Package ‘ObMiTi’

July 4, 2024

Type Package
Title Ob/ob Mice Data on Normal and High Fat Diet
Version 1.12.0
Year 2021
Description The package provide RNA-seq count for 2 strains of mus musculus: Wild type and Ob/Ob. Each strain was divided into two groups, and each group received either chow diet or high fat diet. RNA expression was measured after 20 weeks in 7 tissues.

Description
Title: Ob/ob Mice Data on Normal and High Fat Diet The package provide RNA-seq count for 2 strains of mus musculus; Wild type and Ob/Ob. Each strain was divided into two groups, and each group received either chow diet or high fat diet. RNA expression was measured after 12 weeks in 7 tissues.

Details
The dataset can be accessed through the ExperimentHub as a RangedSummarizedExperiment object contains:

- **assay**  The read counts matrix.
- **colData** The phenotype data of the samples
- **rowRanges** The feature data and annotation of the peaks.
- **metadata** extra details about the sample and associated phenotype studies. This is a data.frame of bibliography information of the studies from which the samples were collected for.

Examples

```r
# load the data object
library(ExperimentHub)

# query package resources on ExperimentHub
eh <- ExperimentHub()
query(eh, "ObMiTi")

# load data from ExperimentHub
ob_counts <- query(eh, "ObMiTi")[[1]]

# print object
ob_counts
```
