Package ‘HarmonizR’

May 27, 2024

Title  Handles missing values and makes more data available

Version  1.2.0

Description  An implementation, which takes input data and makes it available
for proper batch effect removal by ComBat or Limma. The implementation appropriately
handles missing values by dissecting the input matrix into smaller matrices
with sufficient data to feed the ComBat or limma algorithm. The adjusted
data is returned to the user as a rebuild matrix. The implementation is
meant to make as much data available as possible with minimal data loss.

Depends  R (>= 4.2.0)
Licenses  GPL-3

Encoding  UTF-8

Roxygen  list(markdown = TRUE)

RoxygenNote  7.2.3

biocViews  BatchEffect

Imports  doParallel (>= 1.0.16), foreach (>= 1.5.1), janitor (>=
2.1.0), plyr (>= 1.8.6), sva (>= 3.36.0), seriation (>= 1.3.5),
limma (>= 3.46.0), SummarizedExperiment

Suggests  knitr, rmarkdown, testthat (>= 3.0.0)

VignetteBuilder  knitr

binary_matrix_reduction

Creating a binary existence matrix

Description

This function reduces its input matrix to a binary existence matrix based on the given description file (and information on how many values a batch needs) for proper adjustment.

Usage

binary_matrix_reduction(binary_data, batch_list, needed_values)

Arguments

binary_data The input data.frame that should become binary.
batch_list Information about the sample’s batch affiliations.
needed_values Information, how many values are needed to render a a batch 'valid'.

Value

A binary existence matrix returned as a data.frame
blocking

**Blocking**

**Description**
This function performs blocking on the given description and therefore influences how the dataset will be split later down the pipeline.

**Usage**
`blocking(batch_list, block)`

**Arguments**
- `batch_list`  The list with information about batch-affiliations for every sample.
- `block`  The blocking parameter (how many batches should always get blocked together).

**Value**
Returns an updated 'batch_list' with blocking included

---

**build_key_list**  

**Creation of keys**

**Description**
Calculates a list of usable keys based on the passed batch listings

**Usage**
`build_key_list(batch_list)`

**Arguments**
- `batch_list`  The list with information about batch-affiliations for every sample.

**Value**
A list element with usable keys
fetch_batch_overview  Fetching batch list

Description
The fetch_batch_overview function extracts the overview over the batch distribution in list format.

Usage
fetch_batch_overview(batch_data)

Arguments
batch_data  This is a data.frame and simultaneously the result from read_description()

Value
Batch distribution as list

find_na  Finding NAs for the sorting process

Description
Creates an overview of NAs based on both the passed input data.frame and the batch list

Usage
find_na(df, batch_list)

Arguments
df  The data.frame passed initially by the user.
batch_list  The list with information about batch-affiliations for every sample.

Value
An overview of the NA-distribution
**format_from_S4**  
*Format data taken from S4*

**Description**  
This function converts passed S4 summarized experiment data to HarmonizR input

**Usage**  
`format_from_S4(data)`

**Arguments**
- `data`  
  Data (S4 format) passed by the user. No description file is needed when using S4 data

**Value**  
Data and description as data.frames

---

**format_to_s4**  
*Format data taken from HarmonizR back to S4*

**Description**  
This function converts passed HarmonizR output to a S4 summarized experiment data structure

**Usage**  
`format_to_s4(cured_data, s4_saved)`

**Arguments**
- `cured_data`  
  The HarmonizR output
- `s4_saved`  
  The original S4 input

**Value**  
The HarmonizR output formatted as S4 data
harmonizR

Main function

Description

This function executes the entire HarmonizR program and executes all other functions found in this package. Therefore, this is the only function in need of calling.

