Package ‘pcaExplorer’

February 20, 2024

Type Package

Title Interactive Visualization of RNA-seq Data Using a Principal Components Approach

Version 2.28.0

Date 2023-04-28

Description This package provides functionality for interactive visualization of RNA-seq datasets based on Principal Components Analysis. The methods provided allow for quick information extraction and effective data exploration. A Shiny application encapsulates the whole analysis.

correlatePCs

Principal components (cor)relation with experimental covariates

Description
Computes the significance of (cor)relations between PCA scores and the sample experimental covariates, using Kruskal-Wallis test for categorial variables and the cor.test based on Spearman’s correlation for continuous variables.

Usage

```r
 correlatePCs(pcaobj, coldata, pcs = 1:4)
```
distro_expr

Arguments

- `pcaobj` A `prcomp` object
- `coldata` A `data.frame` object containing the experimental covariates
- `pcs` A numeric vector, containing the corresponding PC number

Value

A `data.frame` object with computed p values for each covariate and for each principal component

Examples

```r
library(DESeq2)
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaobj <- prcomp(t(assay(rlt)))
correlatePCs(pcaobj, colData(dds))
```
**geneprofiler**

*Extract and plot the expression profile of genes*

**Description**

Extract and plot the expression profile of genes

**Usage**

```r
geneprofiler(se, genelist = NULL, intgroup = "condition", plotZ = FALSE)
```

**Arguments**

- `se` A `DESeqDataSet` object, or a `DESeqTransform` object.
- `genelist` An array of characters, including the names of the genes of interest of which the profile is to be plotted
- `intgroup` A factor, needs to be in the `colnames` of `colData(se)`
- `plotZ` Logical, whether to plot the scaled expression values. Defaults to `FALSE`

**Value**

A plot of the expression profile for the genes

**Examples**

```r
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
geneprofiler(rlt, paste0("gene", sample(1:1000, 20)))
geneprofiler(rlt, paste0("gene", sample(1:1000, 20)), plotZ = TRUE)
```

**genespca**

*Principal components analysis on the genes*

**Description**

Computes and plots the principal components of the genes, eventually displaying the samples as in a typical biplot visualization.
genespca

Usage

genespca(
  x,
  ntop,
  choices = c(1, 2),
  arrowColors = "steelblue",
  groupNames = "group",
  biplot = TRUE,
  scale = 1,
  pc.biplot = TRUE,
  obs.scale = 1 - scale,
  var.scale = scale,
  groups = NULL,
  ellipse = FALSE,
  ellipse.prob = 0.68,
  labels = NULL,
  labels.size = 3,
  alpha = 1,
  var.axes = TRUE,
  circle = FALSE,
  circle.prob = 0.69,
  varname.size = 4,
  varname.adjust = 1.5,
  varname.abbrev = FALSE,
  returnData = FALSE,
  coordEqual = FALSE,
  scaleArrow = 1,
  useRownamesAsLabels = TRUE,
  point_size = 2,
  annotation = NULL
)

Arguments

x A DESeqTransform object, with data in assay(x), produced for example by either rlog or varianceStabilizingTransformation
ntop Number of top genes to use for principal components, selected by highest row variance
choices Vector of two numeric values, to select on which principal components to plot
arrowColors Vector of character, either as long as the number of the samples, or one single value
groupNames Factor containing the groupings for the input data. Is efficiently chosen as the (interaction of more) factors in the colData for the object provided
biplot Logical, whether to additionally draw the samples labels as in a biplot representation
scale Covariance biplot (scale = 1), form biplot (scale = 0). When scale = 1, the inner product between the variables approximates the covariance and the distance between the points approximates the Mahalanobis distance.

