Package ‘VennDetail’

May 30, 2024

Type Package

Title A package for visualization and extract details

Version 1.20.0

Author Kai Guo, Brett McGregor

Maintainer Kai Guo <guokai8@gmail.com>

Description A set of functions to generate high-resolution Venn, Vennpie plot, extract and combine details of these subsets with user datasets in data frame is available.

License GPL-2

Encoding UTF-8

LazyData True

Imports utils, grDevices, stats, methods, dplyr, purrr, tibble, magrittr, ggplot2, UpSetR, VennDiagram, grid, futile.logger

Suggests knitr, rmarkdown, testthat, markdown

VignetteBuilder knitr

---

.add_colnames Give first colname as RowNxyz

Description

Give first colname as RowNxyz

Usage

.add_colnames(x)

Arguments

x data frame

Value

return data frame with the first colnames change to "RowNxyz"
.make.table

Description
make table for venndetail modified from make.truth.table (VennDiagram)

Usage
.make.table(x)

Arguments
x A list with input groups

Value
A data frame with logical vector columns and $2^\text{length(x)}-1$ rows.

Author(s)
Kai Guo

detail

Description
Detail function provides a way to display the amount of members in each group

Usage
detail(object)

## S4 method for signature 'Venn'
detail(object)

Arguments
object Venn object

Value
Numeric vector with set names and amounts for each set
Author(s)

Kai Guo

Examples

```r
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
detail(res)
```

Description

The amount of members within each group determined by venndetail will be displayed as a bar plot. This will include all groups such as shared, pairwise, and unique. The order of the figure can be adjusted by the users by using the order argument. The text size argument will allow users to change the size of the numbers above the bars indicating the total number of members within each group.

Usage

```r
dplot(object, order = FALSE, textsize = 5)
```

### S4 method for signature 'Venn'

```r
dplot(object, order = FALSE, textsize = 5)
```

Arguments

- **object**: Venn object
- **order**: Boolean indicating whether to sort the bar (default: FALSE).
- **textsize**: Numeric vector giving the text size above the bar.

Value

Produces a bar plot displaying the total counts within each group

Author(s)

Kai Guo
getFeature provides a way to combine list of user supplied data frames with Venn object

Description
GetFeature allows users to extract subsets from venn object into a table format along with accompanying information from the data frames provided in the rlist argument

Usage
getFeature(object, subset, rlist, userowname = TRUE, gind = NULL, sep = "_", wide = FALSE)
## S4 method for signature 'Venn'
getFeature(object, subset, rlist, userowname = TRUE, gind = NULL, sep = "_", wide = FALSE)

Arguments
- **object**: Venn object
- **subset**: Character vector giving the names of the user-defined subset to extract
- **rlist**: List of user-supplied data frames to combine with venndetail result
- **userowname**: Boolean indicating whether to use row names to join data frames or not (default: TRUE)
- **gind**: Column name or index of each user-supplied data.frame to use to join data frames (valid only when userowname=FALSE)
- **sep**: Character string used to separate the terms when concatenating group names into new separation character for new column names in the resulting data frame
- **wide**: Boolean indicating whether to use wide format (default: FALSE)

Value
data.frame with subsets information and details from the user supplied data frame

Author(s)
Kai Guo
Examples

A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
da <- data.frame(A = A, "FC" = rnorm(40))
db <- data.frame(B = B, "FC" = rnorm(60))
dc <- data.frame(C = C, "FC" = rnorm(40))
res <- venndetail(list(A = A, B = B, C = C))
rhs <- getFeature(res, subset = "Shared", rlist = list(da, db, dc),
                   userowname= FALSE, gind = rep(1, 3))

getSet

getSet function provides a way to extract subsets

Description

getSet function provides a way to extract subsets from venndetail object

Usage

getSet(object, subset = NULL, min = 0, wide = FALSE)

## S4 method for signature 'Venn'
getSet(object, subset = NULL, min = 0, wide = FALSE)

Arguments

object  Venn object
subset  Character vector giving the subset names
min     The minimum number of input groups that a subset must belong to e.g. min = 2
        will only report those subsets with elements shared by 2 or more input groups.
wide    Boolean indicating return wide format (default: FALSE).

Value

Specific subset information

Author(s)

Kai Guo

Examples

A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
getSet(res, "A")
make.subset

Get subset from list of input groups

Description

Get subset from list of input groups

Usage

make.subset(x, sep = "_")

Arguments

x A list with input groups
sep symbol character used when concatenating group names into subset names

Value

A list of subsets. The names on the list are the subset names and the list elements are the subset details.

