFrame** object. NULL means no registry found.

References

Official documentation.

See Also

Examples

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
searchIndividuals(host, datasetId, nrows = 10)
## End(Not run)
```
**searchPhenotypeAssociations**

**searchPhenotypeAssociations function**

**Description**

This function gets a list of phenotype associations matching the search criteria.

**Usage**

```r
searchPhenotypeAssociations(host, phenotypeAssociationSetId, 
featureIds = character(), phenotypeIds = character(), nrows = Inf, 
responseSize = NA_integer_)
```

**Arguments**

- `host` URL of GA4GH API data server.
- `phenotypeAssociationSetId` Id of the PhenotypeAssociationSet to search.
- `featureIds` Ids of the features. At least one featureId or phenotypeId must be provided.
- `phenotypeIds` Ids of the phenotypes. At least one featureId or phenotypeId must be provided.
- `nrows` Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this parameter, the function will silently return only the available entries.
- `responseSize` Specifies the number of entries to be returned by the server until reach the number of rows defined in `nrows` parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

**Details**

This function requests to /featurephenotypeassociations/search.

**Value**

- `DataFrame` object. NULL means no registry found.

**References**

- Official documentation.
searchPhenotypeAssociationSets

See Also

DataFrame, searchPhenotypeAssociationSets

Examples

host <- "http://1kgenomes.ga4gh.org/
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
id <- searchPhenotypeAssociationSets(host, datasetId, nrows = 1)$id
searchPhenotypeAssociations(host, id, nrows = 10)
## End(Not run)

Description

This function gets a list of association sets matching the search criteria.

Usage

searchPhenotypeAssociationSets(host, datasetId, nrows = Inf,
responseSize = NA_integer_)

Arguments

host URL of GA4GH API data server.
datasetId Id of the dataset to search.
nrows Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
responseSize Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests to /phenotypeassociationsets/search.

Value

DataFrame object. NULL means no registry found.
searchReadGroupSets

**searchReadGroupSets function**

**Description**

Search for read group sets (sequence alignment, e.g BAM files).

**Usage**

```
searchReadGroupSets(host, datasetId, name = NA_character_,
                    biosampleId = NA_character_, nrows = Inf, responseSize = NA_integer_)
```

**Arguments**

- **host** URL of GA4GH API data server.
- **datasetId** The dataset to search.
- **name** Only return read group sets with this name (case-sensitive, exact match).
- **biosampleId** Specifying the id of a BioSample record will return only readgroups with the given biosampleId.
- **nrows** Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
- **responseSize** Specifies the number of entries to be returned by the server until reach the number of rows defined in `nrows` parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.
**searchReads**

**Details**

This function requests POST `host/readgroupsets/search`

**Value**

*DataFrame* object.

**See Also**

*DataFrame, getReadGroupSet*

**Examples**

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
searchReadGroupSets(host, datasetId, nrows = 1)
## End(Not run)
```

---

**searchReads**

**searchReads function**

**Description**

Search for reads by genomic range (bases of aligned sequences)

**Usage**

```r
searchReads(host, readGroupIds, referenceId = NA_character_,
start = NA_integer_, end = NA_integer_, nrows = Inf,
responseSize = NA_integer_)
```

**Arguments**

- **host** URL of GA4GH API data server.
- **readGroupIds** The ReadGroups to search. At least one id must be specified.
- **referenceId** The reference to query. Leaving blank returns results from all references, including unmapped reads - this could be very large.
- **start** The start position (1-based) of this query. If a reference is specified, this defaults to 0. Genomic positions are non-negative integers less than reference length. Requests spanning the join of circular genomes are represented as two requests one on each side of the join (position 1).
- **end** The end position (1-based, exclusive) of this query. If a reference is specified, this defaults to the reference’s length.
searchReferences

nrows  Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.

responseSize  Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests POST host/reads/search.

Value

*DataFrame* object.

References

Official documentation.

