Package ‘SIMD’

May 8, 2024

Type Package

Title Statistical Inferences with MeDIP-seq Data (SIMD) to infer the methylation level for each CpG site

Version 1.22.0

Author Yan Zhou

Maintainer Jiadi Zhu <2160090406@email.szu.edu.cn>

Description This package provides a inferential analysis method for detecting differentially expressed CpG sites in MeDIP-seq data. It uses statistical framework and EM algorithm, to identify differentially expressed CpG sites. The methods on this package are described in the article 'Methylation-level Inferences and Detection of Differential Methylation with Medip-seq Data' by Yan Zhou, Jiadi Zhu, Mingtao Zhao, Baoxue Zhang, Chunfu Jiang and Xiyan Yang (2018, pending publication).

SIMD-package  A method to infer the methylation expression level for each CpG sites.

Description

SIMD is a package to infer the methylation expression level for each CpG sites. The main idea of SIMD is that by using statistical inference to with Medip-seq data method to infer the methylation level.

Author(s)

Zhou Yan Maintainer: Zhou Yan <zhouy1016@szu.edu.cn>

References

**all_CpGsite_bin_chr18**

A simulation dataset of CpG sites.

**Description**

This data set gives 2000 CpG sites which include the chromosome of the region, the start and the stop position of the CpG sites.

**Usage**

```r
all_CpGsite_bin_chr18
```

**Format**

A data.frame containing 2000 CpG sites.

**Source**

**References**

---

**classifypvalue**

*calculate P-value in code EMtest.*

**Description**

calculate P-value in code EMtest.

**Usage**

```r
classifypvalue(type1, type2, type3, type4, sm1chring1, sm1chring2, sm1chring3, sm1chring4, p, typelength, sm1chringlength, pvalue = rep(0, length(sm1chring1)))
```
Arguments

- type1: The first column of the first matrix.
- type2: The second column of the first matrix.
- type3: The third column of the first matrix.
- type4: The fourth column of the first matrix.
- sm1chring1: The first column of the second matrix.
- sm1chring2: The second column of the second matrix.
- sm1chring3: The third column of the second matrix.
- sm1chring4: The fourth column of the second matrix.
- p: P-value.
- typelength: The nrows of the first matrix.
- sm1chringlength: The nrows of the second matrix.
- pvalue: A vector, the length equals to the nrows of the second matrix.

Value

The probability.

EM2_H1ESB1_MeDIP_sigleCpG

A simulation dataset of MeDIP CpG sites.

Description

This data set gives 2000 CpG sites which include the chromosome of the region, the start and the stop position of the MeDIP CpG sites.

Usage

EM2_H1ESB1_MeDIP_sigleCpG

Format

A data.frame containing 2000 MeDIP CpG sites.

Source

References

EM2_H1ESB2_MeDIP_sigeCpG

Description

This data set gives 2000 CpG sites which include the chromosome of the region, the start and the stop position of the MeDIP CpG sites.

Usage

EM2_H1ESB2_MeDIP_sigeCpG

Format

A data.frame containing 2000 MeDIP CpG sites.

Source

References

EMalgorithm

EM algorithm to infer CpG sites.

Description

Using EM algorithm to infer the real number of CpG sites.

Usage

EMalgorithm(cpgsitefile, allcpgfile, category = "1", writefile = NULL, reportfile = NULL)

Arguments

cpgsitefile The path of file to store CpG site.
allcpgfile The file to store CpG sites.
category Default to "1".
writefile The path of output results. (If writefile=NULL, there will return the results back to main program.)
reportfile The path of output results.
Value

values or file If writefile is NULL, then return the values of results, otherwise output to write file.

Examples

datafile <- system.file("extdata", package="methylMnM")
data(example_data)
filepath <- datafile[1]
allcpgfile <- EM_H1ESB1_MeDIP_sigleCpG
dirwrite <- paste(setwd(getwd()), "/", sep="")
readshort <- paste(filepath, "/H1ESB1_MeDIP_18.extended.txt", sep="")
writefile <- paste(dirwrite, "EM2_H1ESB1_MeDIP_sigleCpG.bed", sep="")
reportfile <- paste(dirwrite, "EM2_H1ESB1_MeDIP_sigleCpG_report.bed", sep="")
f <- EMalgorithm(cpgsitefile=readshort, allcpgfile=allcpgfile, category="1",
writefile=writefile, reportfile=reportfile)

emalgth

Calculate the probability on condition that the sums equal to 1.

Description

Calculate the probability on condition that only a single CpG contributes to a short read.

Usage

emalgth(X)

Arguments

X A matrix about X, the elements in X takes values on 0,1 and satisfy the sums of each row equal to 1.

Value

y1 The probability when sums equal to 1.

Examples

set.seed(123)
d <- matrix(0, nrow=200, ncol=50)
random_num <- sample(1:50, 200, replace=TRUE)
for(i in 1:nrow(d)){
  d[i,random_num[i]]<-1
}
result <- emalgth(d)
head(result)
Calculate the probability on condition that the sums more than 1.

**Description**

Calculate the probability on condition that at least a CpG contributes to a short read.

**Usage**

```r
emalgth1(X)
```

**Arguments**

- `X` A matrix about X, the elements in X takes values on 0,1 and satisfy the sums of each row more than 1.

**Value**

- `y1` The probability when sums more than 1.