pc.biplot Logical, for compatibility with biplot.princomp()
obs.scale Scale factor to apply to observations
var.scale Scale factor to apply to variables
groups Optional factor variable indicating the groups that the observations belong to. If provided the points will be colored according to groups
ellipse Logical, draw a normal data ellipse for each group
ellipse.prob Size of the ellipse in Normal probability
labels optional Vector of labels for the observations
labels.size Size of the text used for the labels
alpha Alpha transparency value for the points (0 = transparent, 1 = opaque)
var.axes Logical, draw arrows for the variables?
circle Logical, draw a correlation circle? (only applies when prcomp was called with scale = TRUE and when var.scale = 1)
circle.prob Size of the correlation circle in Normal probability
varname.size Size of the text for variable names
varname.adjust Adjustment factor the placement of the variable names, >= 1 means farther from the arrow
varname.abbrev Logical, whether or not to abbreviate the variable names
returnData Logical, if TRUE returns a data.frame for further use, containing the selected principal components for custom plotting
coordEqual Logical, default FALSE, for allowing brushing. If TRUE, plot using equal scale cartesian coordinates
scaleArrow Multiplicative factor, usually >=1, only for visualization purposes, to allow for distinguishing where the variables are plotted
useRownamesAsLabels Logical, if TRUE uses the row names as labels for plotting
point.size Size of the points to be plotted for the observations (genes)
annotation A data.frame object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, gene_name, containing e.g. HGNC-based gene symbols

Details
The implementation of this function is based on the beautiful ggbiplot package developed by Vince Vu, available at https://github.com/vqv/ggbiplot. The adaptation and additional parameters are tailored to display typical genomics data such as the transformed counts of RNA-seq experiments

Value
An object created by ggplot2, which can be assigned and further customized.
get_annotation

Examples

library(DESeq2)
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
rlt <- rlogTransformation(dds)
groups <- colData(dds)$condition
groups <- factor(groups, levels = unique(groups))
cols <- scales::hue_pal()(2)[groups]
genespca(rlt, ntop=100, arrowColors = cols, groupNames = groups)

groups_multi <- interaction(as.data.frame(colData(rlt)[, c("condition", "tissue")]))
groups_multi <- factor(groups_multi, levels = unique(groups_multi))
cols_multi <- scales::hue_pal()(length(levels(groups_multi)))[factor(groups_multi)]
genespca(rlt, ntop = 100, arrowColors = cols_multi, groupNames = groups_multi)

get_annotation

Get an annotation data frame from biomaRt

Description

Get an annotation data frame from biomaRt

Usage

get_annotation(dds, biomart_dataset, idtype)

Arguments

dds
A DESeqDataSet object

biomart_dataset
A biomaRt dataset to use. To see the list, type mart = useMart('ensembl'), followed by listDatasets(mart).

idtype
Character, the ID type of the genes as in the row names of dds, to be used for the call to getBM

Value

A data frame for ready use in pcaExplorer, retrieved from biomaRt.

Examples

library(airway)
data(airway)
airway
dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
colData = colData(airway),
design = ~dex+cell)

## Not run:
get_annotation_orgdb

get_annotation(dds_airway, "hsapiens_gene_ensembl", "ensembl_gene_id")

## End(Not run)

---

**get_annotation_orgdb**  
*Get an annotation data frame from org db packages*

### Description

Get an annotation data frame from org db packages

### Usage

```r
get_annotation_orgdb(dds, orgdb_species, idtype, key_for_genenames = "SYMBOL")
```

### Arguments

- **dds**
  A `DESeqDataSet` object
- **orgdb_species**
  Character string, named as the `org.XX.eg.db` package which should be available in Bioconductor
- **idtype**
  Character, the ID type of the genes as in the row names of `dds`, to be used for the call to `mapIds`
- **key_for_genenames**
  Character, corresponding to the column name for the key in the orgDb package containing the official gene name (often called gene symbol). This parameter defaults to "SYMBOL", but can be adjusted in case the key is not found in the annotation package (e.g. for `org.Sc.sgd.db`).

