Package ‘RnBeads.hg19’

May 28, 2024

Title RnBeads.hg19

Description Automatically generated RnBeads annotation package for the assembly hg19.

Author RnBeadsAnnotationCreator

Maintainer RnBeadsAnnotationCreator <rnbeads@mpi-inf.mpg.de>

Date 2021-11-21

License GPL-3

Version 1.36.0

Depends R (>= 3.0.0), GenomicRanges

Suggests RnBeads

NeedsCompilation no

RoxygenNote 6.0.1

Index 4
Description

Scaffold of annotation tables for HG19. This structure is automatically loaded upon initialization of the annotation, that is, by the first valid call to any of the following functions: `rnb.get.assemblies`, `rnb.get.chromosomes`, `rnb.get.annotation`, `rnb.set.annotation`, `rnb.get.mapping`, `rnb.annotation.size`. Adding an annotation amounts to attaching its table(s) and mapping structures to this scaffold.

Format

list of four elements - "regions", "sites", "controls" and "mappings". These elements are described below.

"regions" list of NULLs; the names of the elements correspond to the built-in region annotation tables. Once the default annotations are loaded, the attribute "builtin" is a logical vector storing, for each region annotation, whether it is the default (built-in) or custom.

"sites" list of NULLs; the names of the elements correspond to the site and probe annotation tables.

"controls" list of NULLs; the names of the elements correspond to the control probe annotation tables. The attribute "sites" is a character vector pointing to the site annotation that encompasses the respective control probes.

"mappings" list of NULLs; the names of the elements correspond to the built-in region annotation tables.

Author(s)

Yassen Assenov

Description

This a a list of all regions available for the annotation.

Usage

regions

Format

list of NULLs; the names of the elements correspond to the built-in region annotation tables. Once the default annotations are loaded, the attribute “builtin” is a logical vector storing, for each region annotation, whether it is the default (built-in) or custom.
Example Data Set

Description
A small example dataset for testing RnBeads' basic functionality.

Usage
data(small.example.object)

Format
RnBeadRawSet-class object with 12 samples and 1,736 sites. It is an example object obtained from Illumina Infinium 450K BeadChip and contains coverage, intensity, and detection p-values.

No preprocessing steps have been performed.

Author(s)
Michael Scherer

sites
Names of the sites

Description
This a a list of all sites available for the annotation.

Usage
sites

Format
list of NULLs; the names of the elements correspond to the site and probe annotation tables.