Usage

harmonizR(
  data_as_input = NULL,
  description_as_input = NULL,
  ..., 
  algorithm = "ComBat",
  ComBat_mode = 1,
  plot = FALSE,
  sort = FALSE,
  block = NULL,
  output_file = "cured_data",
  verbosity = 1,
  cores = FALSE,
  ur = TRUE
)

Arguments

data_as_input Path to input data. Additionally, the input can be a data.frame with proper row- and column names.
description_as_input Path to input description. Additionally, the input can be a data.frame with three columns total.
... Unsettable parameter. Used to make all parameters below optional. Documented to adhere with Bioconductor guidelines.
algorithm Optional. Pass either "ComBat" or "limma" to select the preferred adjustment method. Defaults to ComBat.
ComBat_mode Optional. Pass a number between 1 and 4 to select the desired ComBat parameters. Can only be set when ComBat is used. For information on the meaning of the numbers, please view the SOP. Defaults to 1.
plot Optional. Takes either "samplemeans" for sample specific means, "feature-means" for feature specific means or "CV" for the coefficient of variation as input and creates before/after plots for the given data. When set, additionally writes out a .pdf file. Defaults to FALSE => Turned off.
sort Optional. Method to sort by. Either FALSE or "sparsity_sort", "seriation_sort" or "jaccard_sort".
block
Optional. How many batches should be treated as one during blocking. Greatly affects the number of sub-dataframes produced and reduces runtime. Turned off by default.

output_file
Optional. Takes a string as input for the .tsv file name. This can also be a path. Defaults to "cured_data", hence yielding a "cured_data.tsv" file in the work directory from which it was called. Can be turned off by passing FALSE.

verbosity
Optional. Toggles the amount of information printed out by the HarmonizR algorithm during execution. Takes a number from 0 (also "mute") to any positive number. The higher, the more information will be printed. For the standard user, anything above 2 is rarely needed. Defaults to 1.

cores
Optional. Manually sets the number of cores the user wants to be used during HarmonizR's execution. Takes a positive integer. Defaults to the amount of available cores.

ur
Optional. Toggles the functionality of the removal of unique combinations for increased data rescue. Defaults to TRUE. Not recommended to set to FALSE, as it exists for testing and reproducibility purposes.

Value
The batch effect adjusted data.frame. Additionally, a .tsv file by default called "cured_data.tsv" will be written out as a result.

Examples

```r
# create a dataframe with 3 rows and 6 columns filled with random numbers
df <- data.frame(matrix(rnorm(n = 3*6), ncol = 6))
# set the column names
colnames(df) <- c("A", "B", "C", "D", "E", "F")
# create a vector of row names
row_names <- c("F1", "F2", "F3")
# set the row names
rownames(df) <- row_names

# create a vector of batch numbers
batch <- rep(1:3, each = 2)
# create a dataframe with 6 rows and 3 columns
des <- data.frame(ID = colnames(df), sample = 1:6, batch = batch)

# use the harmonizR() function; turning off creation of an output .tsv file
harmonizR(df, des, output_file = FALSE, cores = 1)
```

---

**jaccard**

**Jaccard-based sorting**

**Description**

Calculates a order to sort by based on the Jaccard similarity of all given batches.
jaccard_index_existence

Usage
jaccard(binary_df)

Arguments
binary_df The input matrix passed by the user reduced to presence and absence of features in batches (binary)

Value
A template for batch-sorting based on Jaccard similarity

jaccard_index_absence Jaccard index on zeroes (absence)

Description
Calculates the Jaccard index for two given lists a and b based on common zeroes

Usage
jaccard_index_absence(a, b)

Arguments

a First list with either 0 or 1 entries to be compared against the second list.
b Second list with either 0 or 1 entries to be compared against the first list.

Value
The Jaccard similarity based on absent values

jaccard_index_existence Jaccard index on ones (existence)

Description
Calculates the Jaccard index for two given lists a and b based on common ones

Usage
jaccard_index_existence(a, b)
**read_description**

**Arguments**

a  First list with either 0 or 1 entries to be compared against the second list.

b  Second list with either 0 or 1 entries to be compared against the first list.

**Value**

The Jaccard similarity based on existing values

---

**read_main_data**

**Description**

The read_main_data function reads in a file via its file path and converts it to a for the rest of the workflow readable format.

**Usage**

```r
read_main_data(data_source)
```

**Arguments**

data_source  Usually the path to the input data. It can also be passed directly as a correctly formatted data.frame.
**Value**

To-be-adjusted data as data.frame

---

**rebuild**

*Rebuilding*

**Description**

The rebuild function rebuilds the sub-dataframes to one big output data.frame.