**Examples**

```r
set.seed(123)
d <- matrix(0, nrow=200, ncol=50)
random_num <- sample(1:10, 200, replace=TRUE)
for(i in 1:nrow(d)){
  temp <- sample(1:50, random_num[i], replace=FALSE)
  d[i,temp] <- 1
}
result <- emalgth1(d)
head(result)
```

**EMtest**

Inferring the methylation expression level of single sites.

**Description**

Using statistical framework and EM algorithm to infer the methylation expression level of single sites.

**Usage**

```r
EMtest(datafile = NULL, chrstring = NULL, cpgfile, mrecpgfile = NULL,
        writefile = NULL, reportfile = NULL, mreratio = 3/7, psd = 2,
        mkadded = 1, f = 1)
```
Arguments

datafile The files of sample. (datafile should be `cbind(data1, data2, data3, data4)`, where data1 and data2 are Medip-seq data, data3 and data4 are MRE-seq data).

chrstring The chromosome should be test.

cpgfile The file of all CpG number.

mrecpgfile The file of MRE-CpG number (If NULL, mrecpgfile will equal to cpgfile).

writefile The path of file of output result. (If writefile==NULL, there will return the results back to main program)

reportfile The path of output results of the number of bin, total reads before processing and total reads after processing.

mreratio The ratio of total unmethylation level with total methylation level (Defaulted mreratio is 3/7).

psd The parameters of pseudo count, which pseudo count added to Medip-seq and MRE-seq count.

mkadded Added to all CpG and MRE CpG (We set psd=2 and mkadded=1 as defaulted for robust).

f Adjustment weight, default to 1.

Value

values or file The output file "writefile" will own eleven columns, that is, "chr", "chrSt", "chrEnd", "Medip1", "Medip2", "MRE1", "MRE2", "cg", "mrecg", "pvalue" and "Ts". We also output a report file which will include parameters "s1/s2", "s3/s4", "N1", "N2", "N3", "N4", "c1", "c2", "Number of windows" and "Spend time".

Examples

data(example_data)
data1 <- EM2_H1ESB1_MeDIP_sigeCpG
data2 <- EM2_H1ESB2_MeDIP_sigeCpG
data3 <- H1ESB1_MRE_sigeCpG
data4 <- H1ESB2_MRE_sigeCpG
datafile <- cbind(data1, data2, data3, data4)
allcpg <- all_CpGsite_bin_chr18
mrecpg <- three_mre_cpg
dirwrite <- paste(setwd(getwd()), "/", sep="")
writefile <- paste(dirwrite, "pval_EM_H1ESB1_H1ESB21.bed", sep="")
reportfile <- paste(dirwrite, "report_pvalH1ESB1_H1ESB21.bed", sep="")
EMtest(datafile=datafile, chrstring=NULL, cpgfile=allcpg,
mrecpgfile=mrecpg, writefile=writefile, reportfile=reportfile,
mreratio=3/7, psd=2, mkadded=1, f=1)
**EM\_H1ESB1\_MeDIP\_sigleCpG**

*A simulation dataset of MeDIP CpG sites.*

---

**Description**

This data set gives 2000 CpG sites which include the chromosome of the region, the start and the stop position of the MeDIP CpG sites.

**Usage**

EM\_H1ESB1\_MeDIP\_sigleCpG

**Format**

A data.frame containing 2000 MeDIP CpG sites.

**Source**

---

**H1ESB1\_MRE\_sigleCpG**

*A simulation dataset of MRE CpG sites.*

---

**Description**

This data set gives 2000 CpG sites which include the chromosome of the region, the start and the stop position of the MRE CpG sites.

**Usage**

H1ESB1\_MRE\_sigleCpG

**Format**

A data.frame containing 2000 MRE CpG sites.
Source

References

H1ESB2_MRE_sigeCpG  A simulation dataset of MRE CpG sites.

Description

This data set gives 2000 CpG sites which include the chromosome of the region, the start and the stop position of the MRE CpG sites.

Usage

H1ESB2_MRE_sigeCpG

Format

A data.frame containing 2000 MRE CpG sites.

Source

References

probBinom

__probBinom__

**Compute P-values for Medip-seq and MRE-seq data.**

**Description**

Compute P-values.

**Usage**

`probBinom(t, size1, size2, c1, c2)`

**Arguments**

- `t` The real value for random variable according to dataset.
- `size1` The sum of Medip-seq real reads of the each CpG site for control and treatment sample.
- `size2` The sum of MRE-seq real reads of the each CpG site for control and treatment sample.
- `c1` The scaling factor for MeDip-seq data.
- `c2` The scaling factor for MRE-seq data.

**Value**

- `p` The P-values for testing the methylation expression levels for each CpG sites.

**Examples**

```r
set.seed(1234)
t <- 0.1
size1 <- sample(1:1000, 1, replace=TRUE)
size2 <- sample(1:1000, 1, replace=TRUE)
c1 <- 1
c2 <- 2
result <- probBinom(t, size1, size2, c1, c2)
```

---

three_mre_cpg

__A simulation dataset of MRE CpG sites."

**Description**

This data set gives 2000 CpG sites which include the chromosome of the region, the start and the stop position of the MRE CpG sites.

**Usage**

`three_mre_cpg`
Format

A data.frame containing 2000 MRE CpG sites.
