Title Reproduce figures in IHW paper

Version 1.30.0

Description This package conveniently wraps all functions needed to reproduce the figures in the IHW paper (https://www.nature.com/articles/nmeth.3885) and the data analysis in https://rss.onlinelibrary.wiley.com/doi/10.1111/rssb.12411, cf. the arXiv preprint (http://arxiv.org/abs/1701.05179). Thus it is a companion package to the Bioconductor IHW package.

**Arguments**

unadj_p Numeric vector of unadjusted p-values.

filterstat Factor to which different hypotheses belong

alpha Significance level at which to apply method

**Details**

These are closures, which apply IHW with custom prespecified parameters. These correspond to interesting settings, for which it is convenient to be able to immediately call the corresponding functions, rather than having to specify parameters each time. Thus they make it easier to benchmark. All of these wrappers are defined in 2 lines of code, so the settings pertaining to each one can be inspected by typing the functions name into the console.

Value

Another ggplot2 object

This replaces the default legend of a ggplot2 object. In particular, given a ggplot2 object , it removes the existing legend and then places new labels based on the annotation data frame 'last_vals' (see parameter description) at a given x-coordinate of the original plot.

This function can be attributed to and is described in more detail in the following blog post:
Examples

```r
library("ggplot2")
labels <- c("A","B","C")
mypoints <- rbind(data.frame(y=1:3, x=1, label=as.factor(labels)),
  data.frame(y=2:4, x=2, label=as.factor(labels)))
mycolours <- c("#F8766D","#00BA38","#619CFF")

 gg <- ggplot(mypoints,aes(x=x,y=y,color=label)) +
  geom_line(size=2) +
  scale_color_manual(values=mycolours) +
  xlim(c(0,2.2))

 gg

 annotation_df <- data.frame(colour=mycolours, last_vals=2:4, label=labels)
 pretty_legend(gg, annotation_df, 2.1)
```
