Package ‘MGFM’

January 18, 2024

Type  Package
Title  Marker Gene Finder in Microarray gene expression data
Version  1.36.0
Date  2014-09-21
Author  Khadija El Amrani
Maintainer  Khadija El Amrani <khadija.el-amrani@charite.de>
Description  The package is designed to detect marker genes from Microarray gene expression data sets
Depends  AnnotationDbi, annotate
Suggests  hgu133a.db
biocViews  Genetics, GeneExpression, Microarray
License  GPL-3
LazyData  yes
git_url  https://git.bioconductor.org/packages/MGFM
git_branch  RELEASE_3_18
git_last_commit  8240478
git_last_commit_date  2023-10-24
Repository  Bioconductor 3.18
Date/Publication  2024-01-18

1
**Description**

The package is designed to detect marker genes from microarray gene expression data sets.

**Details**

- **Package:** MGFM
- **Type:** Package
- **Version:** 1.2.0
- **Date:** 2014-08-13
- **License:** GPL-3

**Author(s)**

Khadija El Amrani
Maintainer: Khadija El Amrani <khadija.el-amrani@charite.de>

**ds2.mat**

**Microarray gene expression data set**

**Description**

Microarray gene expression data set derived from 5 tissue types (lung, liver, heart, kidney, and brain) from two GEO Series GSE1133 and GSE2361. Each tissue type is represented by 3 replicates.

**Usage**

data(ds2.mat)

**Format**

A matrix with 22283 probe sets and 15 samples.

**Details**

The data consist of the following samples: GSM44702, GSM18953, GSM18954, GSM44704, GSM18949, GSM18950, GSM44690, GSM18921, GSM18922, GSM44675, GSM18955, GSM18956, GSM44671, GSM18951, GSM18952
**getHtmlpage**

**Value**

- microarray data matrix

**Examples**

```r
data(ds2.mat)
```

---

**getHtmlpage**

*Function to build HTML pages to show marker genes*

**Description**

Function to build HTML pages to show marker genes

**Usage**

```r
getHtmlpage(markers.list, chip, directory=getwd())
```

**Arguments**

- `markers.list`: List of marker genes, returned by the function `getMarkerGenes`.
- `chip`: Chip name.
- `directory`: Path to the directory where to save the html pages.

**Details**

This function is based on the function `htmlpage` from the R-package 'annotate'.

**Value**

This function is used only for the side effect of creating HTML tables.

**Author(s)**

Khadija El Amrani <khadija.el-amrani@charite.de>

**Examples**

```r
data("ds2.mat")
res.list <- getMarkerGenes(ds2.mat, samples2compare="all", annotate=TRUE, chip="hgu133a", score.cutoff=1)
getHtmlpage(res.list, chip="hgu133a", directory=getwd())
```
getMarkerGenes

Marker Gene Detection

Description

Function to detect marker genes using microarray gene expression data sets.

Usage

getMarkerGenes(data.mat, samples2compare="all", annotate=TRUE, chip=NULL, score.cutoff=1)

Arguments

data.mat The microarray data matrix with probe sets corresponding to rows and samples corresponding to columns.
samples2compare A character vector with the sample names to be compared (e.g. c("liver", "lung", "brain")). By default all samples are used.
annotate A boolean value. If TRUE the gene symbol and the entrez gene id are shown.
chip A chip name.
score.cutoff A value in the interval [0,1] to filter the markers according to the specificity score. The default value is 1 (no filtering).

Details

For each marker in the output list, the probe set and the corresponding score are shown. If annotate is TRUE, the gene symbol and the entrez gene id are shown. The score is used to rank the markers according to their specificity. The score values range from 0 to 1. Values near 0 would indicate high specificity and large values closer to 1 would indicate low specificity.

Value

A list with marker genes associated with each sample type.

Author(s)

Khadija El Amrani <khadija.el-amrani@charite.de>

Examples

data("ds2.mat")
res.list <- getMarkerGenes(ds2.mat, samples2compare="all", annotate=TRUE, chip="hgu133a", score.cutoff=1)
names(res.list)
## show the first 20 markers of liver
res.list[["liver_markers"]][1:20]
## Internal MGFM Functions

### Description

Internal MGFM functions

### Details

These are not intended to be called by the user.
