Title 4way Plots of Differential Expression
Version 1.2.0
Description 4way plots enable a comparison of the logFC values from two contrasts of differential gene expression. The gg4way package creates 4way plots using the ggplot2 framework and supports popular Bioconductor objects. The package also provides information about the correlation between contrasts and significant genes of interest.

*Helper Functions for gg4way*

**Description**
These helper functions provide data used in the plot:
- `getCor`  Get the correlation of the logFC of all genes
- `getShared`  Get only the shared genes that pass the thresholds
- `getTotals`  Get the totals of overlap categories

**Usage**
```r
getCor(p1)
getShared(p1)
getTotals(p1)
```
Arguments

p1 The plot from gg4way

Value

Each function returns a different result:

## Shared
getShared(p1)

## Totals

Description

Create a 4way plot to compare the logFC values from two contrasts of differential gene expression.

Usage

## Default S3 method:

gg4way(
  DGEdata,
  x = NULL,
  y = NULL,
  ID = "ID",
  symbol = "symbol",
  logFC = "logFC",
)
FDR = "adj.P.Val",
sep = " vs ",
FDRcutoff = 0.05,
logFCcutoff = 1,
label = FALSE,
colorVector = c("grey80", "firebrick", "forestgreen", "mediumblue"),

textNudge Numeric specifying nudge of text with gene overlap category totals
...
Support for additional arguments used internally by gg4way.MArrayLM, gg4way.list, and gg4way.DESeqDataSet

Details

When a list of data.frames is provided to the DGEdata argument, they should have the following column names and data:
gg4way

ID Character vector with the feature ID (i.e. EnsemblID)
symbol Optional character vector with gene symbol for labels
LogFC Numeric with the logFC
FDR Numeric with the FDR

The correlation coefficient is useful for comparing across multiple plots. It’s important to consider whether there are any common factors when comparing values, since that can result in a larger value.

Value
A ggplot

Examples

data("airwayFit")
airwayFit |> 
  gg4way(x = "N61311 vs N052611",
          y = "N061011 vs N052611")
