Package ‘phosphonormalizer’

February 26, 2024

Type Package
Title Compensates for the bias introduced by median normalization in
Version 1.26.0
Date 2016-11-11
Description It uses the overlap between enriched and non-enriched
datasets to compensate for the bias introduced in global
phosphorylation after applying median normalization.
biocViews Software, StatisticalMethod, WorkflowStep, Normalization,
Proteomics
License GPL (>= 2)
Imports plyr, stats, graphics, matrixStats, methods
Suggests knitr, rmarkdown, testthat
Enhances MSnbase
Depends R (>= 4.0)
VignetteBuilder knitr
NeedsCompilation no
LazyData true

git_branch RELEASE_3_18
git_last_commit 87d2bf4
git_last_commit_date 2023-10-24
Repository Bioconductor 3.18
Date/Publication 2024-02-25
Author Sohrab Saraei [aut, cre],
Tomii Suomi [ctb],
Otto Kauko [ctb],
Laura Elo [ths]
Maintainer Sohrab Saraei <sohrab.saraei@blueprintgenetics.com>
R topics documented:

enriched.rd .............................................................. 2
non.enriched.rd .......................................................... 3
normalizePhospho ......................................................... 4

Description

A dataset containing sequences, modifications and abundances of about 4000 peptides over 5 samples with 3 technical replicates each.

Usage

enriched.rd

Format

A data frame with 4099 rows and 17 variables, all samples are median normalized:

Sequence  The sequence of the peptide
Modification  The modification and its location
gcNorm.ctrl2.1  Sample: Control 2 Technical Replicate: 1
gcNorm.ctrl2.2  Sample: Control 2 Technical Replicate: 2
gcNorm.ctrl2.3  Sample: Control 2 Technical Replicate: 3
gcNorm.ctrl1.1  Sample: Control 1 Technical Replicate: 1
gcNorm.ctrl1.2  Sample: Control 1 Technical Replicate: 2
gcNorm.ctrl1.3  Sample: Control 1 Technical Replicate: 3
gcNorm.CIP2A.1  Sample: CIP2A Technical Replicate: 1
gcNorm.CIP2A.2  Sample: CIP2A Technical Replicate: 2
gcNorm.CIP2A.3  Sample: CIP2A Technical Replicate: 3
gcNorm.RAS.1  Sample: RAS Technical Replicate: 1
gcNorm.RAS.2  Sample: RAS Technical Replicate: 2
gcNorm.RAS.3  Sample: RAS Technical Replicate: 3
gcNorm.OA.1  Sample: OA Technical Replicate: 1
gcNorm.OA.2  Sample: OA Technical Replicate: 2
gcNorm.OA.3  Sample: OA Technical Replicate: 3 ...

Value

Example Non-enriched dataset
non.enriched.rd

non.enriched.rd Non-enriched dataset

Description

A dataset containing sequences, modifications and abundances of about 17000 peptides measured over 5 samples with 3 technical replicates each.

Usage

non.enriched.rd

Format

A data frame with 16982 rows and 17 variables, all samples are median normalized:

Sequence The sequence of the peptide
Modification The modification and its location
gcNorm.ctrl2.1 Sample: Control 2 Technical Replicate: 1
gcNorm.ctrl2.2 Sample: Control 2 Technical Replicate: 2
gcNorm.ctrl2.3 Sample: Control 2 Technical Replicate: 3
gcNorm.ctrl1.1 Sample: Control 1 Technical Replicate: 1
gcNorm.ctrl1.2 Sample: Control 1 Technical Replicate: 2
gcNorm.ctrl1.3 Sample: Control 1 Technical Replicate: 3
gcNorm.CIP2A.1 Sample: CIP2A Technical Replicate: 1
gcNorm.CIP2A.2 Sample: CIP2A Technical Replicate: 2
gcNorm.CIP2A.3 Sample: CIP2A Technical Replicate: 3
gcNorm.RAS.1 Sample: RAS Technical Replicate: 1
gcNorm.RAS.2 Sample: RAS Technical Replicate: 2
gcNorm.RAS.3 Sample: RAS Technical Replicate: 3
gcNorm.OA.1 Sample: OA Technical Replicate: 1
gcNorm.OA.2 Sample: OA Technical Replicate: 2
gcNorm.OA.3 Sample: OA Technical Replicate: 3 ...

Value

Example Non-enriched dataset

normalizePhospho

Pairwise Normalization of MS-based phosphoproteomic data

Description

This function compensates for the bias introduced in global phosphorylation in the sample after using median normalization.

Usage

normalizePhospho(enriched, non.enriched, phospho = NULL, samplesCols, modseqCols, techRep, plot.fc=NULL)

Arguments

enriched The enriched data with the type data.frame or MSnSet, which should contain the sequence, modification of the sequence with their phosphorylation site and their abundances across samples

non.enriched The non-enriched data with the type data.frame or MSnSet, which should contain the sequence, modification of the sequence with their phosphorylation site and their abundances across samples

phospho a string that shows the term that represents phosphorylation in the modification column of the data. If it is not assigned, "Phospho" will be used as the default value

samplesCols A data.frame with two columns, with the column names enriched and non.enriched, of type numeric or integer, which must contain the column number of samples that hold the abundances

modseqCols A data.frame with two columns, with the names enriched and non.enriched, of type numeric or integer, which must contain the column number of samples that hold the sequence and modifications of the peptides

techRep a factor that holds information about columns order and the technical replicates of the samples

plot.fc This parameter if set plots the fold change distribution before and after pairwise normalization. controls and samples should be set as named vectors in a list (look at the example)

Details

It is shown that global median normalization can introduce bias in the fold change of global phosphorylation between samples. It is suggested that by taking the non-enriched data into consideration, this bias could be compensated (Kauko et al. 2015).

Value

A data.frame with the normalized values and their sequence and modification.
normalizePhospho
