Package ‘bacon’

May 26, 2019

Type  Package
Title  Controlling bias and inflation in association studies using the empirical null distribution
Version  1.12.0
Author  Maarten van Iterson [aut, cre], Erik van Zwet [ctb]
Maintainer  Maarten van Iterson <mviterson@gmail.com>
Description  Bacon can be used to remove inflation and bias often observed in epigenome- and transcriptome-wide association studies. To this end bacon constructs an empirical null distribution using a Gibbs Sampling algorithm by fitting a three-component normal mixture on z-scores.
License  GPL (>= 2)
Depends  R (>= 3.3), methods, stats, ggplot2, graphics, BiocParallel, ellipse
Suggests  BioCStyle, knitr, rmarkdown, testthat, roxygen2
biocViews  ImmunoOncology, StatisticalMethod, Bayesian, Regression, GenomeWideAssociation, Transcriptomics, RNASeq, MethylationArray, BatchEffect, MultipleComparison
RoxygenNote  6.0.1
VignetteBuilder  knitr
NeedsCompilation  yes

Description

Gibbs Sampler Algorithm to fit a three component normal mixture to z-scores

Usage

```r
bacon(teststatistics = NULL, effectsizes = NULL, standarderrors = NULL, 
niter = 5000L, nburnin = 2000L, nbins = 1000, trim = 0.999, 
level = 0.05, verbose = FALSE, priors = list(sigma = list(alpha = 1.28, 
beta = 0.36), mu = list(lambda = c(0, 3, -3), tau = c(1000, 100, 100)), 
epsilon = list(gamma = c(90, 5, 5))))
```

Arguments

- `teststatistics` numeric vector or matrix of test-statistics
- `effectsizes` numeric vector or matrix of effect-sizes
- `standarderrors` numeric vector or matrix of standard errors
- `niter` number of iterations
- `nburnin` length of the burnin period
- `nbins` default 1000 else bin test-statistics
- `trim` default 0.999 trimming test-statistics
- `level` significance leve used to determine prop. null for starting values
- `verbose` default FALSE
- `priors` list of parameters of for the prior distributions

Value

object of class-Bacon
Bacon-class

Author(s)
mvaniterson

References
Implementation is based on a version from Zhihui Liu https://macsphere.mcmaster.ca/handle/11375/9368

Examples

```r
##simulate some test-statistic from a normal mixture
##and run bacon
y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
bc <- bacon(y)
##extract all estimated mixture parameters
estimates(bc)
##extract inflation
inflation(bc)
##extract bias
bias(bc)
##extract bias and inflation corrected test-statistics
head(tstat(bc))
##inspect the Gibbs Sampling output
traces(bc)
posteriors(bc)
fit(bc)

##simulate multiple sets of test-statistic from a normal mixture
##and run bacon
y <- matrix(rnormmix(10*2000, c(0.9, 0, 1, 0, 4, 1)), ncol=10)
bc <- bacon(y)
##extract all estimated mixture parameters
estimates(bc)
##extract only the inflation
inflation(bc)
##extract only the bias
bias(bc)
##extract bias and inflation corrected P-values
head(pval(bc))
##extract bias and inflation corrected test-statistics
head(tstat(bc))
```

Bacon-class

An S4 class container for storing Gibbs Sampler input and output

Description
An S4 class container for storing Gibbs Sampler input and output
Slots

teststatistics numeric vector or matrix of test-statistics
effectsizes numeric vector or matrix of effect-sizes
standarderrors numeric vector or matrix of standard errors
traces array of Gibbs Sampler traces
estimates vector or matrix of parameter estimates
priors list of parameters of for the prior distributions
niter number of iterations
nburnin length of the burnin period

bias Method to extract the estimated bias from the 'bacon'-object

Description
Method to extract the estimated bias from the 'bacon'-object

Usage
bias(object)

## S4 method for signature 'Bacon'
bias(object)

Arguments

object 'bacon'-object

Value

vector or matrix of inflation

See Also

bacon

Examples

y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
##nbins = 100 to speed up the calculations
bc <- bacon(y, nbins=100)
bias(bc)
dnormmix

**Description**

density of a k-component normal mixture

**Usage**

dnormmix(x, theta)

