Package ‘pogos’

March 7, 2024

Title PharmacOGenomics Ontology Support

Description Provide simple utilities for querying bhklab PharmacoDB, modeling API outputs, and integrating to cell and compound ontologies.

Version 1.22.0

Author Vince Carey <stvjc@channing.harvard.edu>

Suggests knitr, DT, ontologyPlot, testthat, rmarkdown, BiocStyle

Imports methods, S4Vectors, utils, shiny, ontoProc, ggplot2, graphics

Depends R (>= 3.5.0), jsonlite (>= 0.2.15), httr (>= 1.3.1)

Maintainer VJ Carey <stvjc@channing.harvard.edu>

License Artistic-2.0

LazyLoad yes

LazyData yes

biocViews Pharmacogenomics, PooledScreens, ImmunoOncology

basicDecoder

**Description**

convert binary output of GET()'s content to list

**Usage**

basicDecoder(x)

**Arguments**

x  
string suitable for input to GET as GET(x)

**Value**

output of fromJSON, typically a list

**Examples**

cl = basicDecoder('https://pharmacodb.pmgenomics.ca/api/v1/cell_lines')
unlist(cl)

compoundsByCell

**Description**

initial version of compound browser over pharmacoDb cells

**Usage**

compoundsByCell()

**Value**

only used for side effect of running shiny app
**Note**

Simple shiny app demonstrating coverage of PharmacoDb compounds by CHEBI. If a cell line selected is not present in selected dataset, the app will wait for a compatible selection to be made.

**Examples**

```r
if (!requireNamespace("shiny")) stop("install shiny to use compoundsByCell")
if (interactive()) print(compoundsByCell())
```

---

**Description**

`compounds_v1`: serialization of compounds info from PharmacoDb v1

**Usage**

- `compounds_v1`
- `tissues_v1`
- `cell_lines_v1`
- `datasets_v1`
- `CCLE_drts`

**Format**

S4Vectors DataFrame instance
S4Vectors DataFrame instance
S4Vectors DataFrame instance
S4Vectors DataFrame instance
DRTraceSet instance

**Source**

PharmacoDb Sept 2017
PharmacoDb Sept 2017
PharmacoDb Sept 2017
PharmacoDb Sept 2017
PharmacoDb April 2018
Examples

```r
data(compounds_v1)
head(compounds_v1)
data(tissues_v1)
head(tissues_v1)
data(cell_lines_v1)
head(cell_lines_v1)
data(datasets_v1)
head(datasets_v1)
data(CCLE_drts)
CCLE_drts
```

---

**DRProfile-class**

*DRProfSet is a class for managing dose-response information about cell lines from a pharmacogenomics dataset*

---

**Description**

DRProfSet is a class for managing dose-response information about cell lines from a pharmacogenomics dataset

getDrugs extracts drug list

DRProfSet manages all data from a given cell line from a pharmacogenomics source

**Usage**

```r
getDrugs(x)
```

```r
DRProfSet(cell_line = "MCF7", dataset = "CCLE")
```

```r
## S4 method for signature 'DRProfSet,missing'
plot(x, y, ...)
```

**Arguments**

- `x`: instance of DRProfSet
- `cell_line`: character(1) cell line name, entries in cell_lines_v1
- `dataset`: character(1) resource name, entries in datasets_v1
- `y`: for plot: not used
- `...`: not used

**Value**

- getDrugs: character vector
  - instance of DRProfSet
DRTraceSet-class

DRTraceSet-class

DRTraceSet-class manages dose-response information for a single cell line, multiple drugs

Description

DRTraceSet class manages dose-response information for a single cell line, multiple drugs

DRTraceSet constructor for multiple cell lines, single drug, single dataset

Usage

## S4 method for signature 'DRTraceSet,missing'
plot(x, y, ...)

DRTraceSet(
  cell_lines = c("SK-ES-1", "TC-71", "MHH-ES-1", "HCC-56", "SK-HEP-1"),
  drug = "Irinotecan",
  dataset = "CCLE"
)

Arguments

  x        for plot: instance of DRTraceSet
  y        for plot: not used
  ...      not used
  cell_lines character vector of cell line names, must be found in 'cell_lines_v1' data of pogos package
  drug     character(1) drug name in 'compounds_v1'
  dataset  character(1) dataset known to pharmacodb.pmgenomics.ca

Value

instance of DRTraceSet

Note

Will query pharmacodb for relevant dose-response information

Examples

DRTraceSet()
iriCCLE

obtain an example trace set stored locally, for irinotecan and selected cell lines

Description
obtain an example trace set stored locally, for irinotecan and selected cell lines

Usage
iriCCLE()

Value
an instance of DRTraceSet

Examples
iri = iriCCLE()
iri
plot(iri)

rxdbQuery_v1

very simple query formulation, build queries using endpoints of bhklab PharmacoDB API

Description
very simple query formulation, build queries using endpoints of bhklab PharmacoDB API

Usage
rxdbQuery_v1(
  ..., 
  url = "https://pharmacodb.pmgenomics.ca/api/v1/", 
  decoder = basicDecoder 
)

Arguments
... typically a string representing an API endpoint, will be processed by unlist() and then to paste0 preceded by url
url of a PharmacoDB server API target
decoder a function of one argument that will be applied to API response (typically JSON)
**topEndpoints_v1**

**Value**

typically a list, dependent on decoder parameter

**Examples**

```r
tout = rxdbQuery_v1('cell_lines') # yields 30; append '?all=true' to retrieve all unlist(lapply(qout, function(x) x[[2]]))
```

---

**traces**

**Description**

trace extractor

**Usage**

```r
traces(x)
```

**Arguments**

- **x** instance of DRTraceSet

**Value**

a list of DRProfile instances
Examples

```r
iri = iriCCLE()
str(traces(iri)[[1]])
```

Description

subscripting on DRProfSet extracts a profile for a single drug whose name constitutes the index

Usage

```r
## S4 method for signature 'DRProfSet,character,ANY,ANY'
x[i, j, ..., drop = TRUE]
```

Arguments

- `x`: instance of DRProfSet
- `i`: character(1) drug name
- `j`: not used
- `...`: not used
- `drop`: logical(1) not used

Value

a DRProfSet instance restricted to experiments involving the selected drug