See Also

*DataFrame*

Examples

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
readGroupIds <- "WyIxa2dlbm9tZXMiLCJyZ3MiLCJIRzAzMjcwIiwiRVJSMTgxMzI5I10"
referenceSetId <- searchReferenceSets(host, nrows = 1)$id
referenceId <- searchReferences(host, referenceSetId, nrows = 1)$id
searchReads(host, readGroupIds, referenceId, start = 15000, end = 16000)
## End(Not run)
```

searchReferences  *searchReferences function*

Description

Search for references (genome sequences, e.g. chromosomes).

Usage

```r
searchReferences(host, referenceSetId, md5checksum = NA_character_,
                 accession = NA_character_, nrows = Inf, responseSize = NA_integer_)
```
Arguments

- **host** URL of GA4GH API data server.
- **referenceSetId** The ReferenceSet to search.
- **md5checksum** If specified, return the references for which the md5checksum matches this string (case-sensitive, exact match). See ReferenceSet::md5checksum for details.
- **accession** If specified, return the references for which the accession matches this string (case-sensitive, exact match).
- **nrows** Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
- **responseSize** Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests POST host/references/search.

Value

## End(Not run)
```
searchReferenceSets  

**searchReferenceSets function**

**Description**

Search for reference sets (reference genomes).

**Usage**

```r
searchReferenceSets(host, md5checksum = NA_character_,
accession = NA_character_, assemblyId = NA_character_, nrows = Inf,
responseSize = NA_integer_)
```

**Arguments**

- **host**: URL of GA4GH API data server.
- **md5checksum**: If unset, return the reference sets for which the md5checksum matches this string (case-sensitive, exact match). See ReferenceSet::md5checksum for details.
- **accession**: If unset, return the reference sets for which the accession matches this string (case-sensitive, exact match).
- **assemblyId**: If unset, return the reference sets for which the assemblyId matches this string (case-sensitive, exact match).
- **nrows**: Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
- **responseSize**: Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

**Details**

This function requests POST host/references/search.

**Value**

- **DataFrame** object.

searchRnaQuantifications

searchRnaQuantifications function

Description

This function gets a list of RnaQuantifications matching the search criteria.

Usage

searchRnaQuantifications(host, rnaQuantificationSetId, 
biosampleId = NA_character_, nrows = Inf, responseSize = NA_integer_)

Arguments

host URL of GA4GH API data server.
rnaQuantificationSetId
Return only Rna Quantifications which belong to this set.
biosampleId Return only RNA quantifications regarding the specified biosample.
nrows Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
responseSize Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests to /rnaquantifications/search.

searchRnaQuantificationSets

Description

This function gets a list of RNA quantification sets matching the search criteria.

Usage

searchRnaQuantificationSets(host, datasetId, nrows = Inf,
responseSize = NA_integer_)

Arguments

  host            URL of GA4GH API data server.
  datasetId      Id of the dataset to search.
  nrows           Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
  responseSize    Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.
searchVariantAnnotations

Details
This function requests to /rnaquantificationsets/search.

Value
Dataframe object. NULL means no registry found.

References
Official documentation.

See Also
DataFrame, getRnaQuantificationSet

Examples
host <- "http://1kgenomes.ga4gh.org/
## Not run:
  datasetId <- searchDatasets(host, nRows = 1)$id
  searchRnaQuantificationSets(host, datasetId, nRows = 1)

## End(Not run)

Description
Search for annotated variants by genomic range.

Usage
searchVariantAnnotations(host, variantAnnotationSetId, referenceName = NA_character_, referenceId = NA_character_, start = NA_integer_, end = NA_integer_, effects = list(), nRows = Inf, responseSize = NA_integer_)

Arguments
host URL of GA4GH API data server.
variantAnnotationSetId Required. The ID of the variant annotation set to search over.
referenceName Only return variants with reference alleles on the reference with this name. One of this field or reference_id is required.
referenceId Only return variants with reference alleles on the reference with this ID. One of this field or reference_name is required.
start

Required if reference_name or reference_id supplied. The beginning of the window (1-based, inclusive) for which variants with overlapping reference alleles should be returned. Genomic positions are non-negative integers less than reference length. Requests spanning the join of circular genomes are represented as two requests one on each side of the join (position 1).

dend

Required if reference_name or reference_id supplied. The end of the window (1-based, exclusive) for which variants with overlapping reference alleles should be returned.

effects

This filter allows variant, transcript combinations to be extracted by effect type(s). Only return variant annotations including any of these effects and only return transcript effects including any of these effects. Exact matching across all fields of the Sequence Ontology OntologyTerm is required. (A transcript effect may have multiple SO effects which will all be reported.) If empty, return all variant annotations.

nrows

Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.

responseSize

Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

Details

This function requests POST host/variantannotations/search.