### Value

A data frame for ready use in `pcaExplorer`, retrieved from the org db packages

### Examples

```r
library(airway)
data(airway)
airway
dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
    colData = colData(airway),
    design = ~dex+cell)
anno_df <- get_annotation_orgdb(dds_airway, "org.Hs.eg.db", "ENSEMBL")
head(anno_df)
```
hi_loadings  

Extract genes with highest loadings

Description

Extract genes with highest loadings

Usage

```r
hi_loadings(
  pcaobj,
  whichpc = 1,
  topN = 10,
  exprTable = NULL,
  annotation = NULL,
  title = "Top/bottom loadings"
)
```

Arguments

- **pcaobj**: A `prcomp` object
- **whichpc**: An integer number, corresponding to the principal component of interest
- **topN**: Integer, number of genes with top and bottom loadings
- **exprTable**: A matrix object, e.g. the counts of a `DESeqDataSet`. If not NULL, returns the counts matrix for the selected genes
- **annotation**: A `data.frame` object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, `gene_name`, containing e.g. HGNC-based gene symbols
- **title**: The title of the plot

Value

A ggplot2 object, or a matrix, if exprTable is not null

Examples

```r
dds <- makeExampleDESeqDataSet_multifac(betaSD = 3, betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaobj <- prcomp(t(SummarizedExperiment::assay(rlt)))
hi_loadings(pcaobj, topN = 20)
hi_loadings(pcaobj, topN = 10, exprTable = dds)
hi_loadings(pcaobj, topN = 10, exprTable = counts(dds))
```
limmaquickpca2go  

Functional interpretation of the principal components, based on simple overrepresentation analysis

Description

Extracts the genes with the highest loadings for each principal component, and performs functional enrichment analysis on them using the simple and quick routine provided by the limma package.

Usage

```r
limmaquickpca2go(
  se,
  pca_ngenes = 10000,
  inputType = "ENSMBL",
  organism = "Mm",
  loadings_ngenes = 500,
  background_genes = NULL,
  scale = FALSE,
  ...
)
```

Arguments

- `se`: A DESeqTransform object, with data in `assay(se)`, produced for example by either `rlog` or `varianceStabilizingTransformation`.
- `pca_ngenes`: Number of genes to use for the PCA.
- `inputType`: Input format type of the gene identifiers. Defaults to `ENSMBL`, that then will be converted to ENTREZ ids. Can assume values such as `ENTREZID`, `GENENAME`, or `SYMBOL`, like it is normally used with the `select` function of `AnnotationDbi`.
- `organism`: Character abbreviation for the species, using `org.XX.eg.db` for annotation.
- `loadings_ngenes`: Number of genes to extract the loadings (in each direction).
- `background_genes`: Which genes to consider as background.
- `scale`: Logical, defaults to `FALSE`, scale values for the PCA.
- `...`: Further parameters to be passed to the goana routine.

Value

A nested list object containing for each principal component the terms enriched in each direction. This object is to be thought in combination with the displaying feature of the main `pcaExplorer` function.
makeExampleDESeqDataSet_multifac

Examples

library(airway)
library(DESeq2)
library(limma)
data(airway)
airway
dds_airway <- DESeqDataSet(airway, design = ~ cell + dex)
## Not run:
rld_airway <- rlogTransformation(dds_airway)
goquick_airway <- limmaquickpca2go(rld_airway,
   pca_ngenes = 10000,
   inputType = "ENSEMBL",
   organism = "Hs")
## End(Not run)

makeExampleDESeqDataSet_multifac

Make a simulated DESeqDataSet for two or more experimental factors

Description

Constructs a simulated dataset of Negative Binomial data from different conditions. The fold changes between the conditions can be adjusted with the betaSD_condition and the betaSD_tissue arguments.