Author(s)

Kai Guo

Examples

A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
x <- list(A = A, B = B, C = C)
out <- make.subset(x)

merge.Venn

Merge two or more venndetail objects

Description

Merge will combine multiple venn diagrams to allow comparison between multiple groups

Usage

## S3 method for class 'Venn'
merge(x, y, ignore.case = FALSE, useupper = TRUE, plot = FALSE, ...)

Examples

# Not applicable
plot.Venn

Arguments

- `x`: Venn object
- `y`: Venn object
- `ignore.case`: Boolean indicating whether to ignore case of group names (default: FALSE)
- `useupper`: Boolean indicating whether to use uppercases for group names (default: TRUE)
- `plot`: Boolean indicating whether to plot figure or not (default: FALSE)
- ... arguments for `venndetail`

Value

- venn object

Examples

```r
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res1 <- venndetail(list(A = A, B = B))
res2 <- venndetail(list(A = A, C = C))
res <- merge(res1, res2)
```

plot.Venn

Plot Venn object

Description

The plot function allows users to graphically display the groups and overlap between groups in their venn class object through a variety of graph types such as a bar plot, traditional venn, or venn pie chart.

Usage

```r
# S3 method for class 'Venn'
plot(x, type = "venn", col = "black", sep = "_",
     mycol = c("dodgerblue", "goldenrod1", "darkorange1", "seagreen3",
               "orchid3"), cat.cex = 1.5, alpha = 0.5, cex = 2,
     cat.fontface = "bold", margin = 0.05, text.scale = c(1.5, 1.5, 1.5,
               1.5, 1.5, 1.5), filename = NULL, piecolor = NULL,
     revcolor = "lightgrey", any = NULL, show.number = TRUE,
     show.x = TRUE, log = FALSE, base = NULL, percentage = FALSE,
     sets.x.label = "Set Size", mainbar.y.label = "Intersection Size",
     nintersects = 40, abbr = FALSE, abbr.method = "both.sides",
     minlength = 3, ...)
```
Arguments

- **x**: Venn object
- **type**: Use venn, vennpie or upset (default: venn)
- **col**: Character vector giving the color of the circles.
- **sep**: Character string used to separate the terms when concatenating group names into new column names (colnames)(vennpie).
- **mycol**: Character vector giving the filled color for VennDiagram circles.
- **cat.cex**: Numeric vector giving the size of the category names.
- **alpha**: A number giving the transparency value.
- **cex**: A numerical value giving the text size for venndiagram
- **cat.fontface**: A character giving the fontface (font style) for category name.
- **margin**: Number giving the amount of whitespace around the diagram in grid units
- **text.scale**: Numeric vector of text sizes for upset diagram (ylab, yaxis, xlab, subset name, xaxis, insection).
- **filename**: Filename for output figure.
- **piecolor**: Character vector giving the colors of the subsets(vennpie).
- **revcolor**: Character giving the color for the non-selected subsets(vennpie).
- **any**: Number to indicate selected subsets, such as 1 means any unique subsets, 2 means any subsets shared by two groups(vennpie).
- **show.number**: Boolean indicating whether to display the element numbers of the subsets or not (default: TRUE)(vennpie).
- **show.x**: Boolean indicating whether to show subset labels outside the circle (default: TRUE)(vennpie).
- **log**: Boolean indicating whether to transform the data in log scale(vennpie).
- **base**: Base value for log transformation(vennpie).
- **percentage**: Boolean indicating whether to display subset percentages (default: FALSE)(vennpie).
- **sets.x.label**: x-axis label (upset)
- **mainbar.y.label**: y-axis label (upset)
- **nintersects**: Number of intersections to plot. If subset to NA, all intersections will be plotted.
- **abbr**: Boolean indicating whether to abbreviate subset names (default: FALSE).
- **abbr.method**: a character string specifying the method used. Partial matches allowed. (default: both side).
- **minlength**: Minimal length for the subset name.
- **...**: further arguments passed to or from other methods

Value

different type of graphics based on user chose
Author(s)
Kai Guo

Examples

```r
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
plot(res, type = "venn")
```

---

result Extract the result from venn object

Description
Result will return output in a table format including the contents of the subsets included in the venndetail object

Usage
```
result(object, wide = FALSE)
```

## S4 method for signature 'Venn'
```
result(object, wide = FALSE)
```

Arguments

<table>
<thead>
<tr>
<th>object</th>
<th>Venn object</th>
</tr>
</thead>
<tbody>
<tr>
<td>wide</td>
<td>Boolean indicating whether to return wide format (default: FALSE)</td>
</tr>
</tbody>
</table>

Value
return dataframe and print header of dataframe

Author(s)
Kai Guo

Examples
```r
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
result <- result(res)
```
rowjoin

Join data.frame based on rownames

Description

join two dataframes by rownames

Usage

rowjoin(x, y, fun = "fun_join")

## S4 method for signature 'data.frame, data.frame'
rowjoin(x, y, fun = "full_join")

Arguments

x data.frame x
y data.frame y
fun Different join format: left_join, full_join, right_join (default: full_join)

Value
dataframe with join results

Author(s)

Kai Guo

Examples

library(dplyr)
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
dA <- data.frame(A = A, "FC" = rnorm(40))
dB <- data.frame(B = B, "FC" = rnorm(60))
rownames(dA) <- A
rownames(dB) <- B
rowjoin(dA, dB)
**setcolor**  
*return colors with given a vector*

**Description**
Setcolor will provide a list of color vectors based on the number used as an input.

**Usage**
```
setcolor(x)
```

**Arguments**
- `x`  
  Number of color

**Value**
color vector

**Author(s)**
Kai Guo

**Examples**
```
mycol <- setcolor(10)
mycol
```

---

**show Venn**  
*Show the summary of venn object*

**Description**
This function provides a summary of the venn object, including a full results and subsets as well as an summary information.

