Package ‘XhybCasneuf’

March 26, 2024

Version 1.40.0
Date 2007-06-21
Title EBI/PSB cross-hybridisation study package
Author Tineke Casneuf <tine@ebi.ac.uk>
Maintainer Tineke Casneuf <tine@ebi.ac.uk>
Depends R (>= 2.4.0), affy, ath1121501cdf, tinesath1cdf, RColorBrewer, methods, grid
Description Cross-hybridisation study on the ATH1 Affymetrix GeneChip
License Artistic-2.0
biocViews ExperimentData, Tissue, MicroarrayData, TissueMicroarrayData
git_url https://git.bioconductor.org/packages/XhybCasneuf
git_branch RELEASE_3_18
git_last_commit f5dabde
git_last_commit_date 2023-10-24
Repository Bioconductor 3.18
Date/Publication 2024-03-26

Index 7
**AffysTissue**

---

### Description

Affymetrix' CDF probe set pairs

### Usage

```r
data(AffysTissue)
data(AffysTissueMC)
data(AffysTissue.noBl)
```

### Format

These three data.frames contain data for Affymetrix’ CDF’s probe set pairs with Q75 \( \geq 55 \). The `pr` and `target` columns hold the names of probe set X and Y, respectively. Column `alSum` contains the Q75 value of the alignment scores of X’s reporters to the transcript of Y. The `meant2hit` and `PSofTarget` columns contain respectively the gene locus the probe set was designed to target and the probe set ID of the off-target Y, according to Affymetrix (extracted from ATH1-121501\_annot.csv). The `peCC` column holds the pairs’ Pearson correlation coefficient calculated on their expression intensities in the Tissue dataset (data originally from AtgenExpress Project).

**AffysTissue** is data.frame that contains all Affymetrix’ CDF’s probe set pairs with Q75 \( \geq 55 \). **AffysTissueMC** holds a subset of the pairs in **AffysTissue**, namely those whose metacorrelation coefficient is not NA are included. For **AffysTissue.noBl**, the pairs of **AffysTissue** that align to each other with BLAST in at least one direction with an E-value smaller than \( 10^{-10} \) were omitted.

CustomsTissue

CustomsTissue  Custom-made CDF's probe set pairs

Description

Custom-made CDF's probe set pairs

Usage

data(CustomsTissue)
data(CustomsTissueMC)
data(CustomsTissue.noBl)

Format

These three data.frames contain data for the custom-made CDF's probe set pairs with Q75 >= 55. The pr and target columns hold the names of probe set X and Y, respectively. Column alSum contains the Q75 value of the alignment scores of X's reporters to the transcript of Y. The peCC column holds the pairs' Pearson correlation coefficient calculated on their expression intensities in the Tissue dataset (data originally from AtgenExpress Project).

CustomsTissue is data.frame that contains all custom-made CDF's probe set pairs with Q75 >= 55. CustomsTissueMC holds a subset of the pairs in CustomsTissue, namely those whose metacorrelation coefficient is not NA are included. For CustomsTissue.noBl, the pairs of CustomsTissue that align to each other with BLAST in at least one direction with an E-value smaller than $10^{-10}$ were omitted.

ex1  Cross-hybridisation example

Description

Cross-hybridisation example

Usage

data(ex1)
data(ex2)
data(ex3)

Format

These objects contain the data of three examples of cross-hybridisation.

Author(s)

Tineke Casneuf <tine@ebi.ac.uk>

References

Casneuf, Van de Peer and Huber. Submitted.

Examples

data(ex1)
data(ex2)
data(ex3)

## see also the vignette

runSimulation  Cross-hybridisation simulation

Description

Cross-hybridisation simulation
XhybExamples-class

Usage

runSimulation()

Format

runSimulation is a function that will run the simulation we ran for our study. By modifying the parameters, users can play with it themselves.

Author(s)

Tineke Casneuf <tine@ebi.ac.uk>

References

Casneuf, Van de Peer and Huber (Submitted).

Examples

runSimulation()

## see also the vignette

XhybExamples-class  

Class "XhybExamples"

Description

Class containing information of cross-hybridisation examples

Objects from the Class

Objects can be created by calls of the form new("XhybExamples", ...).

Slots

X: Object of class "character" contains the ID of probe set X
Y: Object of class "character" contains the ID of probe set Y
IVX: Object of class "numeric" contains the expression intensities of X in the Tissue dataset
IVY: Object of class "numeric" contains the expression intensities of Y in the Tissue dataset
IVXi: Object of class "matrix" contains the expression intensities of X's reporters in the Tissue dataset
ai: Object of class "numeric" contains the alignment scores of X's reporters to Y's transcript sequence
Methods

plotExample signature(ex = "XhybExamples")