Usage

makeExampleDESeqDataSet_multifac(
  n = 1000,
  m = 12,
  betaSD_condition = 1,
  betaSD_tissue = 3,
  interceptMean = 4,
  interceptSD = 2,
  dispMeanRel = function(x) 4/x + 0.1,
  sizeFactors = rep(1, m)
)

Arguments

n number of rows (genes)
m number of columns (samples)
betaSD_condition the standard deviation for condition betas, i.e. beta ~ N(0,betaSD)
betaSD_tissue the standard deviation for tissue betas, i.e. beta ~ N(0,betaSD)
pair_corr

interceptMean  the mean of the intercept betas (log2 scale)
interceptSD  the standard deviation of the intercept betas (log2 scale)
dispMeanRel  a function specifying the relationship of the dispersions on $2^{\text{trueIntercept}}$
sizeFactors  multiplicative factors for each sample

Details

This function is designed and inspired following the proposal of `makeExampleDESeqDataSet` from the DESeq2 package. Credits are given to Mike Love for the nice initial implementation.

Value

A `DESeqDataSet` with true dispersion, intercept for two factors (condition and tissue) and beta values in the metadata columns. Note that the true betas are provided on the log2 scale.

Examples

```r
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
dds
dds2 <- makeExampleDESeqDataSet_multifac(betaSD_condition = 1, betaSD_tissue = 4)
dds2
```

Pairwise scatter and correlation plot of counts

Description

Pairwise scatter and correlation plot of counts

Usage

```r
pair_corr(df, log = FALSE, method = "pearson", use_subset = TRUE)
```

Arguments

- `df`: A data frame, containing the (raw/normalized/transformed) counts
- `log`: Logical, whether to convert the input values to log2 (with addition of a pseudo-count). Defaults to FALSE.
- `method`: Character string, one of `pearson` (default), `kendall`, or `spearman` as in `cor`.
- `use_subset`: Logical value. If TRUE, only 1000 values per sample will be used to speed up the plotting operations.

Value

A plot with pairwise scatter plots and correlation coefficients.
Examples

```r
library(airway)
data(airway)
airway
dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
          colData = colData(airway),
          design = ~dex+cell)
pair_corr(counts(dds_airway)[1:100, ]) # use just a subset for the example
```

---

**pca2go**

*Functional interpretation of the principal components*

**Description**

Extracts the genes with the highest loadings for each principal component, and performs functional enrichment analysis on them using routines and algorithms from the *topGO* package.

**Usage**

```r
pca2go(
  se,
  pca_ngenes = 10000,
  annotation = NULL,
  inputType = "geneSymbol",
  organism = "Mm",
  ensToGeneSymbol = FALSE,
  loadings_ngenes = 500,
  background_genes = NULL,
  scale = FALSE,
  return_rated_gene_loadings = FALSE,
  annopkg = NULL,
  ...
)
```

**Arguments**

- **se** A `DESeqTransform` object, with data in `assay(se)`, produced for example by either `rlog` or `varianceStabilizingTransformation`
- **pca_ngenes** Number of genes to use for the PCA
- **annotation** A `data.frame` object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, `gene_name`, containing e.g. HGNC-based gene symbols
- **inputType** Input format type of the gene identifiers. Will be used by the routines of `topGO`
- **organism** Character abbreviation for the species, using `org.XX.eg.db` for annotation
- **ensToGeneSymbol** Logical, whether to expect ENSEMBL gene identifiers, to convert to gene symbols with the annotation provided
loadings_ngenes
   Number of genes to extract the loadings (in each direction)

background_genes
   Which genes to consider as background.

scale
   Logical, defaults to FALSE, scale values for the PCA

return_ranked_gene_loadings
   Logical, defaults to FALSE. If TRUE, simply returns a list containing the top
   ranked genes with hi loadings in each PC and in each direction

annopkg
   String containing the name of the organism annotation package. Can be used to
   override the organism parameter, e.g. in case of alternative identifiers used in
   the annotation package (Arabidopsis with TAIR)

... Further parameters to be passed to the topGO routine

Value
   A nested list object containing for each principal component the terms enriched in each direction.
   This object is to be thought in combination with the displaying feature of the main pcaExplorer
   function

