Package ‘muscle’

April 4, 2024

Type Package
Title Multiple Sequence Alignment with MUSCLE
Version 3.44.0
Date 2012-10-05
Author Algorithm by Robert C. Edgar. R port by Alex T. Kalinka.
Maintainer Alex T. Kalinka <alex.t.kalinka@gmail.com>
Description MUSCLE performs multiple sequence alignments of nucleotide or amino acid sequences.

Index 5
Description

MUSCLE performs multiple sequence alignments of nucleotide and amino acid sequences.

Details

Details about the algorithm can be found on the MUSCLE website:
http://www.drive5.com/muscle/

Author(s)

Algorithm: Robert C. Edgar
R port: Alex T. Kalinka <alex.t.kalinka@gmail.com>

References

See Also

muscle, umax

Examples

```r
## Align sequences in an XStringSet object.
## Not run:
aln <- muscle(stringset = umax)
## End(Not run)
```

Usage

`muscle(stringset, quiet = FALSE, ...)`
Arguments

stringset An object of class XStringSet: DNADNAStringSet, RNAStringSet, or AAStringSet.
quiet Logical, whether to prevent printing of the progress of the algorithm to the
screen. Defaults to FALSE.
... Arguments (options and flags) for the MUSCLE algorithm (see Details).

Details

Arguments for the MUSCLE algorithm are either options or flags. Options take a variety of values,
but flags are always logicals (TRUE or FALSE). All options and flags are explained in detail on the

Value

Output is an object of class MultipleAlignment: DNAMultipleAlignment, RNAMultipleAlignment,
or AAMultipleAlignment.

Note

For further details see the MUSCLE website: http://www.drive5.com/muscle/

Author(s)

Algorithm by Robert C. Edgar. Ported into R by Alex T. Kalinka <alex.t.kalinka@gmail.com>

umax

Examples

## Align sequences in an XStringSet object.
aln <- muscle(stringset = umax)

## Switch on the diags flag.
aln <- muscle(stringset = umax, diags = TRUE)
Unaligned MAX sequences

**Description**

Unaligned DNA sequences of the MAX gene for 31 mammalian species.

**Usage**

umax

**Format**

An object of class DNAStringSet.

**Value**

An object of class DNAStringSet.
