Package ‘RnBeads.hg38’

April 4, 2024

Title  RnBeads.hg38
Description  Automatically generated RnBeads annotation package for the assembly hg38.
Author  RnBeadsAnnotationCreator
Maintainer  RnBeadsAnnotationCreator <rnbeads@mpi-inf.mpg.de>
Date  2021-11-21
License  GPL-3
Version  1.34.0
Depends  R (>= 3.0.0), GenomicRanges
Suggests  RnBeads
NeedsCompilation  no
git_url  https://git.bioconductor.org/packages/RnBeads.hg38
git_branch  RELEASE_3_18
git_last_commit  53c8f64
git_last_commit_date  2023-10-24
Repository  Bioconductor 3.18
Date/Publication  2024-04-04

Annotation tables for hg38

Description
Scaffold of annotation tables for the hg38 assembly. This structure is automatically loaded upon initialization of the annotation, that is, by the first valid call to any of the following functions: `rnb.get.assemblies`, `rnb.get.chromosomes`, `rnb.get.annotation`, `rnb.set.annotation`, `rnb.get.mapping`, `rnb.annotation.size`. Adding an annotation amounts to attaching its table(s) and mapping structures to this scaffold.

Format
list of up to six elements - "GENOME", "CHROMOSOMES", "regions", "sites", "controls" and "mappings". These elements are described below.

"GENOME" Name of the Bioconductor package that contains the genomic sequence for this genome assembly.

"CHROMOSOMES" Supported chromosomes for this genome assembly. The elements of this character vector follow the Ensembl convention ("1", "2", ...), and the names of this vector - the convention of the UCSC Genome Browser ("chr1", "chr2", ...).

"regions" list of NULLs; the names of the elements correspond to the built-in region annotation tables. Once the default annotations are loaded, the attribute "builtin" is a logical vector storing, for each region annotation, whether it is the default (built-in) or custom.

"sites" list of NULLs; the names of the elements correspond to the site and probe annotation tables.

"controls" list of NULLs; the names of the elements correspond to the control probe annotation tables. The attribute "sites" is a character vector pointing to the site annotation that encompasses the respective control probes.

"mappings" list of NULLs; the names of the elements correspond to the built-in region annotation tables.