Examples

library(airway)
library(DESeq2)
data(airway)
airway
dds_airway <- DESeqDataSet(airway, design= ~ cell + dex)
## Not run:
rld_airway <- rlogTransformation(dds_airway)
# constructing the annotation object
anno_df <- data.frame(gene_id = rownames(dds_airway),
    stringsAsFactors = FALSE)
library("AnnotationDbi")
library("org.Hs.eg.db")
anno_df$gene_name <- mapIds(org.Hs.eg.db,
    keys = anno_df$gene_id,
    column = "SYMBOL",
    keytype = "ENSEMBL",
    multiVals = "first")
rownames(anno_df) <- anno_df$gene_id
bg_ids <- rownames(dds_airway)[rowSums(counts(dds_airway)) > 0]
library(topGO)
pca2go_airway <- pca2go(rld_airway,
    annotation = anno_df,
    organism = "Hs",
    ensToGeneSymbol = TRUE,
    background_genes = bg_ids)

## End(Not run)
**pcaExplorer**

Explore a dataset from a PCA perspective

**Description**

Launch a Shiny App for interactive exploration of a dataset from the perspective of Principal Components Analysis

**Usage**

```r
cpycaExplorer(
  dds = NULL,
  dst = NULL,
  countmatrix = NULL,
  coldata = NULL,
  pca2go = NULL,
  annotation = NULL,
  runLocal = TRUE
)
```

**Arguments**

- **dds**
  - A `DESeqDataSet` object. If not provided, then a `countmatrix` and a `coldata` need to be provided. If none of the above is provided, it is possible to upload the data during the execution of the Shiny App

- **dst**
  - A `DESeqTransform` object. Can be computed from the `dds` object if left NULL. If none is provided, then a `countmatrix` and a `coldata` need to be provided. If none of the above is provided, it is possible to upload the data during the execution of the Shiny App

- **countmatrix**
  - A count matrix, with genes as rows and samples as columns. If not provided, it is possible to upload the data during the execution of the Shiny App

- **coldata**
  - A data.frame containing the info on the covariates of each sample. If not provided, it is possible to upload the data during the execution of the Shiny App

- **pca2go**
  - An object generated by the `pca2go` function, which contains the information on enriched functional categories in the genes that show the top or bottom loadings in each principal component of interest. If not provided, it is possible to compute live during the execution of the Shiny App

- **annotation**
  - A data.frame object, with row.names as gene identifiers (e.g. ENSEMBL ids) and a column, gene_name, containing e.g. HGNC-based gene symbols

- **runLocal**
  - A logical indicating whether the app is to be run locally or remotely on a server, which determines how documentation will be accessed.

**Value**

A Shiny App is launched for interactive data exploration
Examples

```r
library(airway)
data(airway)
airway

dds_airway <- DESeq2::DESeqDataSetFromMatrix(assay(airway),
colData = colData(airway),
design = ~dex+cell)

## Not run:
rld_airway <- DESeq2::rlogTransformation(dds_airway)

pcaExplorer(dds_airway, rld_airway)

pcaExplorer(countmatrix = counts(dds_airway), coldata = colData(dds_airway))

pcaExplorer() # and then upload count matrix, covariate matrix (and eventual annotation)

## End(Not run)
```

Description

pcaExplorer provides functionality for interactive visualization of RNA-seq datasets based on Principal Components Analysis. The methods provided allow for quick information extraction and effective data exploration. A Shiny application encapsulates the whole analysis.

Author(s)

Federico Marini <marinif@uni-mainz.de>, 2016

Maintainer: Federico Marini <marinif@uni-mainz.de>
Sample PCA plot for transformed data

Description

Plots the results of PCA on a 2-dimensional space

Usage

```r
pcaplot(
  x,
  intgroup = "condition",
  ntop = 500,
  returnData = FALSE,
  title = NULL,
  pcX = 1,
  pcY = 2,
  text_labels = TRUE,
  point_size = 3,
  ellipse = TRUE,
  ellipse.prob = 0.95
)
```