**Arguments**

- **x**: x like dnorm(x, ...)
- **theta**: parameters of the mixture proportion, mean and sd

**Details**

details follow

**Value**

density of a k-component normal mixture

**Author(s)**

mvaniterson

**Examples**

```r
n <- 2000
theta <- c(0.8, 0, 1, 0, 4, 1)
x <- rnormmix(n, theta)
hist(x, freq=FALSE, n=100)
curve(dnormmix(x, theta), add=TRUE, lwd=2)
```

es

**Method to extract inflation- and bias-corrected effect-sizes**

**Description**

Method to extract inflation- and bias-corrected effect-sizes

**Usage**

es(object, corrected = TRUE)

### S4 method for signature 'Bacon'
es(object, corrected = TRUE)
estimates

Arguments

- `object` 'bacon'-object

- `corrected` optional return uncorrected

Value

vector or matrix of effect-sizes

See Also

bacon

Examples

```r
es <- replicate(6, rnormmix(2000, c(0.9, 0, 1, 0, 4, 1)))
se <- replicate(6, 0.8*sqrt(4/rchisq(2000,df=4)))
bc <- bacon(NULL, es, se)
head(es(bc))
```

```r
estimates <- Method to extract the estimated parameters from the 'bacon'-object
```

Description

Method to extract the estimated parameters from the 'bacon'-object

Usage

```r
estimates(object)
```

Arguments

- `object` 'bacon'-object

Value

vector or matrix of estimates

See Also

bacon

Examples

```r
y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
nbins = 100 to speed up the calculations
bc <- bacon(y, nbins=100)
estimates(bc)
```
**fit**  

*Method to plot mixture fit*

**Description**

Method to plot mixture fit

**Usage**

```r
fit(object, index = 1, ...) 
## S4 method for signature 'Bacon'
fit(object, index, col = "grey75", border = "grey75", ...)
```

**Arguments**

- `object` : 'bacon'-object
- `index` : if multiple sets of test-statistics where provided
- `...` : additional plotting parameters
- `col` : line color default 'grey75'
- `border` : border color 'grey75'

**Value**

plot of the Gibbs Sampler mixture fit

**See Also**

- `bacon`

**Examples**

```r
y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
##nbins = 100 to speed up the calculations
bc <- bacon(y, nbins=100)
fit(bc)
```

---

**inflation**  

*Method to extract the estimated inflation from the 'bacon'-object*

**Description**

Method to extract the estimated inflation from the 'bacon'-object

**Usage**

```r
inflation(object)
## S4 method for signature 'Bacon'
inflation(object)
```
Arguments

object 'bacon'-object

Value

vector or matrix of inflation

See Also

bacon

Examples

```r
y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
nbns = 100 to speed up the calculations
bc <- bacon(y, nbins=100)
inflation(bc)
```
Examples

es <- replicate(6, rnormmix(2000, c(0.9, 0, 1, 0, 4, 1)))
se <- replicate(6, 0.8*sqrt(4/rchisq(2000, df=4)))
bc <- bacon(NULL, es, se)
mbc <- meta(bc)

Description

simple ggplot2 plotting function for 'bacon'-object

Usage

## S4 method for signature 'Bacon'
plot(x, y, type = c("hist", "qq"))

Arguments

x 'bacon'-object
y NULL
type hist or qq

Value

either qq-plot of P-values or histogram of Test-statistics

plotnormmix plot normal mixtures

Description

plot normal mixtures

Usage

plotnormmix(x, theta, ...)

Arguments

x vector of test statistics
theta parameters describing the mixture components
... arguments passed to hist

Details

details follow
Value

return plot with histogram of the data and mixture and individual components

Author(s)

mvaniiterson

Examples

n <- 2000
theta <- c(0.8, 0, 1, 0, 4, 1)
x <- rnormmix(n, theta)
plotnormmix(x, theta)

Description

Method to plot posterior distribution

Usage

posteriors(object, thetas = c("sigma.0", "p.0"), index = 1,
alphas = c(0.95, 0.9, 0.75), xlab = "", ylab = "", ...)

## S4 method for signature 'Bacon'
posteriors(object, thetas = c("sigma.0", "p.0"),
index = 1, alphas = c(0.95, 0.9, 0.75), xlab = "", ylab = "", ...)