**Usage**
```
## S4 method for signature 'Venn'
show(object)
```

**Arguments**
- `object`  
  venn object
Value

summary information for the venn object

Author(s)

Kai Guo

Examples

```r
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
show(res)
```

### Description

print the summary information of Venn object

### Usage

```r
## S3 method for class 'Venn'
summary(object, ...)
```

### Arguments

- `object`: Venn object
- `...`: other arguments ignored (for compatibility with generic)

### Value

summary information

### Examples

```r
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
summary(res)
```
Description

T2DM data are differential expression genes (DEGs) with annotation from the publication by Hinder et al. The data contains three DEG sets from three different tissues (Cortex, SCN, Glom). DEGs were determined by using Cuffdiff with a false discovery rate (FDR) < 0.05 between groups with or without pioglitazone treatment.

Usage

T2DM

Format

A list of data frame with five columns individually:

- **Entrez**: Entrez gene IDs
- **Symbol**: HGNC symbols
- **Annotation**: Gene function
- **log2FC**: log2 Fold Change
- **FDR**: False Discovery Rate

Examples

T2DM

Venn-class

Class 'Venn' This class includes all information from venndetail

Description

Class 'Venn' This class includes all information from venndetail

Slots

- **input**: original input datasets
- **raw**: summary of the input datasets
- **sep**: separation character
- **GroupNames**: input group names
- **result**: shared or unique sets
- **detail**: shared of unique number belongs to each sets
- **wide**: result in wide format
venndetail

Author(s)

Kai Guo

venndetail  Extract shared and unique subsets

Description

Extracts shared and unique elements from groups provided to the function. This base function will create a formal class venn object and can also graphically plot the amount of objects in each group. The plot will be in the form of a traditional venn diagram as default. And users can also use vennpie or upset methods to display the result.

Usage

venndetail(x, sep = "_", abbr = FALSE, minlength = 3, abbr.method = "both side")

Arguments

x  A list of variables with group names.
sep symbol character used when concatenating group names into subset names (default: ‘_’).
abbr  Boolean indicating whether to abbreviate subset names (default: FALSE).
minlength  Minimal length for the subset name.
abbr.method a character string specifying the method used. Partial matches allowed. (default: both side).

Details

Extract shared and unique subsets

Value

venn object and figures

Author(s)

Kai Guo

Examples

A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
**Description**

Vennpie uses the venn object and to creates a figure in the form of a venn pie diagram rather than a traditional venn diagram. Users can highlight a specific sections of the venn pie.

**Usage**

```r
vennpie(object, subset = NULL, top = 31, min = 0, color = NULL,
        revcolor = "lightgrey", any = NULL, show.number = TRUE,
        show.x = TRUE, sep = "_", log = FALSE, base = NULL,
        percentage = FALSE)
```

## S4 method for signature 'Venn'

```r
vennpie(object, subset = NULL, top = 31, min = 0,
        color = NULL, revcolor = "lightgrey", any = NULL,
        show.number = TRUE, show.x = TRUE, sep = "_", log = FALSE,
        base = NULL, percentage = FALSE)
```

**Arguments**

- **object**: Venn object
- **subset**: Character vector giving the subset users want to highlight.
- **top**: number of subsets with largest to display (default: 31)
- **min**: The minimum number of input groups that a subset must belong to e.g. min = 2 will only report those subsets with elements shared by 2 or more input groups.
- **color**: Character vector giving the colors of the subsets.
- **revcolor**: Character giving the color for the non-selected subsets.
- **any**: Number to indicate selected subsets, such as 1 means any unique subsets, 2 means any subsets shared by two groups.
- **show.number**: Boolean indicating whether to display the element numbers of the subsets or not (default: TRUE).
- **show.x**: Boolean indicating whether to show subset labels outside the circle (default: TRUE).
- **sep**: Character string used to separate the terms when concatenating group names into new column names (colnames).
- **log**: Boolean indicating whether to transform the data in log scale.
- **base**: Base value for log transformation.
- **percentage**: Boolean indicating whether to display subset percentages (default: FALSE).
Value
vennpie figure

Author(s)
Kai Guo

Examples
A <- sample(1:100, 40, replace = FALSE)
B <- sample(1:100, 60, replace = FALSE)
C <- sample(1:100, 40, replace = FALSE)
res <- venndetail(list(A = A, B = B, C = C))
vennpie(res)