Arguments

- `x` A `DESeqTransform` object, with data in `assay(x)`, produced for example by either `rlog` or `varianceStabilizingTransformation`
- `intgroup` Interesting groups: a character vector of names in `colData(x)` to use for grouping
- `ntop` Number of top genes to use for principal components, selected by highest row variance
- `returnData` logical, if TRUE returns a data.frame for further use, containing the selected principal components and intgroup covariates for custom plotting
- `title` The plot title
- `pcX` The principal component to display on the x axis
- `pcY` The principal component to display on the y axis
- `text_labels` Logical, whether to display the labels with the sample identifiers
- `point_size` Integer, the size of the points for the samples
- `ellipse` Logical, whether to display the confidence ellipse for the selected groups
- `ellipse.prob` Numeric, a value in the interval [0;1)

Value

An object created by `ggplot`, which can be assigned and further customized.
Examples

dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaplot(rlt, ntop = 200)

Description

Plots the results of PCA on a 3-dimensional space, interactively

Usage

pcaplot3d(
  x,  # A DESeqTransform object, with data in assay(x), produced for example by either rlog or varianceStabilizingTransformation
  intgroup = "condition",  # Interesting groups: a character vector of names in colData(x) to use for grouping
  ntop = 500,  # Number of top genes to use for principal components, selected by highest row variance
  returnData = FALSE,  # logical, if TRUE returns a data.frame for further use, containing the selected principal components and intgroup covariates for custom plotting
  title = NULL,  # The plot title
  pcX = 1,  # The principal component to display on the x axis
  pcY = 2,  # The principal component to display on the y axis
  pcZ = 3,  # The principal component to display on the z axis
  text_labels = TRUE,  # Logical, whether to display the labels with the sample identifiers
  point_size = 3  # Integer, the size of the points for the samples
)

Arguments

x  # A DESeqTransform object, with data in assay(x), produced for example by either rlog or varianceStabilizingTransformation
intgroup  # Interesting groups: a character vector of names in colData(x) to use for grouping
ntop  # Number of top genes to use for principal components, selected by highest row variance
returnData  # logical, if TRUE returns a data.frame for further use, containing the selected principal components and intgroup covariates for custom plotting
title  # The plot title
pcX  # The principal component to display on the x axis
pcY  # The principal component to display on the y axis
pcZ  # The principal component to display on the z axis
text_labels  # Logical, whether to display the labels with the sample identifiers
point_size  # Integer, the size of the points for the samples
Value

A html-based visualization of the 3d PCA plot

Examples

```r
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaplot3d(rlt, ntop = 200)
```

Description

Produces a scree plot for investigating the proportion of explained variance, or alternatively the cumulative value

Usage

```r
pcascree(obj, type = c("pev", "cev"), pc_nr = NULL, title = NULL)
```

Arguments

- `obj` A `prcomp` object
- `type` Display absolute proportions or cumulative proportion. Possible values: "pev" or "cev"
- `pc_nr` How many principal components to display max
- `title` Title of the plot

Value

An object created by `ggplot`, which can be assigned and further customized.

Examples

```r
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
rlt <- DESeq2::rlogTransformation(dds)
pcaobj <- prcomp(t(SummarizedExperiment::assay(rlt)))
pcascree(pcaobj, type = "pev")
pcascree(pcaobj, type = "cev", title = "Cumulative explained proportion of variance - Test dataset")
```
plotPCcorrs  

Plot significance of (cor)relations of covariates VS principal components

Description

Plots the significance of the (cor)relation of each covariate vs a principal component

Usage

plotPCcorrs(pccors, pc = 1, logp = TRUE)

Arguments

- pccors: A data.frame object generated by correlatePCs
- pc: An integer number, corresponding to the principal component of interest
- logp: Logical, defaults to TRUE, displays the -log10 of the pvalue instead of the p value itself

Value

A base plot object

Examples

library(DESeq2)
dds <- makeExampleDESeqDataSet_multifac(betaSD_condition = 3, betaSD_tissue = 1)
rlt <- rlogTransformation(dds)
pcaobj <- prcomp(t(assay(rlt)))
res <- correlatePCs(pcaobj, colData(dds))
plotPCcorrs(res)