Arguments

object 'bacon'-object
thetas which thetas to plot
index if multiple sets of test-statistics where provided
alphas significance level confidence ellipses
xlab optional xlab
ylab optional ylab
... additional plotting parameters

Value

plot of the Gibbs Sampler posterior probabilities

See Also

bacon
**pval**

Examples

```r
y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
# nbins = 100 to speed up the calculations
bc <- bacon(y, nbins=100)
posterior(bc)
```

**pval**  
*Method to extract inflation- and bias-corrected P-values*

Description

Method to extract inflation- and bias-corrected P-values

Usage

```r
pval(object, corrected = TRUE)
```  
```r
# S4 method for signature 'Bacon'
pval(object, corrected = TRUE)
```

Arguments

- `object`  
  `bacon`-object

- `corrected`  
  optional return uncorrected

Value

vector or matrix of P-values

See Also

- `bacon`

Examples

```r
y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
bc <- bacon(y, nbins=100)  # nbins = 100 to speed up the calculations
head(pval(bc))
```
rnormmix  

**Description**  
sample from a normal mixture  

**Usage**  
rnormmix(n, theta, shuffle = TRUE)  

**Arguments**  
  
  n size  
  theta parameters  
  shuffle shuffle return vectors or keep nulls and alternative ordered (null, alts)  

**Details**  
details follow  

**Value**  
n samples from a normal mixture with parameters theta  

**Author(s)**  
mvaniterson  

**Examples**  
n <- 2000  
theta <- c(0.8, 0, 1, 0, 4, 1)  
x <- rnormmix(n, theta)  

---  

se  

**Description**  
Method to extract inflation- and bias-corrected standard errors  

**Usage**  
se(object, corrected = TRUE)  

## S4 method for signature 'Bacon'  
se(object, corrected = TRUE)
Arguments

object 'bacon'-object
corrected optional return uncorrected

Value

vector or matrix of standard-errors

See Also

bacon

Examples

es <- replicate(6, rnormmix(2000, c(0.9, 0, 1, 0, 4, 1)))
se <- replicate(6, 0.8*sqrt(4/rchisq(2000,df=4)))
bca <- bacon(NULL, es, se)
head(se(bca))

description

Extract top features after meta analysis

Usage

topTable(object, number = 10, adjust.method = "bonf", sort.by = c("pval", "eff.size"))

# S4 method for signature 'Bacon'
topTable(object, number = 10, adjust.method = "bonf", sort.by = c("pval", "eff.size"))

Arguments

object 'bacon'-object
number return specified number of top features, n=-1 return all features
adjust.method P-value multiple testing adjustment method default bonferroni
sort.by order results by pval or eff.size

Value

table with top features

See Also

bacon
traces

Method to plot Gibbs sampling traces

Description

Method to plot Gibbs sampling traces

Usage

traces(object, burnin = TRUE, index = 1)

## S4 method for signature 'Bacon'
traces(object, burnin = TRUE, index = 1)

Arguments

object 'bacon'-object
burnin include burnin period default true
index if multiple sets of test-statistics where provided

Value

plot of the Gibbs Sampler traces

See Also

bacon

Examples

y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
##nbins = 100 to speed up the calculations
bc <- bacon(y, nbins=100)
traces(bc)

Examples

es <- replicate(6, rnormmix(2000, c(0.9, 0, 1, 0, 4, 1)))
se <- replicate(6, 0.8*sqrt(4/rchisq(2000,df=4)))
bc <- bacon(NULL, es, se)
mbc <- meta(bc)
topTable(mbc)
tstat

Method to extract inflation- and bias-corrected test-statistics

Description

Method to extract inflation- and bias-corrected test-statistics

Usage

```r
tstat(object, corrected = TRUE)
```

### S4 method for signature 'Bacon'
```r
tstat(object, corrected = TRUE)
```

Arguments

- `object`: 'bacon'-object
- `corrected`: optional return uncorrected

Value

vector or matrix of test-statistics

See Also

- `bacon`

Examples

```r
y <- rnormmix(2000, c(0.9, 0, 1, 0, 4, 1))
nbmis = 100 to speed up the calculations
bc <- bacon(y, nbins=100)
head(tstat(bc))
```