**Usage**

`rebuild(cured_subdfs)`

**Arguments**

- `cured_subdfs` a list of data.frames, which are the result from splitting().

**Value**

The rebuild() function returns the adjusted data.frame and writes out cured_data.tsv

---

**sorting**

*Sorting the input data.frame*

**Description**

Creates an overview of NAs based on both the passed input data.frame and the batch list.

**Usage**

`sorting(df, batch_list, batch_data, order_to_go_by, verbosity)`

**Arguments**

- `df` The data.frame passed initially by the user.
- `batch_list` The list with information about batch-affiliations for every sample.
- `batch_data` The full data.frame passed as description by the user.
- `order_to_go_by` The template to sort by.
- `verbosity` Toggles the amount of information printed out by the HarmonizR algorithm during execution. Passed on from the main function.

**Value**

Correctly sorted data and description as two elements of a list
splitting

splitting  Splitting

Description
This function splits the data.frame. The data is very sensitive to its specific input. Only to be called via harmonizR()

Usage
splitting(
  affiliation_list,
  main_data,
  batch_data,
  block_list,
  algorithm,
  ComBat_mode,
  block,
  verbosity,
  cores
)

Arguments
affiliation_list  An overview of which protein has which missing value distribution.
main_data  This is the input data.frame read in by the HarmonizR.
batch_data  This is the description data.frame read in by the HarmonizR.
block_list  An overview of the batch groupings in list form. If the block parameter was used, the groupings are changed accordingly.
algorithm  Either "ComBat" or "limma". Based on the selected algorithm for the harmonizR() function. Not active during limma execution.
ComBat_mode  The chosen ComBat mode influences the parameters the ComBat algorithm is using. Based on the ComBat_mode parameter given to the harmonizR() function. Not active during limma execution.
block  The block parameter is here used to determine whether there are single-batch dataframes at all present.
verbosity  Toggles the amount of stuff printed out by the HarmonizR algorithm during execution.
cores  Manually sets the number of cores the user wants to be used during HarmonizR’s execution. A positive integer.

Value
Returns a list of `chopped up` data.frames
spotting_missing_values

Description

This function spots missing values within the given data.frame.

Usage

spotting_missing_values(
  main_data,
  batch_list,
  block_list,
  needed_values,
  verbosity
)

Arguments

main_data                  This is the input data.frame read in by the HarmonizR.
batch_list                An overview of the batch groupings in list form (comes from the user).
block_list                An overview of the batch groupings in list form (comes from the blocking function). If blocking is FALSE, this list will be the same as 'batch_list'.
needed_values             The number of values needed to be present in a batch in order to be valid.
verbosity                 Toggles the amount of stuff printed out by the HarmonizR algorithm during execution.

Value

A list of vectors to pass to the upcoming splitting() function.

unique_removal

Remove unique combinations

Description

The unique_removal function changes the gathered information of the features in a way that guarantees no single-line sub-dataframes to appear, causing less data loss.

Usage

unique_removal(affiliation_list)
### visual

**Arguments**

affiliation_list

An overview of which protein has which missing value distribution.

**Value**

Updated version of the passed affiliation_list

---

### visual

**Visualize feature means**

**Description**

The visual functions turn their input dataframes into easily plottable results.

**Usage**

```r
visual(input_dataframe, batch_list)
```

**Arguments**

input_dataframe

A data.frame object as input.

batch_list

A list object giving information about which column corresponds to which batch.

**Value**

A data.frame object, which is ready to be plotted

---

### visual2

**Visualize sample means**

**Description**

The visual functions turn their input dataframes into easily plottable results.

**Usage**

```r
visual2(input_dataframe, batch_list)
```

**Arguments**

input_dataframe

A data.frame object as input.

batch_list

A list object giving information about which column corresponds to which batch.
visual3

**Value**

A data.frame object, which is ready to be plotted

---

**visual3**  
*Visualize CV*

---

**Description**

The visual functions turn their input dataframes into easily plottable results.

**Usage**

`visual3(input_dataframe, batch_list)`

**Arguments**

- **input_dataframe**  
  A data.frame object as input.

- **batch_list**  
  A list object giving information about which column corresponds to which batch.

**Value**

A data.frame object, which is ready to be plotted