---

topGOtable  

Extract functional terms enriched in the DE genes, based on topGO

Description

A wrapper for extracting functional GO terms enriched in the DE genes, based on the algorithm and the implementation in the topGO package
Usage

topGOtable(
    DEgenes,
    BGgenes,
    ontology = "BP",
    annot = annFUN.org,
    mapping = "org.Mm.eg.db",
    geneID = "symbol",
    topTablerows = 200,
    fullNamesInRows = TRUE,
    addGeneToTerms = TRUE,
    plotGraph = FALSE,
    plotNodes = 10,
    writeOutput = FALSE,
    outputFile = "",
    topGO_method2 = "elim",
    do_padj = FALSE
)

Arguments

DEgenes       A vector of (differentially expressed) genes
BGgenes       A vector of background genes, e.g. all (expressed) genes in the assays
ontology      Which Gene Ontology domain to analyze: BP (Biological Process), MF (Molecular Function), or CC (Cellular Component)
annot         Which function to use for annotating genes to GO terms. Defaults to annFUN.org
mapping       Which org.XX.eg.db to use for annotation - select according to the species
geneID        Which format the genes are provided. Defaults to symbol, could also be entrez or ENSEMBL
topTablerows  How many rows to report before any filtering
fullNamesInRows Logical, whether to display or not the full names for the GO terms
addGeneToTerms Logical, whether to add a column with all genes annotated to each GO term
plotGraph     Logical, if TRUE additionally plots a graph on the identified GO terms
plotNodes     Number of nodes to plot
writeOutput   Logical, if TRUE additionally writes out the result to a file
outputFile    Name of the file the result should be written into
topGO_method2 Character, specifying which of the methods implemented by topGO should be used, in addition to the classic algorithm. Defaults to elim
do_padj       Logical, whether to perform the adjustment on the p-values from the specific topGO method, based on the FDR correction. Defaults to FALSE, since the assumption of independent hypotheses is somewhat violated by the intrinsic DAG-structure of the Gene Ontology Terms
Details

Allowed values assumed by the `topGO_method2` parameter are one of the following: `elim`, `weight`, `weight01`, `lea`, `parentchild`. For more details on this, please refer to the original documentation of the `topGO` package itself.

Value

A table containing the computed GO Terms and related enrichment scores.

Examples

```r
library(airway)
library(DESeq2)
data(airway)
airway
dds_airway <- DESeqDataSet(airway, design = ~ cell + dex)
# Example, performing extraction of enriched functional categories in
# detected significantly expressed genes
## Not run:
dds_airway <- DESeq(dds_airway)
res_airway <- results(dds_airway)
library("AnnotationDbi")
library("org.Hs.eg.db")
res_airway$symbol <- mapIds(org.Hs.eg.db,
    keys = row.names(res_airway),
    column = "SYMBOL",
    keytype = "ENSEMBL",
    multiVals = "first")
res_airway$entrez <- mapIds(org.Hs.eg.db,
    keys = row.names(res_airway),
    column = "ENTREZID",
    keytype = "ENSEMBL",
    multiVals = "first")
resOrdered <- as.data.frame(res_airway[order(res_airway$padj),])
de_df <- resOrdered[is.na(resOrdered$padj) < .05 & !is.na(resOrdered$padj),]
de_symbols <- de_df$symbol
bg_ids <- rownames(dds_airway)[rowSums(counts(dds_airway)) > 0]
bg_symbols <- mapIds(org.Hs.eg.db,
    keys = bg_ids,
    column = "SYMBOL",
    keytype = "ENSEMBL",
    multiVals = "first")
library(topGO)
topgoDE_airway <- topGOtable(de_symbols, bg_symbols,
    ontology = "BP",
    mapping = "org.Hs.eg.db",
    geneID = "symbol")
## End(Not run)
```