Value

DataFrame object.

id <- searchVariantAnnotationSets(host, variantSetId, nrows = 1)$id
searchVariantAnnotations(host, variantAnnotationSetId = id,
## searchVariantAnnotationSets

### searchVariantAnnotationSets function

#### Description

Search for variant annotation sets (annotated VCF files).

#### Usage

```
searchVariantAnnotationSets(host, variantSetId, nrows = Inf, responseSize = NA_integer_)
```

#### Arguments

- `host` : URL of GA4GH API data server.
- `variantSetId` : Required. The VariantSet to search.
- `nrows` : Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this parameter, the function will silently return only the available entries.
- `responseSize` : Specifies the number of entries to be returned by the server until reach the number of rows defined in `nrows` parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.

#### Details

This function maps to POST host/variantannotationsets/search.

#### Value

`DataFrame` object.

#### References

- Official documentation.

#### See Also

`DataFrame`
Examples

```r
host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 2)$id[2]
searchVariantAnnotationSets(host, variantSetId)
## End(Not run)
```

searchVariants (searchVariants function)

Description

Search for variants by genomic ranges (lines of VCF files).

Usage

```
searchVariants(host, variantSetId, referenceName, start, end,
              callSetIds = character(), nrows = Inf, responseSize = NA_integer_,
asVCF = TRUE)
```

Arguments

- `host`: URL of GA4GH API data server.
- `variantSetId`: The variant set to search.
- `referenceName`: Required. Only return variants on this reference.
- `start`: Required. The beginning of the window (1-based, inclusive) for which overlapping variants should be returned. Genomic positions are non-negative integers less than reference length. Requests spanning the join of circular genomes are represented as two requests one on each side of the join (position 1).
- `end`: Required. The end of the window (1-based, inclusive) for which overlapping variants should be returned.
- `callSetIds`: Only return variant calls which belong to callsets with these IDs. If unspecified, return all variants and no variant call objects.
- `nrows`: Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this this parameter, the function will silently return only the available entries.
- `responseSize`: Specifies the number of entries to be returned by the server until reach the number of rows defined in `nrows` parameter or until get all available entries. If not defined, the server will return the allowed maximum response size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.
- `asVCF`: If TRUE the function will return an VCF with header (default), otherwise it will return an DataFrame.
**searchVariantsByGRanges**

**Details**

This function maps to POST host/variants/search.

**Value**

VCF object (when asVCF = TRUE) or DataFrame object (otherwise).

**References**

Official documentation.

**Examples**

```r
code

host <- "http://1kgenomes.ga4gh.org/"
## Not run:
datasetId <- searchDatasets(host, nrows = 1)$id
variantSetId <- searchVariantSets(host, datasetId, nrows = 1)$id
searchVariants(host, variantSetId, referenceName = "1",
               start = 15000, end = 16000)

searchVariants(host, variantSetId, referenceName = "1",
               start = 15000, end = 16000, asVCF = FALSE)
## End(Not run)
```

---

**searchVariantsByGRanges**

**searchVariantsByGRanges function**

**Description**

Search for variants by genomic ranges (lines of VCF files)

**Usage**

```r
searchVariantsByGRanges(host, variantSetId, granges, callSetIds = character(),
                         nrows = Inf, responseSize = NA_integer_, asVCF = FALSE)
```
**Arguments**

- **host**: URL of GA4GH API data server.
- **variantSetId**: The variant set to search.
- **granges**: A GRanges object containing one or more genomic ranges.
- **callSetIds**: Only return variant calls which belong to callsets with these IDs. If unspecified, return all variants and no variant call objects.
- **nrows**: Number of rows of the data frame returned by this function. If not defined, the function will return all entries. If the number of available entries is less than the value of this parameter, the function will silently return only the available entries.
- **responseSize**: Specifies the number of entries to be returned by the server until reach the number of rows defined in nrows parameter or until get all available entries. If not defined, the server will return the allowed maximum reponse size. Increasing this the value of this parameter will reduce the number of requests and reducing the time required. The will not respect this parameter if the value if larger than its maximum response size.
- **asVCF**: If TRUE the function will return a list of VCF object with headers (default), otherwise it will return a list of DataFrame objects.

**Details**

This function maps to the body of POST host/variants/search.

**Value**

List of VCF objects (when asVCF = TRUE) or a list of DataFrame objects (otherwise). Each row in GRanges object will be a element of the list.

**References**

Official documentation.
