BSgenome.Mmusculus.UCSC.mm9

January 31, 2024

BSgenome.Mmusculus.UCSC.mm9

Full genome sequences for Mus musculus (UCSC version mm9)

Description

Full genome sequences for Mus musculus (Mouse) as provided by UCSC (mm9, Jul. 2007) and stored in Biostrings objects.

Note

This BSgenome data package was made from the following source data files:

chromFa.tar.gz from http://hgdownload.cse.ucsc.edu/goldenPath/mm9/bigZips/

See ?BSgenomeForge and the BSgenomeForge vignette (vignette("BSgenomeForge")) in the BSgenome software package for how to make a BSgenome data package.

Author(s)

The Bioconductor Dev Team

See Also

- BSgenome objects and the available.genomes function in the BSgenome software package.

Examples

BSgenome.Mmusculus.UCSC.mm9
genome <- BSgenome.Mmusculus.UCSC.mm9
seqlengths(genome)
genome$chr1 # same as genome[["chr1"]]

## Upstream sequences

## Starting with BioC 3.0, the upstream1000, upstream2000, and upstream5000 sequences for mm9 are not included in the BSgenome data package anymore. However they can easily be extracted from the full genome sequences with something like:

library(TxDb.Mmusculus.UCSC.mm9.knownGene)
txdb <- TxDb.Mmusculus.UCSC.mm9.knownGene
gn <- sort(genes(txdb))
up1000 <- flank(gn, width=1000)
up1000seqs <- getSeq(genome, up1000)

## IMPORTANT: Make sure you use a TxDb package (or TranscriptDb object), that contains a gene model based on the exact same reference genome as the BSgenome object you pass to getSeq(). Note that you can make your own custom TranscriptDb object from various annotation resources. See the makeTranscriptDbFromUCSC(), makeTranscriptDbFromBiomart(), and makeTranscriptDbFromGFF() functions in the GenomicFeatures package.

## Genome-wide motif searching

See the GenomeSearching vignette in the BSgenome software for some examples of genome-wide motif searching using Biostrings and the BSgenome data packages:
if (interactive())
vignette("GenomeSearching", package="BSgenome")
